# Handbook on remote sensing for agricultural statistics

# **Handbook on remote sensing for agricultural statistics**

# Contents

<b>Acronyms</b>	<b>viii</b>
<b>Tables and figures</b>	<b>x</b>
<b>Recommended citations</b>	<b>xv</b>
<b>Acknowledgments</b>	<b>xvi</b>
<b>Overview</b>	<b>xvii</b>
<b>CHAPTER 1</b>	
<b>DATA ACCESS AND DATA ANALYSIS SOFTWARE</b>	<b>1</b>
1.1. Introduction	1
1.2. Relevant sensors and data sets	2
1.2.1. Cost factors relating to commercial imagery	6
1.2.2. Free and open access	7
1.3. Image processing and preparing for data analytics	8
1.3.1. An example of processing	9
1.4. Reference data	13
1.5. Cloud computing	15
1.6. Case study	16
1.7. Conclusion	19
<b>CHAPTER 2</b>	
<b>LAND COVER MAPPING AND MONITORING</b>	<b>21</b>
2.1. Introduction	21
2.2. The concept of land cover	23
2.2.1. Land Cover Classification Systems (LCCS and LCML)	23
2.2.2. Agriculture in land cover typology	24
2.2.3. Alternative approaches for land characterization	25
2.3. Land cover mapping production	26
2.3.1. Remote sensing data	27
2.3.2. In situ data collection	28
2.3.3. Image processing and map production	35
2.4. Current practices and existing land cover data sets	41
2.4.1. Metadata, data policy and crowdsourcing	42
2.4.2. Comprehensive review of existing land cover and cropland data sets	42
2.4.3. Land cover change detection	44
2.5. Ongoing mapping initiatives at multinational or global scale	46
2.5.1. Global Cropland	46
2.5.2. Sentinel-2 for Agriculture system	47
2.4.3. Irrigated rice mapping	47
2.6. References	50

## CHAPTER 3

<b>USE OF REMOTE SENSING FOR THE DESIGN OF SAMPLING FRAMES</b>	<b>59</b>
3.1. List frames and area frames	60
3.1.1. Stratification	60
3.1.2. Inaccuracies in stratification	60
3.2. Area sampling frames	61
3.2.1. Frames of segments with physical boundaries	61
3.2.2. Frames on regular grids	62
3.2.3. Stratification based on global cropland maps	66
3.2.4. Stratification on more detailed data relating to a previous year	67
3.2.5. Photointerpretation of public domain images and crowdsourcing	68
3.2.6. Area frames of clustered points	70
3.2.7. Area frames of unclustered points	71
3.2.8. Comparing frames of segments with frames of points	73
3.2.9. Area frames of transects	73
3.3. Remote sensing for LSFs	76
3.3.1. The location of a farm: a difficult problem	76
3.3.2. Administrative registers	76
3.3.3. Using EAs as first-stage sampling units	76
3.3.4. Sampling EAs with probability proportional to the area	78
3.3.5. EA stratification	81
3.4. Measuring plots	82
3.5. Sampling satellite images	83
3.5.1. The experiences of the 1970s	83
3.5.2. Sampling medium-resolution images	83
3.5.3. Sampling VHR images	84
3.6. Surveys along roads	85
3.7. References	87

## CHAPTER 4

<b>DETAILED CROP MAPPING USING REMOTE SENSING DATA (CROP DATA LAYERS)</b>	<b>91</b>
4.1. Introduction	91
4.2. Satellite image classification for detailed crop mapping	92
4.2.1. The supervised classification of satellite imagery	92
4.2.2. Pixel-based versus object-based classification	94
4.3. Input data layers required for crop classification	94
4.3.1. Ground ( <i>in situ</i> ) data	94
4.3.2. Earth Observation (EO) Data	96
4.3.3. Ancillary (secondary) data and information	100
4.4. Operational crop mapping at the national scale	101
4.4.1. Moving from the research to the operations domain	101
4.4.2. Agricultural monitoring systems	101
4.4.3. Case Study: Canada's operational space-based Annual Crop Inventory	105
4.5. Conclusion	116
4.6. References	117

## **CHAPTER 5**

### **CROP AREA ESTIMATION WITH REMOTE SENSING**

**131**

<b>5.1.</b> Crop area estimation: introduction	131
<b>5.1.1.</b> LACIE	132
<b>5.2.</b> Approaches to crop area estimation using remote sensing	133
<b>5.2.1.</b> ASF design	133
<b>5.2.2.</b> Single-date data analysis	140
<b>5.2.3.</b> Use of SAR data for crop area estimation	142
<b>5.2.4.</b> Ground truth data	143
<b>5.2.5.</b> Accuracy estimation: confusion matrix and relative deviation	144
<b>5.3.</b> Regression estimator	146
<b>5.4.</b> Calibration estimator	147
<b>5.5.</b> Small area estimator	147
<b>5.6.</b> Examples of national, regional and global crop area estimation programmes	148
<b>5.6.1.</b> National-level programmes	148
<b>5.6.2.</b> Regional programmes	150
<b>5.6.3.</b> Global programmes	151
<b>5.7.</b> Cost-effectiveness of remote-sensing-based area assessment	152
<b>5.8.</b> Issues and limitations	153
<b>5.9.</b> References	155

