

**Checklist of mammals
listed in the
CITES appendices**

JNCC REPORT

JOINT NATURE CONSERVATION COMMITTEE

Report distribution

Report Number: No 235

Contract Number/JNCC project number: F71-12-332

Date received: 9 June 1995

Report title: Checklist of mammals listed in the CITES appendices

Contract title: Revise Checklists of CITES species database

Contractor: World Conservation Monitoring Centre
219 Huntingdon Road, Cambridge, CB3 0DL

Comments: A further mammalian edition in the Checklist series begun by NCC in 1979, revised and brought up to date with current CITES listings

Restrictions: None

Distribution:

JNCC report collection	2 copies

Joint Nature Conservation Committee Report No. 235

**Checklist of mammals
listed in the
CITES appendices**

compiled by the

World Conservation Monitoring Centre

Prepared under contract from the Joint Nature Conservation Committee by the **World Conservation Monitoring Centre**, Cambridge, UK. Established in 1988 as a company limited by guarantee with charitable status. WCMC is managed as a joint-venture between the three partners in the *World Conservation Strategy* and its successor *Caring for the Earth*: IUCN - The World Conservation Union, UNEP - United Nations Environment Programme, and WWF - World Wide Fund for Nature. The Centre provides information services on the conservation and sustainable use of species and ecosystems and supports others in the development of their own information systems.

Acknowledgements

This checklist was compiled by the World Conservation Monitoring Centre under contract F71-12-332 from the Joint Nature Conservation Committee. The author was Tim Inskipp.

The volume builds on earlier editions and the numerous contributors to those editions are acknowledged, particularly the authors, Tim Inskipp, Jonathan Barzdo and Crawford Allan.

For their assistance in producing the current edition, the following WCMC staff are also thanked: Mary Cordiner, Helen Corrigan, Neil Cox, Lisa Grigg, Brian Groombridge, Helen Primozic, Julie Reay and Rosemarie Warwick.

David Denison is thanked for providing a program to renumber the extensive reference list to this volume.

David Morgan of the JNCC International Policy Branch is thanked for providing expert advice and guidance throughout.

Introduction

In April 1991, the Nature Conservancy Council for England, Countryside Council for Wales and Scottish Natural Heritage acting together through the Joint Nature Conservation Committee were appointed by the Secretary of State for the Environment as the United Kingdom's Scientific Authority for Animals under the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES). CITES regulates international trade in wild animals and plants and in products derived from them, to help to ensure their conservation on a worldwide scale. The purpose of CITES is to regulate international trade in endangered wild animals and plants and in products derived from them, to help to ensure their conservation on a worldwide scale.

The purpose of this work is to provide a list of the species and subspecies included in Appendices I, II and III to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES). This document incorporates additions and amendments to the CITES appendices up to and including those made at the 9th Meeting of the Conference of the Parties in Florida in November 1994 (effective from 16 February 1995). For each taxon, the scientific name is given first, with the currently most frequently used synonyms in brackets. Common names in the three working languages of CITES appear on the following lines, below which the geographical range is indicated. The numbers appearing in square brackets refer to entries in the reference list, at the back of this document.

Conservation status is provided using the 1994 *IUCN Red List of Threatened Animals*. For background material on the rationale of the IUCN threat categories, readers are referred to Groombridge, (1993); for background on the workings of CITES, recommended works are Favre (1989) and Wijnstekers (1992). For information by country on the diversity and status of mammals and other taxonomic groups, and for a general review of biodiversity, readers are referred to WCMC (1992) and WCMC (1994).

In a publication of this nature, it is inevitable that users will discover entries that need correcting or updating. The publishers would be grateful if their attention could be drawn to these entries, and the World Conservation Monitoring Centre would be grateful to receive details of such changes so that they can be incorporated in the database from which this publication is produced.

Explanatory notes

Scientific names

Nomenclature of mammals follows (Wilson and Reeder (1993), except where the CITES Appendices differ (as noted below).

The taxonomic scope and sequence of orders in this checklist follow the system adopted in the Appendices to CITES. The Appendices are based on the classification of mammals proposed by Simpson (1945).

The sequence and taxonomic scope of orders and families also follows the Appendices to CITES. The Appendices differ from Simpson (1945) at ordinal and familial level as given below:

The order Marsupialia is split into three orders: Dasyuromorphia, Peramelomorphia and Diprotodontia.

The following families have been separated:

Dasyuromorphia

Thylacinidae from Dasyuridae

Diprotodontia

Burramyidae from Phalangeridae

Potoroidae from Macropodidae

Primates

Cheirogaleidae and Megaladapidae from

Lemuridae

Galagonidae from Loridae

Hylobatidae from Pongidae

Cetacea

Neobalaenidae from Balaenidae

Carnivora

Herpestidae from Viverridae

Artiodactyla

from Cervidae

The following families/genera have been included within another family:

Primates

Callimico in Callitrichidae not Cebidae

Pongidae in Hominidae

Carnivora

Ailuropoda and *Ailurus* in Ursidae not

Procyonidae

Choloepus in Megalonychidae not Bradypodidae

The nomenclature of genera and species follows Wilson and Reeder (1993), except in the following instances:

Platyrrhinus lineatus is included as *Vampyrops lineatus*

Tamandua mexicana is included in *T. tetradactyla*

Equus przewalskii is separated from *E. caballus*

Bubalus bubalis is included as *B. arnee*

Bos frontalis is included as *B. gaurus*

Bos grunniens is included as *B. mutus*

Bubalus bubalis is included as *B. arnee*

Ovis ophion is included as *O. orientalis ophion* rather than *O. aries ophion*.

These differences are included as synonyms in the list, and alternative names used in Honacki *et al.* (1982) and Corbet and Hill (1991) are also included as synonyms.

Common names

The English common names used are taken from Corbet and Hill (1991), from the *IUCN Red Data Book* series and from a number of standard reference works for the mammals of particular
