

Mainstreaming Disaster Risk Reduction in Sustainable Development

**Key concepts and challenges in the
Asia-Pacific region**

Development

- Development means “improvement in a country's economic and social conditions”.
- More specifically, it refers to improvements in ways of managing an area's natural and human resources in order to create wealth and improve people's lives (and happiness)
- Development has economic, social and environmental dimensions that are closely interrelated

Three dimensions of development

Sustainable development is a development strategy that balances the needs of society, economy and environment.

Indicators

SDGI

How economic development promotes social justice and equity for all sections of society

Indicators –

HDI, GDI, inclusive development

How wealth is generated and how wealthy a country is

Indicators –

GDP, Per Capita Income

How natural environment is protected and natural resources are used in a sustainable manner

Indicators –

EPI, Ecological footprint

“development that meets the needs of the present without compromising the ability of future generations to meet their own needs”

Disasters

Disaster = *Dis* (bad) + *Astor* (star)

Risks of disaster = [{ h x v } x e] ÷ c

h = Hazards - *Potentiality* of a physical event that may cause loss of life or property

v = Vulnerabilities - *Factors or processes* - physical, social, economic, and environmental - which increase susceptibility of an area or a community to impact of hazards

e = Exposure – *Exposure* to the hazards

c = Capacities - *Strengths and resources* available within a community, society or organization that can reduce the level of risk, or the effects of a disaster.

Disaster and Development

Three dimensional view

**Disasters erode gains
of development**

**Deficits in
development create
risks of disasters**

**Development creates
new risks of disasters**

**DISASTERS ERODE GAINS OF
DEVELOPMENT**
