# UNITED NATIONS ECONOMIC COMMISSION FOR EUROPE

The United Nations Economic Commission for Europe (UNECE) is one of the five United Nations regional commissions, administered by the Economic and Social Council (ECOSOC). It was established in 1947 with the mandate to help rebuild post-war Europe, develop economic activity and strengthen economic relations among European countries, and between Europe and the rest of the world. During the Cold War, UNECE served as a unique forum for economic dialogue and cooperation between East and West. Despite the complexity of this period, significant achievements were made, with consensus reached on numerous harmonization and standardization agreements.

In the post-Cold War era, UNECE acquired not only many new member States, but also new functions. Since the early 1990s the organization has focused on assisting the countries of Central and Eastern Europe, Caucasus and Central Asia with their transition process and their integration into the global economy.

Today, UNECE supports its 56 member States in Europe, Central Asia and North America in the implementation of the 2030 Agenda for Sustainable Development with its Sustainable Development Goals (SDGs). UNECE provides a multilateral platform for policy dialogue, the development of international legal instruments, norms and standards, the exchange of best practices and economic and technical expertise, as well as technical cooperation for countries with economies in transition.

Offering practical tools to improve people's everyday lives in the areas of environment, transport, trade, statistics, energy, forestry, housing, and land management, many of the norms, standards and conventions developed in UNECE are used worldwide, and a number of countries from outside the region participate in UNECE's work.

UNECE's multisectoral approach helps countries to tackle the interconnected challenges of sustainable development in an integrated manner, with a transboundary focus that helps devise solutions to shared challenges. With its unique convening power, UNECE fosters cooperation among all stakeholders at the country and regional levels.

### *Transport in UNECE*

The UNECE Sustainable Transport Division is the secretariat of the Inland Transport Committee (ITC) and the ECOSOC Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonized System of Classification and Labelling of Chemicals. The ITC and its 17 working parties, as well as the ECOSOC Committee and its sub-committees are intergovernmental decision-making bodies that work to improve the daily lives of people and businesses around the world, in measurable ways and with concrete actions, to enhance traffic safety, environmental performance, energy efficiency and the competitiveness of the transport sector.

The ECOSOC Committee was set up in 1953 by the Secretary-General of the United Nations at the request of the Economic and Social Council to elaborate recommendations on the transport of dangerous goods. Its mandate was extended to the global (multi-sectoral) harmonization of systems of classification and labelling of chemicals in 1999. It is composed of experts from countries which possess the relevant expertise and experience in the international trade and transport of dangerous goods and chemicals. Its membership is restricted in order to reflect a proper geographical balance between all regions of the world and to ensure adequate participation of developing countries. Although the Committee is a subsidiary body of ECOSOC, the Secretary-General decided in 1963 that the secretariat services would be provided by the UNECE Sustainable Transport Division.

ITC is a unique intergovernmental forum that was set up in 1947 to support the reconstruction of transport connections in post-war Europe. Over the years, it has specialized in facilitating the harmonized and sustainable development of inland modes of transport. The main results of this persevering and ongoing work are reflected, among other things, (i) in 58 United Nations conventions and many more technical regulations, which are updated on a regular basis and provide an international legal framework for the sustainable development of national and international road, rail, inland water and intermodal transport, including the transport of dangerous goods, as well as the construction and inspection of road motor vehicles; (ii) in the Trans-European North-south Motorway, Trans-European Railway and the Euro-Asia Transport Links projects, that facilitate multi-country coordination of transport infrastructure investment programmes; (iii) in the TIR system, which is a global customs transit facilitation solution; (iv) in the tool called For Future Inland Transport Systems (ForFITS), which can assist national and local governments to monitor carbon dioxide (CO<sub>2</sub>) emissions coming from inland transport modes and to select and design climate change mitigation policies, based on their impact and adapted to local conditions; (v) in transport statistics – methods and data – that are internationally agreed on; (vi) in studies and reports that help transport policy development by addressing timely issues, based on cutting-edge research and analysis. ITC also devotes special attention to Intelligent Transport Services (ITS), sustainable urban mobility and city logistics, as well as to increasing the resilience of transport networks and services in response to climate change adaptation and security challenges.

