### Acknowledgements

This document is a product of UNEP's project "An Ecosystem Approach to Restoring West African Drylands and Improving Rural Livelihoods through Agroforestry-based Land Management Interventions".

We gratefully acknowledge the Governments of Burkina Faso, Mali, Mauritania, Niger and Senegal for their participation in this project, and particularly the Government of Mali for hosting the project. We thank the Government of Norway for providing the principal funding for this project.

We thank all those who provided peer review comments, especially: Dr. Daniel E. Campbell, United States Environmental Protection Agency, Narragansett, RI, USA; Dr. Cecilia Ferreyra, Alberta Environment - Central Region, Canada; Dr. Torbjörn Rydberg, Swedish University of Agricultural Sciences, Uppsala, Sweden; Professor Sergio Ulgiati, Parthenope University of Naples, Italy.

### Project manager:

Gemma Shepherd/UNEP.

# Contents

Figure list	iv
Table list	vii
Abbreviations and Acronyms	viii
Foreword	ix
Preface	x
<b>Summary</b>	<b>11</b>
Natural resource depletion and development decision making	11
Environmental accounting	11
National environmental accounting database	12
Renewable and non-renewable resource use	12
Environmental load	15
Emergy and Money	15
International debt	16
Comparative assessment and time trends for West African nations	16
Valuing the global depletion of natural capital	17
Poverty, resources and human well-being	17
Policy implications	18
<b>1 Introduction to environmental accounting and global database development</b>	<b>21</b>
Focus on Drylands	22
Environmental Accounting	23
Objectives	25
<b>2 Environmental accounting concepts and methods</b>	<b>27</b>
Conceptualizing the System	27
Emergy and Unit Emergy Values	28
Environment-economy interactions	28
<b>3 National Environmental Accounting Database</b>	<b>31</b>
Development of a National Environmental Accounting Database (NEAD)	31
National Environmental Accounting Database Results	35
<b>4 Trends in emergy metrics for West African dryland nations</b>	<b>50</b>
Time Series for Mali	50
Time Series for Five Sahelian Nations	52
<b>5 The global value of natural capital: soil, water, fish and forests</b>	<b>55</b>
Valuing the Global Depletion of Natural Capital	55
Methods for Accounting for Natural Capital Depletion	58
Development of Unit Emergy Values for Natural Capital Stocks	68
Results of Natural Capital Accounting	72
Placing Costs of Natural Capital Depletion in Context	76

<b>6</b>	<b>Environmental accounting of international trade and debt</b>	<b>81</b>
	Environmental Trade Equity	81
	International Debt	85
<b>7</b>	<b>The resource basis of human development and system sustainability</b>	<b>88</b>
	Emergy indices	89
<b>8</b>	<b>Conclusions</b>	<b>99</b>
<b>9</b>	<b>Policy recommendations</b>	<b>101</b>
	<b>References</b>	<b>104</b>
	<b>Appendices</b>	<b>106</b>
	Appendix A: Datasets used in the global emergy database	107
	Appendix B: Energy Systems Language and national systems diagrams	109
	Appendix C: National environmental accounting table	111
	Appendix D: Summary flows and indices for 12 West African economies	119
	Appendix E: Definitions of Indicators	122
	<b>Index</b>	<b>129</b>

# Figure list

Figure A.1	Diagram of a nation showing renewable and non-renewable flows, purchased inputs, exports and interactions.	17
Figure 1.1	Diagram of the interface of environmental and economic systems.	24
Figure 1.2	Conceptual diagram of energy transformations, emergy and the computation of Unit Emergy Values.	25
Figure 1.3	Map of national boundaries of countries in the study.	28
Figure 2.1	Detailed systems diagram of Mali (ca. 2003).	30
Figure 2.2	Generic national diagram with flows of resources, imports, and exports of goods.	31
Figure 2.3	Conceptual depiction of the computation of Unit Emergy Values.	32
Figure 2.4	Biophysical work embodied in production, and money paid for product.	32
Figure 3.1	Schematic of the global emergy database.	34
Figure 3.2	Global flows of emergy from exogenous sources and internal stocks.	37
Figure 3.3	Inputs of emergy from principal renewable sources.	38
Figure 3.4	Global total emergy use (U).	43
Figure 3.5	Global map of indigenous renewable fraction of use.	43
Figure 3.6	Global map of renewable use per area.	44
Figure 3.7	Global map of natural capital depletion.	44
Figure 3.8	Global map of electricity consumption as a fraction of use.	45
Figure 3.9	Global map of total emergy use per area.	46
Figure 3.10	Global map of total emergy use per capita.	46
Figure 3.11	Global map of fuel use per capita.	47
Figure 3.12	Ratio of concentrated to rural use on a national basis.	47
Figure 3.13	Global map of Environmental Loading Ratio (ELR).	49
Figure 3.14	Global map of the Emergy Investment Ratio (EIR).	49
Figure 3.15	Global map of the Emergy Sustainability Index (ESI).	50
Figure 3.16	Global map of the Emergy Money Ratio (EMR).	50
Figure 4.1	Five Sahelian focal nations for time-series analysis.	53
Figure 4.2	Emergy use and imported emergy for Mali, 1965–2001.	53
Figure 4.3	Emergy use per capita and the Emergy Money Ratio for Mali, 1965–2000.	53
Figure 4.4	GDP and fraction of total use from electricity for Mali, 1965–2001.	54
Figure 4.5	Human Development Index, fraction of use from renewable sources, and their product for Mali, 1962–2000.	54
Figure 4.6	Emergy use for five Sahelian nations, 1965–2000.	55

