Guidelines on data collection for national statistics on forest products

Guidelines on data collection for national statistics on forest products

December 2018

Contents

Tables, graphs, figures and boxes	v
Acronyms	vi
Acknowledgements	vii
Preface	ix
CHAPTER 1	
INTRODUCTION	1
CHAPTER 2	
USES AND BENEFITS OF FOREST PRODUCTS STATISTICS	5
2.1. The national level	6
2.2. The international level	7
2.3. Examples of how forest products statistics can be used	9
2.4. Summary	11
CHAPTER 3	
FOREST PRODUCTS STATISTICS	13
3.1. Forest products value chain description	13
3.2. The Joint Forest Sector Questionnaire (JFSQ) framework	15
3.3. Classification systems used in the production of forest products statistics	19
3.5. Summary	21
CHAPTER 4	
FOREST PRODUCTS STATISTICAL DESIGN	23
4.1. Background	23
4.2. Populations and sampling frames	24
4.3. Relevant sampling design and estimators	28
4.4. Other designs and estimation techniques	36
4.5. Sampling intensity	37
4.6. Data collection	39
4.7. Survey timing	41
4.8. Conversion factors	42
4.9. Summary	43
CHAPTER 5	
DATA VALIDATION AND RECONCILIATION	45
5.1. Double counting	45
5.2. Nonresponse	46
5.3. The review process	49
5.4. Summary	51

CHAPTER 6		
DESIGN OF FOREST PRODUCTS INDICATORS		53
6.1. Additional forest products indicators		54
6.2. Summary		57
CHAPTER 7		
POTENTIAL PRESENTATION AND DISSEMINATION FORMATS		59
CHAPTER 8		
CONCLUSIONS		61
REFERENCES		63
ANNEXES		
Annex 1	Joint Forest Sector Questionnaires 1 & 2 products, units and definitions	67
Annex 2	Joint Forest Sector Questionnaire 3 products and definitions	79
Annex 3	Additional forest products classifications	83
Annex 4	Simulated population and example of a stratified design	85
Annex 5	Statistical tables that can be constructed from forest products statistics	91
Annex 6	Example questionnaire for surveying primary mills (excluding pulp mills) in the southern United States of America	95
Annex 7	Example of a questionnaire for surveying mills from The Ministry of Agriculture, Livestock and Fisheries (Uruguay, 2016)	99

Tables, graphs, figures and boxes

TABLES

Table 3.1.	Forest Sector Questionnaire JQ 1: Primary products, removals and production.	17
Table 3.2.	Forest Sector Questionnaire JQ2: Primary products, trade.	18
Table 3.3.	Forest Sector Questionnaire JQ3: Secondary processed products, trade.	19
Table 4.1.	Sources for constructing a forest products sampling frame.	26
Table 4.2.	Suggested items to describe data collection units on a register basis.	27
Table 4.3.	Example of stratified sample of sawmills and veneer mills.	32
Table 4.4.	Coniferous sawnwood domain estimation example under STSI design.	33
Table 4.5.	Simple random sample example for residential woodfuel.	34
Table 5.1.	Example of collapsing strata under unit nonresponse for a stratified simple random sample.	47
Table 5.2.	Example of item nonresponse under stratified simple random sampling.	48
Table 5.3.	National wood fibre balance developed by UNECE and FAO.	50
Table 6.1.	Forest products statistics used to estimate carbon storage in harvested wood products.	56

GRAPHS

Graph 2.1.	Coniferous sawnwood production and trade in the United States from 1961 to 2015.	10
Graph 2.2.	Housing starts index and coniferous sawnwood index (base year=2000) from 1965 to 2015.	10
Graph 4.1.	Histogram of sample residential woodfuel respondents.	35
Graph 4.2.	Percent error by sample size for four simulated populations (N=10, N=20, N=40, N=60) for simple random sample and PPS designs.	38

