

Bosna i Hercegovina

**Initial National Communication
of Bosnia and Herzegovina
under the United Nations Framework
Convention on Climate Change**

INITIAL NATIONAL COMMUNICATION (INC)
OF BOSNIA AND HERZEGOVINA
UNDER THE UNITED NATIONS
FRAMEWORK CONVENTION
ON CLIMATE CHANGE (UNFCCC)

Banja Luka, October 2009

INITIAL NATIONAL COMMUNICATION (INC) OF BOSNIA AND HERZEGOVINA UNDER THE UNITED NATIONS FRAMEWORK CONVENTION ON CLIMATE CHANGE (UNFCCC)

Banja Luka, October 2009

Authors:

Project Board:

Goran Vukmir, Ljiljana Stanišljević, Mehmed Cero, Merzuk Cacan, Milena Marković, Mladen Rudež, Ozren Laganin, Radmila Kostić, Senad Oprašić, Suada Čatović and Tomislav Lukić.

UNDP BiH:

Goran Vukmir

Igor Palandžić

Siniša Rodić

Nikola Arežina

INC Experts team:

Borislav Jakšić, Project Coordinator

Martin Tais, Team Leader

Petar Gvero, Team Leader

Aleksandar Knežević, Team Leader

Aida Muminović, Amila Selmanagić, Anđa Kalem – Perić, Andrea Marković, Azrudin Husika, Berislav Blagojević, Borko Sorajić, Bosiljka Stojanović, Đorđe Vojinović, Dragica Aksić, Ermina Iljezović, Esena Kupusović, Goran Trbić, Gordana Tica, Hamid Čustović, Jasmin Bučo, Jasmina Čomić, Kasim Tatić, Lazo Roljić, Mediha Voloder, Merima Karabegović, Mihajlo Marković, Milovan Kotur, Murat Prašo, Nada Rudan, Predrag Ilić, Radislav Tošić, Ranka Radić, Sabina Hodžić, Samir Đug, Saša Papuga, Selma Čengić, Semin Petrović, Stela Pavlović, Susan Legro, Vladimir Bjelić, Željko Majstorović and Zijad Jagodić

CONTENT

Introduction	11
EXECUTIVE SUMMARY	13
Introduction	13
National Circumstances	13
Calculation of Greenhouse Gas Emissions	14
Vulnerability and Adaptation to Climate Change	16
Estimating the Potential for Mitigating Climate Change in BiH	19
Other Relevant Activities	20
Constraints and Gaps and Related Technological and Capacity Needs	21
International Cooperation	22
Recommendations and Next Steps	22
1. National Circumstances	23
1.1. Structure and Institutional Framework	23
1.1.1. Environmental responsibilities of ministries and other bodies	24
1.1.2. Development Strategy of Bosnia and Herzegovina and the National Environmental Action Plan	25
1.1.3. Environmental Statistics	25
1.2. Geographical Characteristics	26
1.3. Population	27
1.4. Climate Characteristics	28
1.5. Sector Analysis	29
1.5.1. Economy and industry	29
1.5.2. Energy	30
1.5.3. Transport	32
1.5.4. Agriculture	34
1.5.5. Forestry	35
1.5.6. Waste management	36
1.5.7. Water management	36
1.5.8. Health	38
1.5.9. Education	39
1.6. Poverty	40
1.7. Challenges of long term development	40
2. Calculation of Greenhouse Gas Emissions	42
2.1. Introduction	42
2.2. Data collection and processing system	42
2.2.1. Calculating emission factors	43
2.2.2. Reporting	44
2.2.3. Quality control (QC) and quality assurance (QA)	44
2.3. Methodology	45
2.3.1. Inventory preparation process	45

