Towards an African nanotechnology future

Trends, impacts and opportunities

CONTENTS

Chapter 1.

Africa in the global nanotechnology development: current PerformanceX

1.	Introduction	1
2.	Nanotechnology concepts and definitions	2
3.	Current state of nanotechnology	4
3.1.	A growing research base	4
3.2.	Nanotechnology inventions	6
3.3.	Standards as indicators for nanotechnology readiness	7
3.4.	An emerging nanotechnology industrial base	9
3.5.	Some observations	10
4.	Nanotechnology and the Sustainable Development Goals	11
5.	Towards an African nanotechnology innovation system to achieve Sustainable Development Goals	14
5.1.	Institutional arrangements for nanotechnology development	15
5.2.	Human capital development.....	16
5.3.	Research infrastructure	16
5.4.	Funding regional research.....	16
5.5.	Governance of nanotechnology innovation systems.....	17
5.6.	Leveraging regional and global resources	17
6.	Conclusion.....	18

Chapter 2.

Nanotechnology for African development: Challenges and opportunities 19

1.	Introduction	20
2.	Applications of nanotechnology in developing countries	20
3.	The state of nanotechnology in selected African countries	22
4.	Challenges in the exploitation of nanotechnology	24
5.	Challenges in assessing the impact of nanotechnology.....	25
6.	The way forward	26

Chapter 3.

Regulatory, societal, developmental and sustainability issues of nanotechnology: An overview..... 27

1.	Introduction	28
2.	The Rise and Rise of Nanotechnology.....	28
2.1.	The four stages of nano-development.....	31
3.	The Regulation of Nanotechnology	32
3.1.	Hands-off approach.....	34
3.2.	Prohibition, moratorium and the “grey goo” scenario	35
3.3.	Status quo versus regulatory overhaul	36
3.4.	Self-regulation and the transition from regulation to governance	38
4.	From regulation to governance	40

4.1. National versus international regulation	41
5. How to regulate? The precautionary principle	42
5.1. Alternatives to the precautionary principle.....	44
6. Societal issues and regulation	45
7. Conclusion.....	46

Chapter 4.

Nanotechnology research and innovation in South Africa..... 47

1. Introduction.....	48
2. Nanotech ethics and a code of conduct	48
3. Public awareness-raising initiatives by the South African Nanotechnology Initiative and the South African Agency for Science and Technology Advancement	49
4. Human capital development for nanoscientists	50
5. Increasing the availability of high through-put nanotechnology instruments	50
6. Flagship project funding	51
7. Research innovation networks	51
8. Lessons learned from the Republic of Korea	51

Chapter 5.

Developing a nanotechnology research and innovation base: The experience of Mauritius and the creation of an African nanotechnology alliance 52

1. Building a national nanotechnology knowledge base and promoting nanotechnology research and development.....	53
1.1. Strengthening regional and international collaboration	53
1.2. Creation of a joint regional research and innovation platform with Reunion	53
1.3. Contribution of the Centre to national development	53
1.4. Support provided by the European Union	54
1.5. Business opportunities	54
2. The wider African context	55
3. Nanotechnology and the promotion of sustained development in developing countries.....	56
References	57
Annex I. List of Participants for Nano-Tech Expert group meeting, Nov 13-14, 2018.....	62

List of tables

Table 1. Number of nanotechnology standards established by selected developing and developed countries since 2013.....	8
Table 2. Research articles in various fields as a percentage of all research articles published.....	10
Table 3. Assessment of technology and business opportunities.....	11
Table 4. Top 10 applications of nanotechnology in developing countries.....	12
Table 5. Nanotechnology for the green economy.....	18
Table 6. Applications of nanotechnology in developing countries	21

List of Figures

Figure I. Nanotechnology articles indexed by Web of Science.....	5
Figure II. Nanotechnology articles published by the top 10 African countries	6
Figure III. Patent applications (USPTO plus EPO): top countries	7
Figure IV. Patent applications by selected African countries (total, 2001-2017)	7
Figure V. Technology supply and demand	12
Figure VI. Main areas in which patents are filed (as a percentage of the total number of patents filed)	13
Figure VII. Nanotechnology-related patents issued by United States Patent and Trademark Office	30

List of boxes

Box 1. The Proposed OECD single and list-based statistical definitions of nanotechnology	4
--	---

NOTE

The term “country” as used in this publication also refers, as appropriate, to territories and areas. The designations used and the presentation of the material do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries.

In addition, the designations of country groups are intended solely for statistical or analytical convenience, and do not necessarily express a judgement about the stage of development reached by a particular country or stages in the development process. The mention of any firm, organization or policies does not imply their endorsement by the United Nations.

The use of the symbol “\$” or “US\$” refers to United States dollars, unless stated otherwise. Its use is primarily intended for statistical or analytical convenience, and does not imply its use in the country, territory or region.

The definitions of the terms “nanotechnology”, “nanodevices”, “nanomaterials” and any combination that include “nano” as used in the publication are intended solely for statistical or analytical convenience and do not necessarily express a judgement or imply endorsement by the United Nations of the adequacy or accuracy of the definitions. Similarly, the groupings and categories of any “nano” products or processes are designed to permit comparison and are not necessarily legal or statistical groups.

The term “innovation” is used to refer to the application of knowledge in product, process, design, market and organizational improvements that are new, not necessarily to the world but to the region, country, centre, firm and/or individual. Unless otherwise stated, it may not include “policy innovations” or entrepreneurship in general.

The terms “number”, “proportion” and “percentage” refer only to the total number of items or entities available in the database and may not be complete representation of the country. Therefore, a statement such as “ten percent of the nanotechnology patents” refers, not to the national average of patents of the country, but to those assigned to the country in a given database. It does not indicate an endorsement on the part of the United Nations of the mentioned database or a verification of its accuracy.

The material contained in this publication may be freely quoted with an appropriate acknowledgement.
