Commission Implementing Regulation (EU) No 1236/2014 of 18 November 2014 concerning the authorisation of L-valine produced by Corynebacterium glutamicum (DSM 25202) as a feed additive for all animal species (Text with EEA relevance)

COMMISSION IMPLEMENTING REGULATION (EU) No 1236/2014

of 18 November 2014

concerning the authorisation of L-valine produced by *Corynebacterium glutamicum* (DSM 25202) as a feed additive for all animal species

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EC) No 1831/2003 of the European Parliament and of the Council of 22 September 2003 on additives for use in animal nutrition[(1)], and in particular Article 9(2) thereof,

Whereas:

(1) Regulation (EC) No 1831/2003 provides for the authorisation of additives for use in animal nutrition and for the grounds and procedures for granting such authorisation.

(2) In accordance with Article 7 of Regulation (EC) No 1831/2003 an application was submitted for the authorisation of L-valine produced by *Corynebacterium glutamicum* (DSM 25202). That application was accompanied by the particulars and documents required under Article 7(3) of Regulation (EC) No 1831/2003.

(3) The application concerns the authorisation of L-valine produced by *Corynebacterium glutamicum* (DSM 25202) as a feed additive for all animal species, to be classified in the additive category ‘nutritional additives’.

(4) The European Food Safety Authority (‘the Authority’) concluded in its opinion of 2 July 2014[(2)] that, under the proposed conditions of use, the L-valine produced by *Corynebacterium glutamicum* (DSM 25202) does not have an adverse effect on animal health, human health or the environment and that it is considered an efficacious source of the essential amino acid L-valine for animal nutrition. The Authority does not consider that there is a need for specific requirements of post-market monitoring. It also verified the report on the method of analysis of the feed additive in feed submitted by the Reference Laboratory set up by Regulation (EC) No 1831/2003.

(5) The assessment of L-valine produced by *Corynebacterium glutamicum* (DSM 25202) shows that the conditions for authorisation, as provided for in Article 5 of Regulation (EC) No 1831/2003, are satisfied. Accordingly, the use of that substance should be authorised as specified in the Annex to this Regulation.

Changes to legislation: *There are currently no known outstanding effects for the Commission Implementing Regulation (EU) No 1236/2014. (See end of Document for details)*

(6) The measures provided for in this Regulation are in accordance with the opinion of the Standing Committee on Plants, Animals, Food and Feed,

HAS ADOPTED THIS REGULATION:

Article 1

Authorisation

The substance specified in the Annex, belonging to the additive category ‘nutritional additives’ and to the functional group ‘amino acids, their salts and analogues’, is authorised as an additive in animal nutrition subject to the conditions laid down in that Annex.

Article 2

Entry into force

This Regulation shall enter into force on the twentieth day following that of its publication in the *Official Journal of the European Union*.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

***Changes to legislation:** There are currently no known outstanding effects for the Commission Implementing Regulation (EU) No 1236/2014. (See end of Document for details)*

ANNEX

Identification number of the additive	**Name of the holder of authorisation**	**Additive**	**Composition, chemical formula, description, analytical method**	**Species or category of animal**	**Maximum age**	**Minimum content**	**Maximum content**	**Other provisions**	**End of period of authorisation**
						mg/kg of complete feed with a moisture content of 12 %			
Category of nutritional additives. Functional group: amino acids, their salts and analogues.									
[F1 3c370]	—	L-valine	*Additive composition* L-valine minimum 98 % (on a dry matter basis). *Characterisation of the active substance* L-valine ((2S)-2-amino-3-methylbutanoic acid) produced by fermentation with *Corynebacterium glutamicum* (DSM 25202). Chemical formula: $C_5H_{11}NO_2$ CAS number: 72-18-4 *Analytical method*[a] For the determination of L-	All species	—			1. The declarations to be made on the labelling of the additive: — moisture content. 2. For user safety: breathing protection, safety glasses and gloves should be worn during handling. F2 3. Where voluntary declaration of the additive is made on the labelling of feed materials and compound feed, the following	9 December 2024
