HANDBOOK ON

Master Sampling Frames for Agricultural Statistics

Frame Development, Sample Design and Estimation

Contents

Acronyms Glossary of main technical terms				
			Preface	Preface
Acknow	Acknowledgments			
Overvie	ew .	xxi		
1. Defi	ning the Master Sampling Frame for agricultural statistics – basic principles	1		
1.1.	Introduction	1		
1.2.	Core crop items	3		
1.3.	Core livestock items	5		
1.4. Core socioeconomic data				
1.5. Core land cover items		7		
1.6. Defining a sampling frame				
1.7.	Defining Multiple Frame Sampling	11		
1.8.	The vision for developing the Master Sampling Frame	12		
1.9.	Defining the integrated survey framework	13		
2. Back	ground information required to develop and use the Master Sampling Frame	15		
3. Sam	ple design considerations when developing a Master Sampling Frame	19		
3.1.	Overview	19		
3.2.	Introductory concepts	20		
	3.2.1. The Gambia's national agricultural sample survey	21		
	3.2.2. The US agricultural resource management survey	22		
3.3.	Sampling variability and probability samples	23		
3.4.	Probability sampling designs	26		
	3.4.1. Simple random sampling	26		
	3.4.2. Systematic sampling	26		
	3.4.3. Replicated sampling	27		
	3.4.4. PPS sampling	27		
	3.4.5. Multivariate probability-proportional-to-size (MPPS)	28		
	3.4.6. Cluster sampling	29		
	3.4.7. Two-stage sampling	29		
	3.4.8. Stratified sampling	29		
4.	Summary	31		
4. Guio	lelines on the use of technology for sample frame development	33		
4.1.	Geographic Information Systems (GIS)	33		
	4.2.1. Types of layers in a GIS	33		
	4.2.2. Projections	34		
	4.2.3. Geo-referencing elements in a list frame	34		
	4.2.4. Using GIS-based administrative registers as a basis to define an area sampling frame	35		
	4.2.5. Administrative units:	35		
4.2.	Global Navigation Satellite Systems and Global Positioning Systems	37		

		4.2.1. Using GPS to define a sampling frame	37
		4.2.2. Using GPS to run a survey (field work)	37
	4.3.	Remote sensing	39
		4.3.1. Main types of satellite images	39
		4.3.2. Aerial photographs	40
	5.	Summary	41
5.	Using	g list frames to build and use Master Sampling Frames	43
	5.1.	Introduction	43
	5.2.	Using list frames to build master sampling frames	46
		5.2.1. Using population census data to build Master Sampling Frames	46
		5.2.2. Using agricultural censuses to build Master Sampling Frames	51
		5.2.3. Using business registers of farms to build a Master Sampling Frames	52
		5.2.4. Characteristics of list frames	54
	5.3.	Main issues arising from the use of list frames to build MSF frames and how to address them	57
		5.3.1. Advantages and disadvantages of list frames	57
		5.3.2. Association between frame units and population units	58
		5.3.3. Inferences made from list frames exhibiting multiplicity.	60
		5.3.4. Dealing with imperfections in list frames	61
		5.3.5. Non-sampling errors in list frames	63
	5.4.	Maintaining and updating list frames	64
6 .	Guid	elines on developing and using an area sampling frame	67
	6.1.	Area sampling frames: general concept and main types.	67
	6.2.	Types of units in an area sampling frame	69
		6.2.1. Segments	69
		6.2.2. Points	71
		6.2.3. Transects	74
	6.3.	Tools to improve the sampling efficiency	76
		6.3.1. Stratification	76
		6.3.2. Single- and multi-stage sampling	77
		6.3.3. Multi-phase sampling	77
	0.4	6.3.4. Systematic sampling	/8
	6.4.	Observation/reporting mode	/9
		6.4.1. Direct observations	/9
	<u>с</u> г	6.4.2. Sampling farms using an area frame	80
	6.5. C.C	Non-sampling errors in an area sampling frame	8/
	6.6.	Linking area frames with census or administrative information: the use of enumeration areas	88
7.	Mult	iple Frame Sampling	89
	7.1.		89
	7.2.	Principles of Multiple Frame Sampling	91
	7.3.	Problems in the application of Multiple Frame Surveys	94
	7.4. 7 -	Estimation of domain parameters	96
	<i>1</i> .5.	Dual frame estimator	98
		7.5.1. Hartley and the screening estimator	98
		7.5.2. The Fuller-Burmeister estimator	99
		7.5.3. The Skinner-Kao estimator	100
		7.5.4. Single trame-type estimator	102