2.3.2.	CORINAIR system	45
2.3.3.	SNAP and SPLIT codes	46
2.3.4.	Fuel codes	46
2.3.5.	General methods in use	47
2.4.	Results of 1990 GHG emissions estimation	47
2.4.1.	Emission of carbon dioxide (CO ₂)	47
2.4.2.	Energy production	49
2.4.3.	Industrial processes	51
2.4.4.	Sinks	51
2.4.5.	Emission of methane (CH ₄)	52
2.4.6.	Emission of nitrous oxide (N ₂ O)	52
2.5.	Emission of indirect greenhouse gases	53
2.6.	Uncertainty of calculations and verification	53
2.6.1.	Uncertainty of calculations	53
2.6.2.	Qualitative analysis of uncertainty in greenhouse gas emission calculations in Bosnia and Herzegovina for year 1990	54
2.6.3.	Verification	55
3.	Vulnerability and adaptation	56
3.1.	Sources of information on climate and climate change in BiH	56
3.1.2.	Climate Conditions in BiH	56
3.2.	Climate variability and projections of extreme events	58
3.2.1.	Projections of Future Climate Change in BiH	58
3.2.1.1.	Projected Regional Changes in Temperature from the EH50M	58
3.2.1.2.	Projected Regional Changes in Precipitation from the EH50M	58
3.2.2.	Other projections of future climate change in BiH	59
3.2.2.1.	Changes in temperature from various other sources	59
3.2.2.2.	Changes in precipitation from various other sources	59
3.3.	Selection of adequate approach and methods for the development of climate change scenarios	66
3.3.1.	Proposed steps to expand scenarios to reflect national conditions in future projections	66
3.4.	Assessment of vulnerability	66
3.4.1.	Biodiversity and ecosystems	67
3.4.1.1.	Impacts	67
3.4.1.2.	Impact on plant species	68
3.4.1.3.	Impacts on plant communities	69
3.4.1.4.	Impacts on the biocenosis of the soil	70
3.4.1.5.	Impacts on the biocenosis of fresh waters	70
3.4.1.6.	Impacts on fauna	70
3.4.1.7.	Impacts on coastal ecosystems	71
3.4.1.8.	Impacts on protected areas	71
3.4.2.	Water resources and coastal zones	71
3.4.2.1.	Impacts on Precipitation and runoff on coastal zones	75
3.4.2.3.	Impacts on water management systems	75
3.4.3.	Agriculture	76
3.4.3.1.	General impacts on agriculture	76
3.4.3.2.	Vulnerability to drought at the national level	76
3.4.3.3.	Vulnerability to drought at the local level	79
3.4.4.	Forestry	79
3.4.4.1.	Vulnerability of forest ecosystems to climate change in BiH	79
3.4.4.2.	Impacts on Forest Biodiversity	80
3.4.5.	Health	81
3.4.5.1.	Direct Impacts on Health	82
3.4.5.2.	Indirect Impacts on Health	82
3.4.5.3.	Vulnerability of Human Health	82

