Ministry of Infrastructure and the
Environment

UNEP promotes environmentally sound practices globally and in its own activities. This report is printed on paper from sustainable forests including recycled fibre. The paper is chlorine free, and the inks vegetable-based. Our distribution policy aims to reduce UNEP's carbon footprint

The Emissions Gap Report 2016

A UNEP Synthesis Report

November 2016

Acknowledgements

The United Nations Environment (UNEP) would like to thank the members of the steering committee, the lead and contributing authors, reviewers and the secretariat for their contribution to the preparation of this assessment report.

Authors and reviewers have contributed to the report in their individual capacities. Their affiliations are only mentioned for identification purposes.

Project steering committee

Jacqueline McGlade (United Nations Environment), John Christensen (UNEP DTU Partnership), Mónica Araya (Nivela), Navroz K. Dubash (Centre for Policy Research, India), Simon Maxwell (Climate and Development Knowledge Network), Surabi Menon (ClimateWorks Foundation), Bert Metz (European Climate Foundation), Yacob Mulugetta (University College London), Bouzekri Razi (Ministry of Environment, Morocco), Katia Simeonova (United Nations Framework Convention on Climate Change), Merlyn van Voore (United Nations Environment)

Chapter 1

Lead authors: Anne Olhoff (UNEP DTU Partnership), John Christensen (UNEP DTU Partnership)

Chapter 2

Lead authors: Taryn Fransen (World Resources Institute), Michel den Elzen (PBL Netherlands Environmental Assessment Agency), Takeshi Kuramochi (NewClimate Institute)

Contributing authors: Greet Janssens-Maenhout (Joint Research Centre, European Commission), Anne Olhoff (UNEP DTU Partnership), Jos Olivier (PBL Netherlands Environmental Assessment Agency)

Chapter 3

Lead authors: Michel den Elzen (PBL Netherlands Environmental Assessment Agency), Niklas Höhne (NewClimate Institute), Joeri Rogelj (International Institute for Applied Systems Analysis)

Contributing authors: Taryn Fransen (World Resources Institute), Mark Roelfsema (PBL Netherlands Environmental Assessment Agency), Sebastian Sterl (NewClimate Institute)

Chapter 4

Lead authors: Niklas Höhne (NewClimate Institute), Philip Drost (United Nations Environment)

Contributing authors: Fatemeh Bakhtiari (UNEP DTU Partnership), Sander Chan (German Development Institute), Ann Gardiner (Ecofys), Thomas Hale (University of Oxford - Blavatnik School of Government), Angel Hsu (Yale University - Yale School of Forestry and Environmental Studies), Takeshi Kuramochi (NewClimate Institute), Daniel Puig (UNEP DTU Partnership), Mark Roelfsema (PBL Netherlands Environmental Assessment Agency), Sebastian Sterl (NewClimate Institute)

Chapter 5

Lead authors: Subash Dhar (UNEP DTU Partnership), Timothy Clifford Farrell (UNEP DTU Partnership), Rana Ghoneim (United Nations Industrial Development Organization), Diana Urge-Vorsatz (Central European University)

Contributing authors: Elisabeth Boles (Massachusetts Institute of Technology), Benigna Boza-Kiss (Central European University), Marco Matteini (United Nations Industrial Development Organization), Jyoti Painuly (UNEP DTU Partnership), Minal Pathak (Center for Environmental Planning and Technology University), Ksenia Petrichenko (UNEP DTU Partnership), Bettina Schreck (United Nations Industrial Development Organization), PR Shukla (Indian Institute of Management, Ahmedabad)

Chapter 6

Lead authors: Frank Sperling (University of Oxford), Ilmi Granoff (Overseas Development Institute)

Contributing authors: Eliza Northrop (World Resources Institute), Anne Olhoff (UNEP DTU Partnership), Andrew Scott (Overseas Development Institute)

Reviewers

Swati Agarwal (The Energy and Resources Institute), Jennifer Bansard (University of Potsdam), Maria Belenky (Climate Advisers), Thomas Black Arbeláez (Centro Andino para la Economía en el Medio Ambiente), Tyler Bryant (International Energy Agency), Laura Cozzi (International Energy Agency), Steffen Dockweiler (Danish Energy Agency),

