

AGEDI THE ABU DHABI GLOBAL ENVIRONMENTAL DATA INITIATIVE

SOCIOECONOMIC SYSTEMS: DESALINATED WATER SUPPLY

مبادرة أبوظبي العالمية للبيانات البيئية. Abu Dhabi Global Environmental Data Initiative

Suggested Citation: AGEDI. 2016. Final Technical: Regional Desalination and Climate Change. LNRCCP. CCRG/IO

This report was prepared as an account of work sponsored by the Abu Dhabi Global Environmental Data Initiative (AGEDI). AGEDI neither makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, nor usefulness of the information provided. The views and opinions of authors expressed herein do not necessarily state or reflect those of the EAD or AGEDI.

Acknowledgments

Many individuals provided invaluable support, guidance, and input to the Regional Desalination and Climate Change project.

The authors would like to express their sincere and heartfelt expressions of gratitude for their review by providing comments, feedback and /or data towards the multiple deliverables within the project process including:

Mr. Abubaker Awad Salim Elhakeem, Dubai Municipality (DM) Ms. Ameena Ali, Researcher Dr. Asma Ali Abahussain, Arabian Gulf University (AGU) Ms. Ayesha Al Blooshi, Environment Agency Abu Dhabi (EAD) Mr. Hossam El Alkamy, Environment Agency Abu Dhabi (EAD) Dr. Fred Launay, Environment Agency Abu Dhabi (EAD) Dr. John Burt, New York University (NYU) Mr. Kevin Reid, Urban Planning Council (UPC) Ms. Manya Russo, Emirates Wildlife Society (EWS) - WWF Ms. Marina Antonopoulou, Emirates Wildlife Society (EWS) - WWF Dr. Mohamed Dawoud, Environment Agency Abu Dhabi (EAD) Ms. Nadia Rouchdy, Emirates Wildlife Society (EWS) - WWF Mr. Peter Fippenger, Environment Agency Abu Dhabi (EAD) Dr. Richard John Obrien Perry, Environment Agency Abu Dhabi (EAD) Dr. Robert Baldwin, Five Oceans Environmental Services LLC Dr. Rula Qalyoubi, UNEP-ROWA Dr. Simon Wilson, Five Oceans Environmental Services LLC Mr. Tanzeed Alam, Emirates Wildlife Society (EWS) - WWF Dr. Walid El Shorbagy, MWH Global Mr. Winston Cowie, Environment Agency Abu Dhabi (EAD)

We are additionally thankful the participation, time and effort that multiple stakeholders across the region who participated in the multitude of meetings and dialogue. The authors would like to especially thank the following stakeholders for their particularly involved participation: Environment Agency-Abu Dhabi team, Fariba Amirrad MottMacdonald, Geoff Toms Deltares, Mohammad Hajjiri ADWEC, Naoko Kubo MOCCAE, UAE Ministry of Energy team and Robin Morelissen Deltares.

About this Final Technical Report

In October 2013, the Abu Dhabi Global Environmental Data Initiative (AGEDI) launched the "Local, National, and Regional Climate Change (LNRCC) Programme to build upon, expand, and deepen understanding of vulnerability to the impacts of climate change as well as to identify practical adaptive responses at local (Abu Dhabi), national (UAE), and regional (Arabian Peninsula) levels. The design of the Programme was stakeholder-driven, incorporating the perspectives of over 100 local, national, and regional stakeholders in shaping 12 research sub-projects across 5 strategic themes.¹ The "Desalination and Climate Change" sub-project within this Programme aims to assess the vulnerability of the Arabian Gulf waters to climate change in the context of socioeconomic growth in the region.

The purpose of this "Final Technical Report" is to offer a summary of what has been learned in carrying out all research activities involved in the "Desalination & Climate Change" subproject. Ultimately, this report seeks to provide the reader with a comprehensive review of the methodological approach, analytical framework, data acquisition challenges, key assumptions, major findings, and other issues that can encourage future research regarding the strengthening of measures to protect Arabian Gulf waters.

The authors of this report are José Edson, Ilana Wainer, and Bruno Ferrero from the Oceanography Institute at the University of Sao Paulo in Brazil. The authors would like to acknowledge the contributions of Bill Dougherty from the Climate Change Research Group and Patrick Keys from Colorado State University who assisted with projection of future brine discharges into the Gulf

¹ For more information on the LNRCC programme and the desalination sub-project, please contact Jane Glavan (Inrclimatechange@ead.ae).

Table of Contents

<u>ABO</u>	UT THIS FINAL TECHNICAL REPORT ER	ROR! BOOKMARK NOT DEFINED.
<u>ACK</u>	NOWLEDGMENTS	<u>I</u>
<u>LIST</u>	OF FIGURES	<u>V</u>
<u>LIST</u>	OF TABLES	VIII
<u>LIST</u>	OF BOXES	VIII
<u>LIST</u>	OF ACRONYMS	IX
<u>SELE</u>	ECTED GLOSSARY	XI
<u>EXE(</u>	CUTIVE SUMMARY	XIII
<u>1.</u>]	BACKGROUND	1
1.1.	THE DESALINATION CONTEXT	1

- Figure 5-1: Hydronamic sketch of the pre-processing "mechanism" that will provide an already hydrostatic and geostrophic balanced flow to the saline river outflow. To help ilustration, some symbols used are analogous to the electric circuits.......23
- Figure 5-3: The Shatt al-Arab basin, composed of the Tigris and Euphrates Rivers, and near the Arabian Gulf, the Karkhenh and Karun rivers (UNESCWA, 2013)27
- Figure 6-2: The "Southwest reference area" is the focus of the seven (7) experiments......30
- Figure 6-3: Time averaged salinity for the historical period (i.e., 2000-2005; no climate change) for the Early 21st (left) and Validation (right) runs, with surface salinity (top pair of maps) and bottom salinity (middle pair of maps). The bottom pair of maps illustrates the difference (or impact of desalination) for surface salinity (left) and bottom salinity (right).
- Figure 6-6: Salinity timeseries for the all the five 2040-2050 scenarios experiments. Averaged for two different areas coastal and southweast AG (i.e. see earlier Figure 6-2). The time series includes the warm-up period. The light blue line refers to the still running high saline experiment (ongoing). The magenta arrow points to the date (a summer condition) for which all the experiments have been climatologically reduced and analysed.
- Figure 6-7: Maps of bottom salinity corresponding to the summer of 2045. The black arrow points to experiments increasing in the saline river outflow, as text details on the right
