Gabon Air Quality Policies

This document is based on research that UNEP conducted in 2015, in response to Resolution 7 of the UNEA 1. It describes countrylevel policies that impact air quality. Triple question marks (???) indicate that information for the section couldn't be found.

Please review the information, and provide feedback. A Word version of the template can be provided upon request. Corrections and comments can be emailed to <u>Vered.Ehsani@unep.org</u> and <u>George.Mwaniki@unep.org</u>.

Gabon Air Quality Policy Matrix				
Goals	Status	Current Policies & Programmes		
GENERAL OVERVIEW	Overall situation with respect to air quality in the country, including key air quality challenges: ??? Air quality monitoring system: ???	National Ambient air quality standards: ??? National Air Quality Policy: ??? Air Quality legislation / programmes: Air pollution prevention is regulated by Law 3/77 Other: ???		
REDUCE EMISSIONS FROM INDUSTRIES	 Industries that have the potential to impact air quality: The most important industries are petroleum extraction and refining; manganese, gold; chemicals, ship repair, food and beverages, textiles, lumbering and plywood, cement among others GDP of country: USD 19.97B in 2013 Industries' share of GDP: 63.9% Electricity sources: 59% of the installed electricity generating capacity (415,000 KW in 2010) is generated from fossil fuel; the rest 41% is generated from hydropower¹ 	 Emission regulations for industries: Air pollution prevention is regulated by Law 3/77 which requires that an environmental assessment for all new industrial ventures be conducted. In addition, specific environmental requirements to an industry are typically established within individual concession agreements Small installation's emissions regulated: (<i>Yes/No</i>) ??? Renewable energy investment promoted: ??? Energy efficiency incentives: (<i>ex: Subsidies, labelling, rebates etc</i>) ??? Incentives for clean production and installation of pollution prevention technologies: ??? Actions to ensure compliance with regulations: (<i>monitoring, enforcement, fines etc</i>) ??? Other actions at national, sub-national and / or local level to reduce industry: (<i>can include incentives to move industries to less populated areas here</i>) .Companies are authorized to produce electricity for their own use. As yet, Gabon does not have a comprehensive energy framework, or a dedicated sector law. The

		current national energy policy is aimed at strengthening the existing power generating capacities by diversifying sources of power.
REDUCE EMISSIONS FROM TRANSPORT	 Key transport-related air quality challenges: (ex: vehicle growth, old fleet, dirty fuel, poor public transport etc) Freight and passenger transport is usually provided by private companies or individuals, with a few government owned and operated buses Private car ownership is low with 14 car per 1000 individuals in 2004 Vehicle emissions are a major source of PM, NO2 and CO 	 Vehicle emission limit: (<i>Euro rating</i>) ??? Fuel Sulphur content: (<i>in ppm</i>) Fuel (diesel)sulphur content restricted at 1500ppm Fuel Lead content Unleaded gasoline restrictions since 2005 Restriction on used car importation: The age limit for used cars that can be imported in Senegal is 4 years since 2001. Pre-importation inspection is required for road worthiness Actions to expand, improve and promote public transport and mass transit: ??? Actions to promote non-motorized transport: (<i>ex: include sidewalks and bike lanes in new road projects, car-free areas etc</i>) ??? Other transport-related actions: ???
REDUCE EMISSIONS FROM OPEN BURNING OF AGRICULTUR AL / MUNICIPAL WASTE (OUTDOOR)	 Outdoor, open burning: (ex: is it commonly done? burning what kinds of wastes? etc) Uncontrolled waste burning, which is a common practice, is one of the practices that contributes to deteriorating air quality in urban centers Agricultural waste burning can also impact air quality in the rural areas. 	Legal framework: (ex: is burning banned?) ??? Actions to prevent open burning of municipal waste and / or agricultural waste: ???
REDUCE EMISSIONS FROM OPEN BURNING OF BIOMASS (INDOOR)	 Dominant fuels used for cooking and space heating: Wood is the dominant fuels used for cooking for rural households accounting for 57% of the energy mix in Gabon² 	 Indoor air pollution regulated: (Yes / No) ??? Promotion of non-grid / grid electrification: ??? Promotion of cleaner cooking fuels and clean cook stoves: ??? Other actions to reduce indoor biomass burning, or to reduce its emissions: a solar energy programme is now supplying power to around one hundred villages, all of which have been provided with Siemens solar panels. Under this €18 million scheme, solar power has

Impact:	been installed in schools, shops and homes.
 Indoor air pollution causes an estimated 100 premature deaths every year³ 	
 Air pollution from indoor sources is the single largest contributor to the negative health effects of air pollution in Senegal. 	
 The residential sector contributes most to final energy consumption, primarily due to the extensive use of fuel-wood, with the sector consuming over 80% of the country's biomass supply.