Patty Fong (European Climate Foundation), Brendan Guy (Natural Resources Defense Council), Matthew Hoffmann (University of Toronto - Munk School of Global Affairs), Angel Hsu (Yale University - Yale School of Forestry and Environmental Studies), Jan Kersting (Fraunhofer Institute for Systems and Innovation Research), Gary Kleiman (World Bank Group), Rob Kool (Netherlands Enterprise Agency), Benoit Lebot (International Partnership for Energy Efficiency Cooperation), Franck Lecocq (Centre International de Recherche sur l'Environnement et le Développement), Perry Miles (European Commission), Karsten Neuhoff (German Institute for Economic Research), Lars J. Nilsson (Lund University - Environmental and Energy Systems Studies), He Ping (Energy Foundation China), Ian Ponce (United Nations Framework Convention on Climate Change), Céline Ramstein (World Bank Group), Oliver Rapf (Building Performance Institute Europe), David Reidmiller (US Department of State), Lisa Ryan (University College Dublin), Yamina Saheb (OpenExp), Reed Schuler (US Department of State), Laura Segafredo (2° Investing Initiative), Jigar Shah (Institute for Industrial Productivity), Ralph Sims (Massey University), Robert Tromop (Efficient Energy International), Harro van Asselt (Stockholm Environment Institute), Lutz Weischer (Germanwatch), Oscar Widerberg (Vrije University Amsterdam - Institute for Environmental Studies), William Wills (Instituto Alberto Luiz Coimbra de Pós-Graduação e Pesquisa de Engenharia - Universidade Federal do Rio de Janeiro), Jim Wolfe (independent consultant)

Cheif scientific editors

Anne Olhoff (UNEP DTU Partnership), John Christensen (UNEP DTU Partnership)

Editorial team

Daniel Puig (UNEP DTU Partnership), Lars Christiansen (UNEP DTU Partnership), Cecilie Larsen (UNEP DTU Partnership)

Project coordination

Lars Christiansen (UNEP DTU Partnership), Cecilie Larsen (UNEP DTU Partnership), Anne Olhoff (UNEP DTU Partnership), Volodymyr Demkine (United Nations Environment)

INDC assessment and gap calculations

Michel den Elzen (PBL Netherlands Environmental Assessment Agency), Hanna Fekete (NewClimate Institute), Niklas Höhne (NewClimate Institute), Joeri Rogelj (International Institute for Applied Systems Analysis)

External global and national modelling data contributors

Climate Analytics, Climate Action Tracker (Marcia Rocha, Bill Hare and Michiel Schaeffer)
Climate Interactive (Lori Siegel and Elisabeth Sawin)
Danish Energy Agency (Steffen Dockweiler)
Ecofys (Pieter van Breevoort)
Energy Research Institute, China (Chenmin He and Kejun Jiang)
International Energy Agency (Laura Cozzi and Fabian Kesicke)

International Institute for Applied Systems Analysis (Nicklas Forsell)
Joint Research Centre, European Commission (Alban Kitous, Kimon Keramidias and Giacomo Grassi)
London School of Economics and Political Science (Joe Cranston Turner and Rodney Boyd)
National Center for Climate Change Strategy and International Cooperation, China (Fu Sha)
PBL Netherlands Environmental Assessment Agency (Annemiek Admiraal and Heleen van Soest)
Pacific Northwest National Laboratory (Gokul Iyer)
Potsdam Institute for Climate Impact Research (Louise Jeffery)
United Nations Framework Convention on Climate Change Secretariat
University of Melbourne (Malte Meinshausen)

Media and launch support

Shereen Zorba (United Nations Environment), Mette Annelie Rasmussen (UNEP DTU Partnership), Evelyn Ongige (United Nations Environment), Sami Dimassi (United Nations Environment), UNEP World Conservation Monitoring Centre