8. 9. 10.	7.5.5. Choosing among dual-frame estimatorsUsing auxiliary informationAllocation of sample size to framesScope and coverage of the list frame	102 103 104 106			
8. Summary and general guidelines on implementing a Master Sampling Frame 107

TABLES					
1.1:	Review of sampling frames	8			
1.2:	Integrated sample design	14			
3.1:	Effect of correlation between item and measure of size, and the number of strata, on the relative				
	efficiency of stratified sampling	30			
5.1:	Types of area and list frames suitable for agricultural surveys	44			
6.1:	Observations generated by points sampled in the segment of Figure 6.13	83			
FIGURE	S				
3.1:	Illustration of the concept of sampling error.	23			
3.2:	Examples of non-sampling errors	24			
5.1:	Schemes of the four types of associations.	58			
6.1:	Example of a segment, in Rwanda, with a large number of fields.	69			
6.2:	PSU subdivided into several segments (USA)	70			
6.3:	Example of PSU with physical boundaries in Italy, with segments delineated within and the	70			
64.	Building an area frame with regular cells only requires definition of a regular grid	70			
0.4. 6 5.	Example of second-stage sampling: a grid of points is sampled inside a gauare segment	/ 1			
0.0.	(first-stage sampling unit)	70			
66.	Two-phase sample of points with incomplete stratification	72 70			
6.0.	Example of a sample of strings in Sudan	73			
0.7. 6 Q.	Aerial photo in which nomadic livestock can be counted	74 77			
0.0.	הפחמר פחטנט ווד שיחוטרו חטרוזמעוט וועפסנטטג טמון של טטעוונפע	74			

6.9:	In landscapes with thin stripes, transects can be used for crop area estimation	75
6.10:	Example of a square segment on a land cover map (blue lines)	77
6.11:	Example of agricultural landscape with some farm headquarters	81
6.12:	Tracts inside a square segment	82
6.13:	Sampling farms (tracts) inside a square segment	84
6.14:	Sampling farms by points	85
6.15:	Example of an "extended segment"	87
7.1:	Two overlapping frames that form three domains in a general dual-frame design.	91
7.2:	Area and list frames forming two domains in agricultural dual-frame designs	92
7.3:	Three overlapping frames forming seven domains in a multiple frame design	96

Acronyms

AFS	Area Frame Sampling
AGRIS	Agriculture Integrated Survey
AgRISTARS	Agriculture and Resources Inventory Surveys through Aerospace Remote Sensing
CAPI	Computer-Assisted Personal Interview
CASI	Computer-Assisted Self Interviewing
CATI	Computer-Assisted Telephone Interview
CEAG	Census of Agriculture
EA	Enumeration Area
EU	European Union
FAO	Food and Agriculture Organization of the United Nations
GCES	General Crop Estimation Surveys
GHG	Greenhouse Gas
GHS	General Household Survey
GIS	Geographical Information Systems
GNSS	Global Navigation Satellite System
GPS	Global Positioning System
ha	Hectare
HS	Harmonized Commodity Description and Coding System
ICC	Indicative Crop Classification
IFPRI	International Food Policy Research Institute
IHSN	International Household Survey Network
IIA	International Institute of Agriculture
ILO	International Labour Organization
ISIC	International Standard Industrial Classification of All Economic Activities
JAS	June Agricultural Survey (NASS/USDA)
JES	June Enumerative Survey (NASS/USDA)
LACIE	Large Area Crop Inventory Experiment
LF	List Frame
LUCAS	Land Use/Cover Area-frame Survey
LSMS	Living Standards Measurement Survey
LU	Land Use
MDG	Millennium Development Goal
