**This study draws on collaborative work done by UNCTAD and the Palestinian Shippers' Council in the context of the UNCTAD project entitled "Capacity Development for Facilitating Palestinian Trade".*

Executive Summary

Following the Israeli occupation of the West Bank (WB) and the Gaza Strip (GS) in 1967, the economy of the occupied Palestinian territory (OPT) became predominantly dependent on the much larger Israeli economy. The 1994 Paris Protocol, signed between the Palestine Liberation Organization (PLO) and the Government of Israel (GoI), attempted, at least theoretically, to remedy some aspects of the asymmetrical relations between the two economies, and to expand Palestinian external trade. However, the OPT's dependency on Israel further deepened in subsequent years and Israeli ports continued to be the major gateways used by Palestinian shippers (exporters and importers). Two factors explain the OPT's heavy dependency on Israeli ports: a) the limited, or almost no, access of Palestinian trade to regional port facilities in Egypt and Jordan; and b) the easiness of the clearance facilities available to Israeli agents who handle a significant amount of Palestinian imports, since Palestinian clearance agents have no access to Israeli port facilities.

Following the second Palestinian *Intifada* of September 2000, Palestinian shippers were confronted with a myriad of new problems associated with importing and exporting goods. This study identifies the major Israeli procedures and hurdles that face Palestinian shippers at the Israeli ports of Haifa, Ashdod and the King Hussein Bridge (KHB). Many trade impediments are common to the three gateways; including stringent security procedures and physical barriers, unilateral Israeli control over all gateways, movement restrictions imposed on the Palestinian people and goods, the back-to-back system, lack of information and resources, inadequate infrastructure, and limited working hours. The study also highlights the Israeli policies that are specific to each gateway.

As a result of Israeli procedures, Palestinian shippers, who are subjected to discriminatory treatment, bear additional direct and indirect costs; leading to higher transaction costs and thus the final cost of production and distribution (World Bank, 2008c). Ultimately, the competitiveness of Palestinian exportable and importable goods in the domestic as well as the global marketplace erodes while the cost of imported inputs and consumer goods escalates.

Despite the fact that Israeli procedures and trade impediments hamper efforts to create tangible changes on the ground, the study argues that a number of measures, if implemented, could boost Palestinian trade and revitalize the economy in the short term. Hence, this paper also identifies and critically examines some of these measures.

One possibility, among many, is to seek and use donor aid to mitigate the constraints of the occupation. For instance, the improvement of trade conditions at KHB, including the need to process containerized shipments, would be a key element in facilitating Palestinian trade. In this regard, the introduction of the gantry scanner that was proposed by the Government of Netherlands (GoN) at KHB could boost Palestinian trade. For Palestinian shippers, the gantry scanner is intended to encourage the efficient movement of goods by eliminating the back-to-back process for moving goods (a costly, tedious process of unloading and reloading pallets for manual inspection), reducing damage to goods, allowing for the effective transportation of refrigerated and perishable items, enabling better packing of shipments in terms of the diversity and quantity of goods, and reducing transportation time and other costs.

Abbreviations

ECF	Economic Cooperation Foundation
GoI	Government of Israel
GoN	Government of the Netherlands
IAA	Israeli Airport Authority
JEC	Joint Economic Committee
KHB	King Hussein (Allenby) Bridge
OCHA	Office for the Coordination of Humanitarian Affairs
OPT	occupied Palestinian territories
OQR	Office of the Quartet Representative
PNA	Palestinian National Authority
PCBS	Palestinian Central Bureau of Statistics
PLO	Palestine Liberation Organization
PSC	Palestinian Shippers' Council
UNCTAD	United Nations Conference on Trade and Development
WB	West Bank

Table of Contents

Executive Summary	i
Abbreviations.....	ii
Table of Contents	iii
I. Introduction.....	1
II. Historical overview of Palestinian trade	3
A.Pre-Oslo Trade regime	3
B.Post-Oslo Trade regime: Paris Protocol	4
C.The Ports of Haifa, Ashdod and the King Hussein Bridge	5
III. Constraints on the Movement of Palestinian International Trade	8
A.Lack of Palestinian control over all gateways.....	8
B.Movement restrictions on Palestinian people and goods	8
C.Trade obstacles specific to the ports of Haifa and Ashdod	13
D.Restrictive trade measures specific to the King Hussein Bridge	15
E.Common restrictive trade measures	17
IV. Assessment of the direct and indirect costs of Israeli restrictions on Palestinian trade.....	18
A.Assessment of the direct costs at the ports of Haifa and Ashdod	18
B.Indirect costs at the ports of Haifa and Ashdod	20
C.Assessment of the costs at the KHB.....	20
V. Gantry X-Ray container scanner at the King Hussein Bridge Crossing	23
A.The container scanner and facilitating Palestinian trade at KHB.....	23
B.Continued restrictions with the container scanner at the KHB	28
VI. Conclusion and Recommendations for Facilitating Palestinian Trade	30
A.Measures to enhance efficiency and capacity of Palestinian shippers	30
B.Recommendations related to the KHB crossing and the container scanner.....	32
C.Recommendations for the Private Sector and the PNA	33
