Foreword

These editions of the *Checklist of CITES species* and of the *Annotated CITES Appendices and reservations* (the latter in the accompanying CD-ROM only) take into account the amendments to the CITES Appendices and the changes in nomenclature adopted at the 13th meeting of the Conference of the Parties to CITES (Bangkok, 2004).

At that meeting, the Conference of the Parties recognized the Checklist and its updates as an official digest of the scientific names of species listed in the CITES Appendices reflecting the names contained in the official standard references. We are most grateful to the UNEP World Conservation Monitoring Centre (UNEP-WCMC) for undertaking the production of this Checklist once again, and particularly to the staff responsible for the meticulous work involved.

The costs of preparation and production of this Checklist have been borne by the European Commission, the Joint Nature Conservation Committee (United Kingdom) and UNEP-WCMC, as well as by the CITES Secretariat, and we wish to thank our partners very much for their important contributions.

We know that this Checklist is widely used and appreciated by Management Authorities, Scientific Authorities, Customs officers and other people involved in the implementation of CITES, as well as by non-governmental organizations, academics, the press and others. We are conscious, however, that we must continue to try to meet the changing needs of the users of this guide. For this reason in particular, we welcome the comments and suggestions of all users on ways to improve it in the future.

Acknowledgements

The *Checklist of CITES Species* was prepared on behalf of the CITES Secretariat by the UNEP World Conservation Monitoring Centre (UNEP-WCMC).

UNEP-WCMC is the biodiversity assessment and policy implementation arm of the United Nations Environment Programme, the world's foremost intergovernmental environmental organization. UNEP-WCMC aims to help decision-makers recognize the value of biodiversity to people everywhere, and to apply this knowledge in all that they do. The Centre's challenge is to transform complex data into policy-relevant information, to build tools and systems for analysis and integration of these data, and to support the needs of nations and the international community as they engage in joint programmes of action.

This publication was edited by Tim Inskipp and Harriet Gillett, supported by Joan Field and Sarah Ferriss. Technical support was provided by James O'Carroll. The project was supervised by Gerardo Fragoso. The production team are most grateful to the staff of the CITES Secretariat and to the CITES Nomenclature Committee for their advice and assistance.

UNEP-WCMC also wishes to acknowledge the financial support of the European Commission and of the Joint Nature Conservation Committee of the United Kingdom, which has made possible the production of this book and CD-ROM.
