

Food and Agriculture Organization of the United Nations

Handbook on crop statistics: improving methods for measuring crop area, production and yield

Publication prepared in the framework of the Global Strategy to improve Agricultural and Rural Statistics

Handbook on crop statistics: improving methods for measuring crop area, production and yield

December 2018

Contents

Tables, figures and boxes	v
Acronyms	vii
Acknowledgements	ix
Preface	xi
CHAPTER 1	
INTRODUCTION	1
CHAPTER 2	
RELEVANCE AND USE OF STATISTICS ON CROP AREA AND PRODUCTION	3
2.1. Uses of crop production statistics	3
2.2. Data sources	6
2.3. Main challenges	9
CHAPTER 3	
SAMPLING AND ESTIMATION METHODS FOR CROP STATISTICS	11
3.1. Establishing the objective of the survey, target population,	
data items to be collected, frequency of collection	12
3.2. Determining a viable sampling strategy	13
3.3. Sample design and estimation for surveys using list frames	21
3.4. Sampling design and estimation for surveys using area frames	25
3.5. Sample design and estimation for surveys using multiple frames	32
CHAPTER 4	
METHODS FOR MEASURING CROP AREA	37
4.1. Methods based on farmer declarations	38
4.2. Methods using land surveying tools	40
4.3. Methods using remote sensing	47
4.4. Comparison of existing methods for measuring crop area	50
CHAPTER 5	
METHODS FOR MEASURING CROP PRODUCTION AND YIELD	53
5.1. Collection of production data through personal interviews	55
5.2. Measuring yield through objective measurements	59
5.3. Other methods for estimating yield and production	63
5.4. Comparison of existing methods for measuring crop production and yield	65
CHAPTER 6	
AREA AND YIELD ESTIMATION UNDER MIXED CROPPING	67
6.1. Estimating crop areas under mixed cropping	69
6.2. Estimating yield and production under mixed cropping	75
6.3. Integrating data collection and estimation methods for mixed crops	
in national agricultural systems	78

CHAPTER 7

METHODS FOR MEASURING CROP PRODUCTION OR YIELD UNDER CONTINUOUSLY HARVESTED ROOT CROPS

7.1.	Challenges in measuring root crop production and yield	83
7.2.	Common methods for measuring root and tuber crop production in surveys	84
7.3.	Key considerations for survey practitioners	88

81

115

CHAPTER 8

ESTIM	ATING AREA AND YIELD OF HORTICULTURAL CROPS	91
8.1.	Types of vegetable and ornamental crops	95
8.2.	Steps to be implemented before data collection	98
8.3.	Methods for data collection	98
8.4.	Estimation of developed area and production	102
8.5.	Examples from selected countries	103
8.6.	Main recommendations to survey practitioners	107

CHAPTER 9

109
109
110
113

REFERENCES

ANNEXES Annex 1 Glossary 127 Annex 2 Country experiences 135 Annex 3: Methods and examples on sampling and estimation 141 Annex 4 The polygon method 154 Annex 5 Measuring distances 158 Annex 6 Crop cutting experiments 161 Annex 7 The crop area, production and yield estimation system in the United States of America 169 Annex 8 Mixed cropping and area apportioning: when to do it? 171 Annex 9 Tables from chapter 7 176 Annex 10 Journal for vegetable crop surveys 179 Annex 11 Model of questionnaires for vegetable crops surveys 186 Annex 12 Crop production section of the AGRIS core module questionnaire 188

Tables, figures and boxes

TABLES

Table 2.1.	Average area and number of parcels per holding, by continent.	10
Table 4.1.	Confusion matrix template.	48
Table 4.2.	Comparison of existing methods for measuring crop area.	51
Table 5.1.	Comparison of existing methods for measuring crop production or yield.	65
Table 6.1	Summarizes the suggested methods for apportioning areas of crop mixture,	
	considering various crop combinations.	75
Table 7.1.	Comparison of existing methods for measuring crop production or yield.	89
Table 8.1.	Comparison of alternative data collection methods for vegetable crops.	102
Table 8.2.	Variables collected to measure the area and the production according	
	to each category of vegetable crops.	105
Table 9.1.	Recommended AGRIS module flow.	111
Table A6.2.	Plot size and shape for some food and non-food crops.	163
Table A8.1	Proportion of plots under mixed stand from a sample of plots selected at national level	
	under the WAAPP baseline survey.	171
Table A9.1.	2014 Cassava production in Zanzibar (kg).	176
Table A9.2.	Selected coefficients from production and yield regression in Malawi.	177
Table A9.3.	Implementation cost estimates (USD) by treatment arm.	178