3.4.6.	Socio-economic impacts	82
3.5.	Analysis of potential and elaboration of adaptation measures for vulnerable sectors	83
3.5.1.	Biodiversity	83
3.5.2.	Water resources	84
3.5.2.1.	Hydrological Information System (HIS) development	84
3.5.2.2.	Water demand and water supply adaptation measures	84
3.5.2.3.	Bulkheads and reservoirs as adaptation measures	85
3.5.3.	Agriculture	85
3.5.3.1.	Conditions for adoption of drought-proofing practices by farmers	86
3.5.3.2.	Anti-drought measures	86
3.5.3.3.	Measures for protection of cattle from high temperatures	87
3.5.4.	Forestry	88
3.5.4.1.	Needs and possible adaptation measures	88
3.5.5.	Health	89
3.5.5.1.	Information necessary for adaptation in the health sector	89
3.5.5.2.	Awareness raising as an adaptive measure	89
3.5.5.3.	Adaptive measures to protect human health in the buildings sector	90
3.5.5.4.	Secondary health impacts of adaptation responses in other sectors	90
3.5.5.5.	Summary adaptive measures to protect human health	90
3.5.6.	Adaptation and socio-economic development	91
3.5.6.1.	Proposed measures related to socio-economic development	91
3.5.7.	Spatial and urban planning	92
3.5.7.2.	Legislative measures to support adaptation in spatial planning	92
3.5.7.3.	General adaptation measures in spatial planning	93
3.5.7.4.	Urban planning	93
3.6.	Frameworks for adaptation to climate change in BiH	95
3.6.1.	Adaptive Capacity	96
3.6.2.	Approach to adaptation measures	97
3.6.3.	Climate Change Adaptation Policies and Policy Frameworks	99
3.6.4.	Economic incentives	101
3.6.5.	Public involvement in adaptation policies and measures	102
3.6.6.	Information and awareness raising activities regarding adaptation	102
4.1.	Methodology	103
4.2.	The energy sector for climate change	103
4.2.1.	Renewable energy resources	104
4.2.1.1.	Hydropower potential	104
4.2.1.2.	Wind power	105
4.2.1.3.	Geothermal energy	105
4.2.1.4.	Solar energy	107
4.2.1.5.	Biomass	108
4.2.2.	Power generation – baseline scenario	108
4.2.2.1.	The power sector in Federation of BiH	110
4.2.2.2.	The power sector in Republic of Srpska	110
4.2.3.	Power generation – greenhouse gas emission reduction scenario with measures	110
4.2.3.1.	Potential of GHG emission reductions in thermal power plants	111
4.2.3.2.	Potential for GHG emission reductions from using natural gas for electricity generation GHG emission reduction from using renewable energy sources	112
4.2.4.	Production and consumption of thermal energy – baseline scenario	114
4.2.4.1.	Gas utilization	114
4.2.4.2.	District heating	115
4.2.4.3.	Buildings	115
4.2.5.1.	Gas utilization	117

4.2.5.2. District heating	117
4.2.5.3. Buildings	123
4.3.5.4. Measures and projects in the sector of RES to mitigate GHG emissions	126
4.3. Industrial Processes	130
4.3.1. Inorganic Technologies– Baseline Scenario	130
4.3.1.1. Field Overview	130
4.3.1.2. Data on Emissions and Energy Consumption	131
4.3.2. Organic Technologies – Baseline Scenario	132
4.3.2.1. The Most Significant Organic Technology Fields in B&H	132
4.3.2.2. Overview of Products by Fields	132
4.3.2.3. Energy Consumption in Meat Industry	132
4.3.2.4. Overview of the Situation in BiH Breweries	132
4.3.2.5. Overview of situation in fruit and vegetable processing factories	133
4.3.2.6. Petroleum refinery	133
4.3.2.7. Pulpa and paper production	133
4.3.3. Inorganic technologies – greenhouse gas emission reduction scenario with measures	134
4.3.3.1. Reduction of GHG emissions from cement industry	134
4.3.3.2. GHG emission reduction potential	134
4.3.4. Organic technologies – greenhouse gas emission reduction scenario with measures	135
4.3.4.1. Available renewable energy source potential for using waste	136
4.3.4.3. Fruit and vegetable industry	136
4.3.4.4. Leather industry	136
4.3.4.5. Edible oil industry	136
4.3.4.6. Dairy industry	137
4.4. Transport	137
4.4.1. Baseline scenario	137
4.4.1.1. Road transport	137
4.4.1.2. Air transport	138
4.4.1.3. Railway transport	138
4.4.1.4. Sea and river transport	139
4.4.1.5. Consumption of energy sources	139
4.4.2. Greenhouse gas emission reduction scenario with measures	139
4.4.2.1. Road transport	139
4.4.2.2. Air transport	140
4.4.2.3. Railroad transport	140
4.4.2.4. Sea and river transport	140
4.5. Agriculture	140
4.5.1. Baseline scenario	140
4.5.1.1. Agricultural sector overview	140
