Challenges & opportunities in reconstruction of disaster effected areas

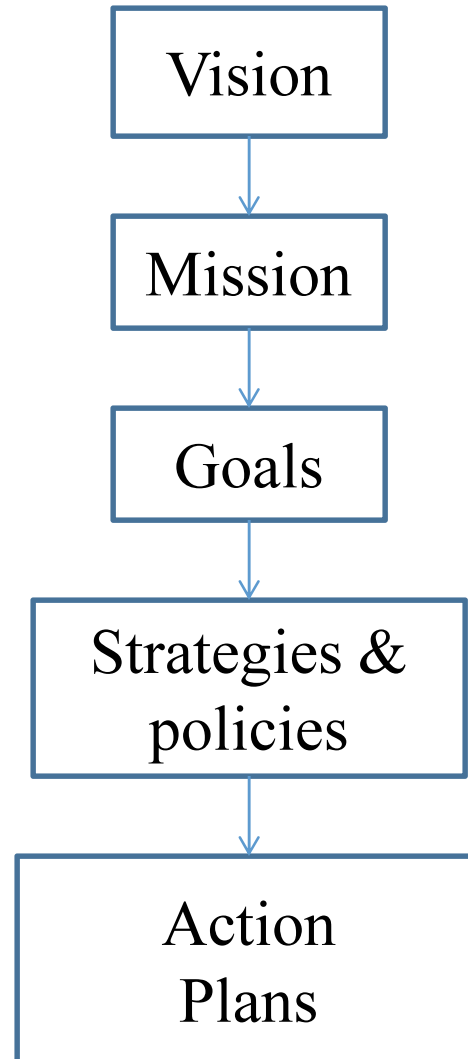

Prof. M. Shekarchzadeh
President of Head of Road, Housing and Urban Development
Research Center
(BHRC)

Reconstructed Areas in Iran (more than 1.300.000 houses)

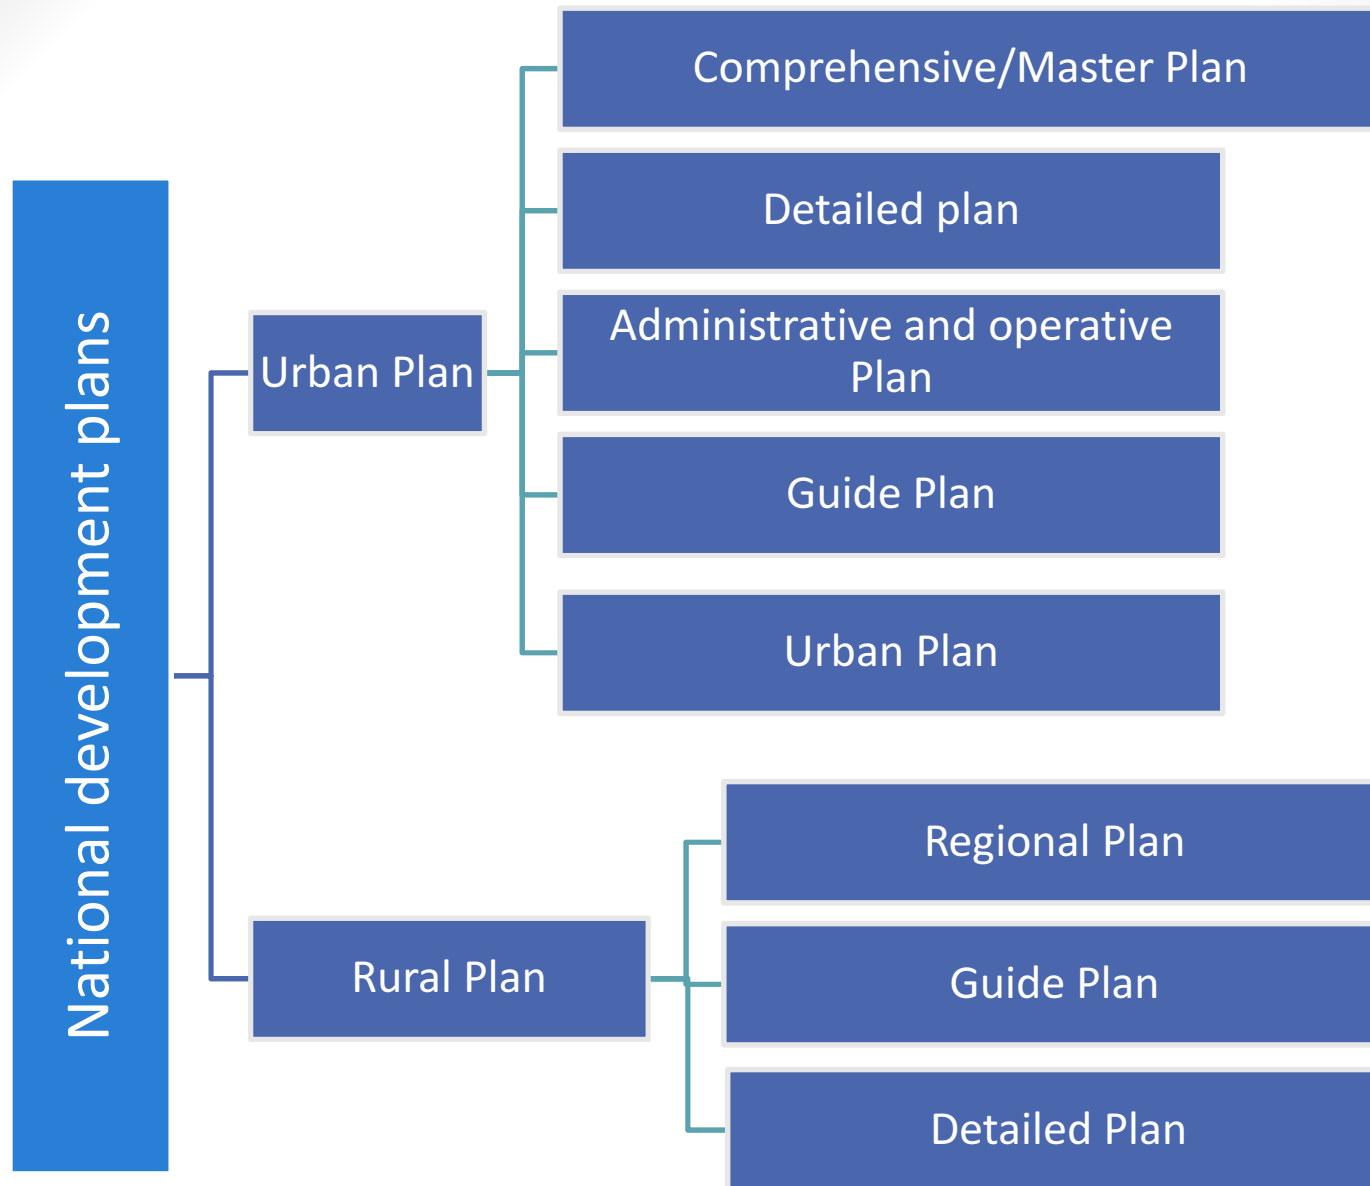

Planning Process

Specifying the level of reconstruction in disaster damaged area

- It should be specified regarding the potential and current capacities.
- Researches and experiences in Iran show that planning with ambitious goals as usual are not going toward success.
- On the other hand decision makers should consider the reconstruction as an opportunity for development .
- Thus, level of reconstruction should conform with real capacities.

Reconstruction process is an opportunity to realize exciting plans

Architectural Rules and Requirements

Architectural Design

Quality control in providing material

Building Codes

Supervision network