In addition, the UNECE Sustainable Transport and Environment Divisions, together with the World Health Organization (WHO) – Europe, co-service the Transport Health and Environment Pan-European Programme (THE PEP).

## EXECUTIVE SUMMARY

International rail passenger transport is of fundamental importance to the movement of people across borders in the ECE region. Its central role was highlighted in Inland Transport Committee Resolution No. 264. The COVID-19 pandemic offers, beyond its negative economic impacts that remain to be recovered from, the opportunity to reconsider the role of rail transport in the ECE region and further promote it in the post-pandemic recovery.

The workshop dedicated to “The development of international passenger rail transport in the context of ITC Resolution No. 264”, held during the seventy-fourth session of the Working Party on Rail Transport on the 18 November 2020, provided an overview of the situation of international passenger rail transport in the ECE region and the impact of the COVID-19 pandemic.

It showed that joint efforts are necessary at several levels and in various fields: at the national level where investment in infrastructure and rolling stock, improvement of passenger services are necessary, and at the regional and international level, where border crossing formalities often need to be harmonized and simplified.

In the ECE region, the current focus on sustainability in the transport sector may offer the opportunity to national, international and private stakeholders to participate in the development of international passengers rail transport by giving a special attention to intermodality, with the aim to get a seamless network, more efficient and attractive.

It was agreed that international rail passenger transport needs to be developed further and facilitated by the creation and implementation of appropriate legal instruments at a pan-European level.

# CONTENTS

<b>UNITED NATIONS ECONOMIC COMMISSION FOR EUROPE</b> . . . . .	<b>iii</b>
<b>EXECUTIVE SUMMARY</b> . . . . .	<b>v</b>
<b>1 INTRODUCTION</b> . . . . .	<b>1</b>
<b>2 STATISTICS ON INTERNATIONAL RAIL PASSENGER TRANSPORT</b> . . . . .	<b>3</b>
2.1 Overall trends in international passenger movements . . . . .	3
2.2 Origin-destination flows . . . . .	6
2.3 North American Data . . . . .	7
2.4 COVID-19 Impact in Available European countries . . . . .	9
<b>3 FINDINGS OF THE WORKSHOP DEDICATED TO “THE DEVELOPMENT OF INTERNATIONAL PASSENGER RAIL TRANSPORT IN THE CONTEXT OF ITC RESOLUTION No. 264”</b> . . . . .	<b>10</b>
3.1 The national situation . . . . .	10
3.1.1 Bosnia and Herzegovina . . . . .	10
3.1.2 Russian Federation. . . . .	11
3.1.3 United Kingdom . . . . .	12
3.1.4 Romania. . . . .	13
3.1.5 Ukraine . . . . .	14
3.1.6 Azerbaijan . . . . .	14
3.1.7 Albania . . . . .	15
3.2 The international perspective . . . . .	15
3.2.1 Situation of high-speed rail in Italy (TRA Consulting) . . . . .	15
3.2.2 The international perspective: Shift2Rail Joint Undertaking . . . . .	17
3.2.3 The international perspective: Community of European Railway and Infrastructure Companies. . . . .	17

<b>3.3 Trends and opportunities . . . . .</b>	<b>18</b>
3.3.1 Joint efforts are necessary at the regional/international level and on border crossing formalities and improve international rail passenger transport . . . . .	18
3.3.2 A focus on sustainability . . . . .	19
3.3.3 The development of new services such as integrated ticketing schemes can contribute to make rail passenger transport more competitive and connected with other transport modes . . . . .	20
 <b>4 CONCLUSION . . . . .</b>	 <b>21</b>
 <b>ANNEX . . . . .</b>	 <b>22</b>