## **CHAPTER 6**

### **EARLY WARNING SYSTEMS AND CROP YIELD ESTIMATION**

**161**

<b>6.1.</b> Introduction	161
<b>6.2.</b> Early Warning Systems (EWS)	162
<b>6.2.1.</b> Plant pests and diseases	163
<b>6.2.2.</b> The phenology model for monitoring vegetation	164
<b>6.2.3.</b> How early is “early” warning?	165
<b>6.3.</b> Early Warning Early Action	166
<b>6.4.</b> Crop yield forecasting	168
<b>6.4.1.</b> The agrometeorological model	169
<b>6.4.2.</b> The remote sensing model	171
<b>6.5.</b> Conclusion	176
<b>6.6.</b> References	181

## CHAPTER 7

### MONITORING FOREST COVER AND DEFORESTATION 185

7.1. Introduction and main objectives	185
7.2. The use of remote sensing to monitor forest cover – background information	186
7.2.1. Definition of forests, deforestation and degradation	187
7.2.2. Specifications for monitoring deforestation from remote sensing	188
7.2.3. Specifications for monitoring forest degradation from remote sensing	189
7.2.4. Availability of Landsat data	190
7.2.5. Availability of Sentinel-2 data	190
7.3. The FAO Global Forest Resources Assessment's Remote Sensing Survey	192
7.3.1. Background on statistical sampling designed to estimate deforestation from optical sensors having moderate spatial resolution	192
7.3.2. General sample approach selected for the Global Remote Sensing Survey	193
7.3.3. Selection and preprocessing of satellite imagery	194
7.3.4. Processing and analysis of satellite imagery	195
7.3.5. Statistical analysis	196
7.3.6. Accuracy/consistency assessment of estimates of forest cover changes	197
7.3.7. Results for the tropics	197
7.3.8. Precision of the estimates for the tropics	198
7.3.9. Intensification of the sampling scheme for forest cover change estimation at national scale	198
7.3.10. The future of the Global Forest Resources Assessment: towards FRA 2020	199
7.4. Other examples of RSS used for forestry statistics	200
7.4.1. Deforestation statistics from the Global Tree Cover product, University of Maryland	200
7.4.2. Example at national level: the Landscape Units of the Brazilian National Forest Inventory	201
7.4.3. The FAO Global Forest Survey project	204
7.5. Complementarity between estimates of changes in forest and agriculture	208
7.6. References	210

## CHAPTER 8

### ORGANIZATION, RESOURCES AND COMPETENCES FOR ADOPTING REMOTE SENSING IN AGRICULTURAL STATISTICS 217

8.1. Background	217
8.2. Organization	218
8.3. Resources	219
8.3.1. Qualified staff	220
8.3.2. Laboratories: hardware and software requirements	220
8.3.3. Input data	222
8.3.4. Work plan	222
8.3.5. Training requirements	223
8.3.6. Funding	224
8.4. Implementation of the program: case examples	225
8.4.1. Example 1: Ethiopia – application of area frame stratification	225
8.4.2. Example 2: Pakistan – Crop Reporting Services	226
8.4.3. Example 3: Pakistan – the SUPARCO/FAO operative geospatial unit	227
8.4.4. Example 4: Bangladesh – an operational geospatial unit	230
8.4.5. Example 5: Rwanda – multipurpose probability sample surveys	232
8.5. Conclusion	234
8.6. References	235

## CHAPTER 9

### THE COST-EFFECTIVENESS OF REMOTE SENSING IN AGRICULTURAL STATISTICS 237

9.1. The issue of costs	237
9.2. The domains of application and the relative gains	238
9.2.1. Optimization of sampling design	239
9.2.2. Crop Data Layers (CDLs)	241
9.2.3. Improved estimators	241
9.2.4. Crop monitoring and yield forecast	242
9.3. Sensor suitability	243
9.4. Conclusion	245
9.5. References	273

## ANNEX

### ESTIMATING AND CORRECTING THE BIAS OF PIXEL COUNTING 249

A1. Introduction	249
A2. The bias of pixel counting	251
A2.1. Calibration estimators	252
A2.2. Computing the variance of some estimators	254
A2.3. Confusion matrices expressed as numbers of points	253
A2.4. Which approach is best to correct the bias?	254
A3. The problem of subjectivity in pixel counting estimation	255
A4. References	258