FIGURES

Figure 3.1.	Forest products flows corresponding to the JFSQ and the new Forest Products Classification proposal.	14
Figure 4.1.	Forest product flows and entities involved.	24
Figure 5.1.	Observed versus predicted production, based on equation (22).	49
Figure 6.2.	Example of a wood material balance.	57

BOXES

Box 2.1.	The IWG's role in forest products statistics.	8
Box 4.1.	Alternative approaches to stratification.	36

Acronyms

CPC	Central Product Classification
EFTA	European Free Trade Association
FAO	Food and Agriculture Organization of the United Nations
GDP	Gross Domestic Product
GSARS	Global Strategy to improve Agricultural and Rural Statistics
HS	Harmonized System Nomenclature
HWP	Harvested Wood Products
IPCC	Intergovernmental Panel on Climate Change
ISIC	International Standard Industrial Classification of All Economic Activities
ITTO	The International Tropical Timber Organization
IWG	Intersecretariat Working Group on Forest Sector Statistics
JFSQ	Joint Forest Sector Questionnaire
MOS	Stratify based on a Measure of Size
NFI	National Forest Inventories
NGO	Non-Governmental Organizations
NSS	National Statistical Systems
OECD	Organization for Economic Co-operation and Development
PPS	Probability Proportional to Size Sampling
SDG	Sustainable Development Goal
SEEA	System of Environmental-Economic Accounting
SFM	Sustainable Forest Management
SI	Simple Random Sampling
SITC	Standard International Trade Classification
SNA	System of National Accounts
STSI	Stratified Simple Random Sampling
SWDS	Solid Waste Disposal Sites
UNECE	United Nations Economic Commission for Europe
UNSC	United Nations Statistical Commission
USDA-FS	United States Department of Agriculture - Forest Service
WFC	World Forestry Congress

Acknowledgments

These Guidelines were developed by John Coulston, Leader of the National Center for Forest Products Survey and Analytics (United States Department of Agriculture, Forest Service USDA-FS), in close collaboration with Flavio Bolliger, former Research Coordinator of the Global Strategy and Monica Madrid Arroyo, the research focal person in the Global Strategy. The author would like to thank all the people who contributed to the different steps of the project: Christophe Duhamel and Arbab Asfandiyar Khan, of the Global Strategy, for their supervision and useful suggestions on how to improve the Guidelines.

Special thanks go to Mats Nordberg, team leader of the Forest Products and Statistics and Arvydas Lebedys, Forestry Officer, both from FAO Forestry Department, for cofunding the project and for their insights and expertise, which greatly assisted the development of these Guidelines. In the same manner, thanks go to Thaís Linhares-Juvenal and Yanshu Li,¹ for developing the research idea, and to Graça Louro for her collaboration at the initial stages.

The Global Strategy wishes to extend its gratitude to Greg Reams, National Program Leader of the USDA-FS Forest Inventory and Analysis Program, for approving the collaboration of its institution in the development of the Guidelines. Valuable inputs and comments were provided by Jeffrey Prestemon, Project Leader, Forest Economics and Policy, and by Grant Domke, Carbon Inventory Lead and head of Timber Products Monitoring for the northern United States of America.

The document has also benefited from comments on the forest products value chain description from Michal Synek, consultant and forestry expert. The Global Strategy extends thanks to the experts involved in the peer review of this document: Arvydas Lebedys (FAO), Arbab Asfandiyar Khan (Global Strategy), Yanshu Li (University of Georgia), Leonardo Boragno and Mariana Boscana (General Forestry Direction of the Ministry of Livestock, Agriculture and Fishery in Uruguay), Alex McCusker (Forestry and Timber Section, Land and Housing Division, United Nations Economic Commission for Europe – UNECE) and Jean-Christophe Claudon (International Tropical Timber Organization – ITTO).

This publication was prepared with the support of the Trust Fund of the Global Strategy, funded by the United Kingdom Department for International Development and the Bill & Melinda Gates Foundation.

Arianna Martella coordinated the design and communication aspects. The document was edited by Sarah Pasetto and formatted by Laura Monopoli.