Figure 4.7	Emergy use per area for five Sahelian nations, 1965–2000.	55
Figure 4.8	Emergy use per capita for five Sahelian nations, 1965–2000.	55
Figure 4.9	Fraction of emergy use from renewable sources for five Sahelian nations, 1965–2000.	56
Figure 4.10	Environmental loading ratio for five Sahelian nations, 1965–2000.	56
Figure 4.11	Emergy money ratio (EMR) for five Sahelian nations, 1965–2000.	56
Figure 5.1	Resource basis of a national economy (Mali, 2000).	59
Figure 5.2	Soil organic carbon pool in upper 1-m of soil profile, and mean annual soil-CO <sub>2</sub> emissions, 1980–2004.	61
Figure 5.3	Maps of human-induced soil degradation by cause and severity.	62
Figure 5.4	Extracting soil erosion from global maps.	62
Figure 5.5	Summary of fish stock exploitation by region.	64
Figure 5.6	Total fish and non-renewable fish catch by country, 2000.	65
Figure 5.7	Renewable water resources by country.	66
Figure 5.8	Annual national water use.	66
Figure 5.9	Forest biomass in million tons by nation.	69
Figure 5.10	Annual change in forest cover, 1950–2000.	69
Figure 5.11	Topsoil genesis.	70
Figure 5.12	Chart used to compute UEVs for soils.	71
Figure 5.13	Maps of rainfall emergy, and SOM turnover time.	72
Figure 5.14	Emergy value of total water use.	73
Figure 5.15	Maps of soil Unit Emergy Value, and natural-log emergy of soil loss.	74
Figure 5.16	Maps of total emergy in soil loss by nation.	75
Figure 5.17	Maps of emergy in the global forest stock in 2000.	76
Figure 5.18	Non-renewable forest loss in emergy units for 2000.	76
Figure 5.19	Non-renewable over-fishing losses in emergy units for 2000.	77
Figure 5.20	National emergy flows of natural capital for soil loss, water overuse, overfishing, and deforestation.	80
Figure 5.21	Global summary of natural capital reliance as % of total emergy use.	81
Figure 5.22	Global costs of depletion for natural capital stock examined.	81
Figure 5.23	National-scale natural capital depletion as % of total use, and total emergy flow vs. the emergy sustainability index (ESI).	82
Figure 5.24	GDP vs. fraction of total emergy use from natural capital sources.	82
Figure 6.1	Schematic of international trade equity showing aggregated parameters of trade between Niger and global economy.	84
Figure 6.2	Global map of Emergy Exchange Ratio (EER).	85
Figure 6.3	Emergy exchange ratio and national PPP values.	86

---

Figure 6.4	Map of Export to Import ratio.	87
Figure 6.5	Schematic of debt payments in money and emergy.	88
Figure 6.6	Official debt and emergy debt.	88
Figure 7.1	Well-being and percent renewable, and magnitude of economy.	94
Figure 7.2	Map of the Yale Environmental Sustainability Index and map of emergy percent renewable.	95
Figure 7.3	Non-renewable emergy use per capita and fraction of total use from renewable resources.	96
Figure 7.4	Regression residuals of % renewable vs. prediction of HDI based on % renewable.	97
Figure 7.5	Map of the Total System Wellbeing Index ( $HDI_{adjusted} * \%R$ ).	98
Figure B.1	Definition of systems symbols.	111
Figure B.2	Systems diagrams of Mali showing multiple levels of aggregation.	112
