**RE: Partnership**

Dear Sir

Enclosed you will find *UNEP Global Mercury Partnership Registration Form* with the relevant information.

I have worked with the Geological Survey of Denmark and Greenland (GEUS) for about 10 years on mitigating environmental problems caused by small-scale mining/artisanal mining in countries like Kyrgyz Republic, Mongolia, Tanzania, Zambia, Nigeria and Philippines.

Most of my work has been focussed on the environmental and health problems caused by release of mercury from small-scale mining.

At the present time I have projects in Tanzania and the Philippines introducing an alternative gold extraction technique to mercury the so-called borax method. The method was invented in the Philippines decades ago and is presently used by more than 10.000 small-scale mining in northern Luzon. I have held successful teaching and training courses in the alternative technique in Tanzania in January 2010 and in the Philippines in the autumn 2009.

I have furthermore an ongoing project on testing techniques for cleaning tailings from small-scale miners for mercury in the Philippines where the yearly release of mercury from small-scale mining is in the order of 300 to 500 tones.

Yours sincerely

Peter Appel (pa@geus.dk)