Design, layout and printing

Caren Weeks (independent consultant), Kailow

Translation of Executive summary

Strategic Agenda

Financial contributors

Acknowledgements	iv
Glossary	vii
Acronyms	x
Foreword.....	xi
Executive summary	xii
Chapter 1: Introduction	1
1.1 The Emissions Gap Reports	1
1.2 The context of the 2016 Emissions Gap Report.....	1
1.3 Aim, key questions, and approach of the report	2
Chapter 2: Pre-2020 action: trends, progress and urgency	3
2.1 Introduction.....	3
2.2 Trends in current global emissions	3
2.3 Progress towards achieving the Cancun Pledges: an update focusing on G20 members.....	4
2.4 Amplified urgency of enhanced pre-2020 action	9
Chapter 3: 2030 trends and ambition.....	10
3.1 Introduction.....	10
3.2 Pathways limiting warming to below 2 and 1.5 degrees Celsius	10
3.3 The 2030 emissions gap.....	13
3.4 Understanding the mitigation efforts of the INDCs – A closer look at G20 members	16
3.5 Summary of findings	22
Chapter 4: Bridging the gap – the role of non-state action	23
4.1 Introduction.....	23
4.2 Non-state actors and the climate change negotiations	23
4.3 Overview of initiatives	24
4.4 Estimated emission reductions of non-state actor actions.....	28
4.5 Issues for the future	30
Chapter 5: Bridging the gap – the role of energy efficiency.....	31
5.1 Introduction.....	31
5.2 Building Sector.....	32
5.3 Industry.....	35
5.4 Transport	36
5.5 Opportunities through systems thinking and integration.....	38
5.6 Emerging Opportunities	39
Chapter 6: Bridging the gap – the Sustainable Development Goals and climate change mitigation	40
6.1 Introduction.....	40
6.2 The SDG-mitigation nexus	40
6.3 The role of the SDGs in reducing greenhouse gas emissions: path-alignment and path-contingency	42
6.4 Summing up.....	47
References	48

Glossary

This glossary is compiled according to the Lead Authors of the Report drawing on glossaries and other resources available on the websites of the following organizations, networks and projects: Intergovernmental Panel on Climate Change (Switzerland), Non-State Actor Zone for Climate Action (Germany), United Nations Environment (Kenya), United Nations Framework Convention on Climate Change (Germany) and World Resources Institute (United States).

Adaptation: The process of adjustment to actual or expected climate and its effects. In human systems, adaptation seeks to moderate or avoid harm or exploit beneficial opportunities. In some natural systems, human intervention may facilitate adjustment to expected climate and its effects.

Avoid Shift Improve: A framework proposed for mitigation from the transport sector. Avoid refers to the need to improve the efficiency of the transport system such as through integrated land-use planning. Shift involves servicing demand using low-carbon modes like using public transport instead of motorized private vehicles. Improve relies on vehicle efficiency improvement or alternative vehicle technologies to reduce emissions such as using a vehicle powered by alternative fuels.

Baseline/reference: The state against which change is measured. In the context of transformation pathways, the term 'baseline scenarios' refers to scenarios that are based on the assumption that no mitigation policies or measures will be implemented beyond those that are already in force and/or are legislated or planned to be adopted. Baseline scenarios are not intended to be predictions of the future, but rather counterfactual constructions that can serve to highlight the level of emissions that would occur without further policy effort. Typically, baseline scenarios are then compared to mitigation scenarios that are constructed to meet different goals for greenhouse gas emissions, atmospheric concentrations or temperature change. The term 'baseline scenario' is used interchangeably with 'reference scenario' and 'no policy scenario'. In much of the literature the term is also synonymous with the term 'business as usual (BAU) scenario', although the term 'BAU' has fallen out of favour because the idea of 'business as

usual' in century-long socioeconomic projections is hard to fathom.

Bottom-up model: In the context of this assessment, a model that represents a system by looking at its detailed underlying parts. Compared to so-called top-down models, which focus on economic interlinkages, bottom-up models of energy use and emissions can provide greater resolution with regards to sectors or mitigation technologies.

Cancun Pledge: During 2010, many countries submitted their existing plans for controlling greenhouse gas emissions to the Climate Change Secretariat and these proposals were formally acknowledged under the United Nations Framework Convention on Climate Change (UNFCCC). Developed countries presented their plans in the shape of economy-wide targets to reduce emissions, mainly up to 2020, while developing countries proposed ways to limit their growth of emissions in the shape of plans of action.

