Commission Regulation (EC) No 1259/2004 of 8 July 2004 concerning the permanent authorisation of certain additives already authorised in feedingstuffs (Text with EEA relevance)

COMMISSION REGULATION (EC) No 1259/2004

of 8 July 2004

concerning the permanent authorisation of certain additives already authorised in feedingstuffs

(Text with EEA relevance)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Community,

Having regard to Council Directive 70/524/EEC of 23 November 1970 concerning additives in feedingstuffs[(1)], as last amended by Regulation (EC) No 1756/2002[(2)], and in particular Articles 3 and 9d(1) thereof,

Whereas:

(1) Directive 70/524/EEC provides that no additive may be put into circulation unless a Community authorisation has been granted.

(2) In the case of additives referred to in part II of Annex C to Directive 70/524/EEC, which includes micro-organisms and enzymes, authorisation without a time limit of an additive already authorised may be given if the conditions laid down in Article 3(a) are satisfied.

(3) The use of the micro-organism preparation of *Enterococcus faecium* (DSM 10663/ NCIMB 10415) was provisionally authorised, for the first time, for chickens for fattening by Commission Regulation (EC) No 1636/1999[(3)].

(4) New data were submitted in support of the application for authorisation without a time limit of this micro-organism.

(5) The assessment of the application for authorisation submitted in respect of this micro-organism, shows that the conditions provided for in Directive 70/524/EEC for authorisation without a time limit are satisfied.

(6) The use of this micro-organism for chickens for fattening, specified in Annex I, should therefore be authorised without a time limit.

(7) The use of the enzyme preparation of endo-1,4-beta-glucanase, endo-1,3(4)-beta-glucanase and endo-1,4-beta-xylanase produced by *Trichoderma longibrachiatum* (ATCC 74 252) was provisionally authorised, for the first time, for chickens for fattening in liquid form by Commission Regulation (EC) No 1436/1998[(4)], and in granular form by Commission Regulation (EC) No 937/2001[(5)].

(8) The use of the enzyme preparation of endo-1,3(4)-beta-glucanase produced by *Aspergillus aculeatus* (CBS 589.94) was provisionally authorised, for the first time, for chickens for fattening by Commission Regulation (EC) No 654/2000[6].

(9) The use of the enzyme preparation endo-1,3(4)-beta-glucanase and endo-1,4-beta-xylanase produced by *Penicillium funiculosum* (IMI SD 101) was provisionally authorised, for the first time, for chickens for fattening by Commission Regulation (EC) No 866/1999[7].

(10) The use of the enzyme preparation endo-1,4-beta-xylanase produced by *Aspergillus niger* (CBS 520.94) was provisionally authorised, for the first time, for chickens for fattening by Commission Regulation (EC) No 1436/1998[8].

(11) The use of the enzyme preparation endo-1,4-beta-xylanase produced by *Bacillus subtilis* (LMG-S 15136) was provisionally authorised, for the first time, for chickens for fattening in solid form by Commission Regulation (EC) No 1353/2000[9] and in liquid form by Commission Regulation (EC) No 2188/2002[10].

(12) New data were submitted in support of the applications for authorisation without a time limit of each of these enzyme preparations.

(13) The assessment of the applications for authorisation submitted in respect of each of these enzyme preparations, shows that the conditions provided for in Directive 70/524/EEC for authorisation without time limit are satisfied.

(14) The use of these enzyme preparations for chickens for fattening under the conditions set out in Annexes II, III, IV, V and VI should therefore be authorised without a time limit.

(15) The assessment of these applications shows that certain procedures should be required to protect workers from exposure to the additives set out in the Annexes. Such protection should be assured by the application of Council Directive 89/391/EEC of 12 June 1989 on the introduction of measures to encourage improvements in the safety and health of workers at work[11], as amended by Regulation (EC) No 1882/2003 of the European Parliament and of the Council[12].

(16) The measures provided for in this Regulation are in accordance with the opinion of the Standing Committee on the Food Chain and Animal Health,

HAS ADOPTED THIS REGULATION:

F1 Article 1

. . . . . .

Textual Amendments

F1 Deleted by Commission Implementing Regulation (EU) 2015/1053 of 1 July 2015 concerning the authorisation of the preparation of Enterococcus faecium DSM 10663/NCIMB 10415 as a feed additive for calves for rearing, piglets, chickens for fattening, turkeys for fattening, cats and dogs and amending Regulations (EC) No 1259/2004, (EC) No 255/2005, (EC) No 1200/2005 and (EC) No 1520/2007 (holder of authorisation Chevita Tierarzneimittel-GmbH) (Text with EEA relevance).

[F2 Article 2

The preparations belonging to the group ‘enzymes’, as set out in Annexes III and VI are authorised for use without a time limit as additive in animal nutrition under the conditions laid down in those Annexes.**]**

Textual Amendments

F2 Substituted by Commission Implementing Regulation (EU) 2017/1145 of 8 June 2017 on the withdrawal from the market of certain feed additives authorised pursuant to Council Directives 70/524/EEC and 82/471/EEC and repealing the obsolete provisions authorising those feed additives (Text with EEA relevance).

Article 3

This Regulation shall enter into force on the third day following that of its publication in the *Official Journal of the European Union.*

This Regulation shall be binding in its entirety and directly applicable in all Member States

***Changes to legislation:** There are currently no known outstanding effects for the Commission Regulation (EC) No 1259/2004. (See end of Document for details)*

[F1]ANNEX I

[F1]

[F3]ANNEX II

Textual Amendments

F3 Deleted by Commission Implementing Regulation (EU) No 403/2013 of 2 May 2013 concerning the authorisation of a preparation of endo-1,4-beta-xylanase, endo-1,3(4)-beta-glucanase and endo-1,4-beta-glucanase produced by Trichoderma reesei (ATCC 74444) as a feed additive for poultry for fattening and for laying and for weaned piglets and amending Regulations (EC) No 1259/2004, (EC) No 1206/2005 and (EC) No 1876/2006 (holder of authorisation DSM Nutritional Products) (Text with EEA relevance).

[F3]

ANNEX III

EC No	Additive	Chemical formula, description	Species or category of animal	Maximum age	Minimum content	Maximum content	Other provisions	End of period of authorisation
					Units of activity/ kg of complete feedingstuff			
Enzymes								
E 1603	Endo-1,3(4)-beta-glucanase EC 3.2.1.6	Preparation of endo-1,3(4)-beta-glucanase produced by *Aspergillus aculeatus* (CBS 589.94) having a minimum activity of:	Chickens for fattening	—	10 FBG	—	1. In the directions for use of the additive and premixture, indicate the storage temperature, storage life, and stability to pelleting	Without a time limit
			coated form:					

a 1 FBG is the amount of enzyme which liberates 1 micromole of reducing sugars (glucose equivalents) from barley beta-glucan per minute at pH 5,0 and 30 °C.
