The **UNEP World Conservation Monitoring Centre** (UNEP-WCMC) is the biodiversity assessment and policy implementation arm of the United Nations Environment Programme, the world's foremost intergovernmental environmental organization. UNEP-WCMC aims to help decision-makers recognize the value of biodiversity to people everywhere, and to apply this knowledge in all that they do. The Centre's challenge is to transform complex data into policy-relevant information, to build tools and systems for analysis and integration of these data, and to support the needs of nations and the international community as they engage in joint programmes of action.

El **PNUMA Centro de Monitoreo de la Conservación Mundial** (UNEP-WCMC) es el brazo del Programa de las Naciones Unidas del Medio Ambiente, la principal organización intergubernamental ambiental en el mundo, encargado de evaluar la biodiversidad y la implementación de políticas ambientales. El UNEP-WCMC aspira a ayudar a tomadores de decisiones a reconocer el valor de la biodiversidad para la gente de todo el mundo, y a aplicar este conocimiento en todo lo que hacen. El desafío del Centro es transformar datos complejos en información relevante para las formulación de políticas de gestión, desarrollar instrumentos y sistemas para el análisis y la integración de esos datos, y apoyar las necesidades de las naciones y de la comunidad internacional en general en sus esfuerzos por desarrollar programas de acción conjunta.

Le **PNUE Centre de Surveillance Continue pour la Conservation de la Nature Mondiale** (UNEP-WCMC) est l'agence chargée de l'évaluation de la diversité biologique et de la mise en oeuvre des directives du Programme des Nations Unies pour l'Environnement, la principale organisation intergouvernementale environnementale au monde. Le Centre aspire à aider les gouvernements à reconnaître l'importance de la diversité biologique pour les êtres humains du monde entier et à appliquer cette connaissance à toutes leurs activités. Le défi du Centre consiste à transformer et simplifier des données complexes en informations pertinentes afin de trouver des outils et d'établir des systèmes permettant leur intégration et leur analyse dans la politique de tous les jours. Le Centre vise à appuyer les besoins des nations et de la communauté internationale dans leurs activités et programmes communs environnementaux.

## **Foreword**

This edition of the *Checklist of CITES Species* takes into account the amendments to the CITES Appendices and the changes in nomenclature adopted at the 12th meeting of the Conference of the Parties to CITES (Santiago, 2002).

At its 12th meeting, the Conference of the Parties adopted the Checklist and its updates accepted by the Nomenclature Committee as the standard nomenclature to the names of species listed in the CITES Appendices. We are most grateful to the UNEP World Conservation Monitoring Centre (UNEP-WCMC) for undertaking the production of this Checklist once again, and particularly to the staff responsible for the meticulous work involved.

The costs of preparation and production of this Checklist have been borne by the European Commission, the Joint Nature Conservation Committee (United Kingdom) and UNEP-WCMC, as well as by the CITES Secretariat, and we wish to thank our partners very much for their important contributions.

We know that this Checklist is widely used and appreciated by Management Authorities, Scientific Authorities, Customs officers and other people involved in the implementation of CITES, as well as by non-governmental organizations, academics, the press and others. We are conscious, however, that we must continue to try to meet the changing needs of the users of this guide. For this reason in particular, we welcome the comments and suggestions of all users on ways to improve it in the future.

CITES Secretariat  
Geneva  
2003

## **Acknowledgements**

This publication was prepared on behalf of the CITES Secretariat by the UNEP World Conservation Monitoring Centre (UNEP-WCMC). It was edited by Tim Inskipp and Harriet Gillett, supported by Alice Davies and Joan Field. Technical support was provided by James O'Carroll, Paul Birrel and Phill Fox. The project was supervised by Gerardo Fragoso.

The production team are most grateful to the staff of the CITES Secretariat for their advice and assistance. UNEP-WCMC also wishes to acknowledge the financial support of the European Commission and of the Joint Nature Conservation Committee of the United Kingdom, which has made possible the production of this book and CD-ROM.

# **Introduction**

## **CITES-listed fauna and flora**

This book and CD-ROM provide a Checklist of the fauna and the flora listed in Appendices I, II and III of CITES as adopted by the Conference of the Parties, valid from 13 February 2003. The CD-ROM also includes the Annotated Appendices, which have an index to family names and common names. It is hoped that these lists will act as an aid to Management and Scientific Authorities, Customs officials, and all others involved in implementing and enforcing the Convention.

### **General note**

The names used in the CITES Appendices are the scientific names approved by the CITES Nomenclature Committee. Common names in the Checklist and Annotated Appendices are included only for reference. If the common name of an animal or plant included in the CITES Appendices is not included, it should be looked for under its scientific name or under another common name.

Species included in the Checklist and Annotated Appendices are referred to:

- a) by the name of the species; or
- b) as being all of the species included in a higher taxon or designated part thereof.

Other references to taxa above the specific level are for the purposes of information or classification only.

Further details relating to each taxon, including distribution and author names, are included in the CITES-species database available on the CITES website ([www.cites.org](http://www.cites.org)).

### **Checklist**

The Checklist of CITES-listed species comprises an alphabetical list of fauna followed by flora. There are three types of entry: scientific name, common name and scientific synonym. The common name and synonym entries serve as indexes to the adopted scientific name entries, where CITES-related information is provided.