Carbon dioxide budget (or carbon budget): For a given temperature rise limit, for example a 1.5°C or 2°C long-term limit, the corresponding carbon budget reflects the total amount of carbon emissions that can be emitted for temperatures to stay below that limit. Stated differently, a carbon budget is the area under a carbon dioxide (CO₂) emission trajectory that satisfies assumptions about limits on cumulative emissions estimated to avoid a certain level of global mean surface temperature rise.

Carbon dioxide equivalent (CO₂e): A way to place emissions of various radiative forcing agents on a common footing by accounting for their effect on climate. It describes, for a given mixture and amount of greenhouse gases, the amount of CO₂ that would have the same global warming ability, when measured over a specified time period. For the purpose of this report, greenhouse gas emissions (unless otherwise specified) are the sum of the basket of greenhouse gases listed in Annex A to the Kyoto Protocol, expressed as CO₂e assuming a 100-year global warming potential.

Carbon intensity: The amount of emissions of CO₂ released per unit of another variable such as gross domestic product, output energy use or transport.

Carbon offset: See *Offset*.

Carbon price: The price for avoided or released CO₂ or CO₂e emissions. This may refer to the rate of a carbon tax or the price of emission permits. In many models that are used to assess the economic costs of mitigation, carbon prices are used as a proxy to represent the level of effort in mitigation policies.

Carbon sequestration: The process of removing carbon from the atmosphere and depositing it in a reservoir.

Carbon stock: The quantity of carbon contained in a carbon pool or reservoir.

Carbon tax: A levy on the carbon content of fossil fuels. Because virtually all of the carbon in fossil fuels is ultimately emitted as CO₂, a carbon tax is equivalent to an emission tax on CO₂ emissions.

Co-benefits: The positive effects that a policy or measure aimed at one objective might have on other objectives, without yet evaluating the net effect on overall social welfare. Co-benefits are often subject to uncertainty and depend on, among others, local circumstances and implementation practices. Co-benefits are often referred to as ancillary benefits.

Conditional INDC: INDC proposed by some countries that are contingent on a range of possible conditions, such as the ability of national legislatures to enact the necessary laws, ambitious action from other countries, realisation of finance and technical support, or other factors.

Conference of the Parties (COP): The supreme body of the Convention. It currently meets once a year to review the Convention's progress.

Current policy trajectory: This trajectory is based on estimates of 2020 emissions considering projected economic trends and current policy approaches including policies at least through 2012. Estimates may be based on either official data or independent analysis.

Double counting: In the context of this assessment, double counting refers to a situation in which the same emission reductions are counted towards meeting two countries'

Greenhouse gases: The atmospheric gases responsible for causing global warming and climatic change. The major greenhouse gases are carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O). Less prevalent, but very powerful, GHGs are hydrofluorocarbons (HFCs), perfluorocarbons (PFCs) and sulphur hexafluoride (SF₆).

Gross domestic product: The sum of gross value added, at purchasers' prices, by all resident and non-resident producers in the economy, plus any taxes and minus any subsidies not included in the value of products in a country or geographic region for a given period, normally one year. Gross domestic product is calculated without deducting for depreciation of fabricated assets or depletion and degradation of natural resources.

Integrated Assessment Models: Models that seek to combine knowledge from multiple disciplines in the form of equations and/or algorithms in order to explore complex environmental problems. As such, they describe the full chain of climate change, from production of greenhouse gases to atmospheric responses. This necessarily includes relevant links and feedbacks between socio-economic and biophysical processes.

Intended Nationally Determined Contribution (INDC): Submissions by Parties which identify actions each national government intends to take under the Paris Agreement. INDCs are, in effect, the basis of post-2020 global emission reduction commitments included in the Paris Agreement.

International Cooperative Initiatives (ICIs): Initiatives outside the UNFCCC aimed at reducing emissions of climate forcers by, for example, promoting actions that are less greenhouse gas intensive, compared to prevailing alternatives. Cooperative initiatives also involve national and sub-national partners (they are often referred to as, simply, 'cooperative initiatives').

Kyoto Protocol: An international agreement, standing on its own, and requiring separate ratification by governments, but linked to the UNFCCC. The Kyoto Protocol, among other things, sets binding targets for the reduction of greenhouse gas emissions by industrialized countries.

Land use, land-use change and forestry (LULUCF): A