FIGURES

Figure 2.1.	Stakeholders needing good-quality data on crop area and production.	5
Figure 2.2.	The lack of agricultural surveys and censuses in IDA countries.	7
Figure 3.1.	Point subsampling from a square grid.	27
Figure 3.2.	Sample dots systematically located on a target area defined on a Google Earth imagery.	31
Figure 3.3.	Illustration of multiple frames for agricultural surveys.	33
Figure 4.1.	Questions for farmer assessment of planted area.	38
Figure 4.2.	Subdivision of land into rectangles.	41
Figure 4.3.	Subdivision of land into triangles.	42
Figure 4.4.	Use of GPS devices to measure crop area.	43
Figure 4.5.	Plot outlines obtained using compass and rope (red) and GPS (black).	46
Figure 5.1.	Summary of theoretical crop yield concepts used by sociologists, agronomists,	
	economists and plant pathologists.	54
Figure 5.2.	Crop planted with equal spacing.	57
Figure 5.3.	Illustration of declaration with harvesting units.	62
Figure 6.1.	Examples of mixed stand.	68
Figure 6.2.	Illustration: apportioning of area based on width ratio.	71
Figure 6.3.	Illustration of a farm with two permanent crops: coconuts and cacao.	72
Figure 7.1.	Cassava field in the United Republic fo Tanzania.	94
Figure 8.1.	View of vegetables growing on a family farm in Indonesia.	92
Figure 8.2.	Field of different lettuce varieties in France.	95
Figure 8.3.	Potato field in Peru.	96
Figure A4.1.	Horizontal and vertical projections of a vector.	154
Figure A4.2.	Area determination	155

Figure A4.3.	Methods A, B and C.	156
Figure A4.4.	Method D.	157
Figure A6.1.	Tools and materials needed in the field for conducting CCEs.	162
Figure A6.2.	Regularly shaped field.	163
Figure A6.3.	Irregularly shaped field.	164
Figure A6.4.	Rectangular experiment plot of size 10m x 5m demarcation.	165
Figure A6.5.	Square experiment plot of size 5m x 5m demarcation.	166
Figure A6.6.	Steps involved in crop cutting method.	167

BOXES

Box 2.1.	Using AGRIS to collect data on crop area and production.	8
Box 3.1.	Examples of surveys using area frames that utilize grid to draw PSUs and points to select SSUs.	29
Box 3.2.	Estimating land-use areas using dot sampling – a special case of a point sampling frame.	31
Box 7.1.	Challenges unique to continuously harvested root crops.	83
Box 7.2.	Description of LSMS-ISA methodological experiments in United Republic of Tanzania and Malawi.	86
Box 7.3.	Cost comparisons of the LSMS-ISA methodological experiment conducted in Malawi.	88
Box 8.1.	Relevant concepts and definitions for vegetable crop production statistics.	93
Box 8.2.	Additional items to be surveyed to estimate the area and yield of horticultural crops.	97

Acronyms

ADB	Asian Development Bank
AGRIS	Agricultural Integrated Survey
APS	Agricultural Production Surveys
BOS	Bureau of Statistics
BAS	Bureau of Agricultural Statistics
CA	Census of Agriculture
CAPI	Computer Assisted Personal Interview
CC	Crop Cutting
CCE	Crop Cutting Experiment
CCM	Crop Card Monitor
CES	Crop Estimation Survey
CES-F&V	Crop Estimation Survey of Fruits and Vegetables
CHAMAN	Coordinated Programme on Horticulture Assessment and Management using geoiNformatics
CU	Counting Units
DEFRA	Department of Environment, Food and Rural affairs
DES	Directorate of Economics and Statistics
DESMOA	Directorate of Economics and Statistics, Ministry of Agriculture
EA	Enumeration Area
EPSEM	Equal Probability Selection Method
FAO	Food and Agriculture Organization of the United Nations
GCES	General Crop Estimation Survey
GNSS	Global Navigation Satellite System
GPS	Global Positioning System
GSARS	Global Strategy to improve Agricultural and Rural Statistics
IASRI	Indian Agricultural Statistics Research Institute
IBGE	Instituto Brasileiro de Geografia e Estatística
IDA	International Development Association
ISU-CSSM	lowa State University – Center for Survey Statistics and Methodology
JSAH	June Survey of Agricultural and Horticultural Activities
LBC	Licensed Buying Companies
ISMS	Living Standard Measurement Survey
