

The Governance Challenge

Dr. Shaleen Singhal
Head, Department of Policy Studies
TERI University, New Delhi

UN ESCAP NIUA Regional Policy Dialogue on
Sustainable Urbanisation in South Asia, 18th Dec. 2014

Consensus

- Population growth and migration (slow or rapid) to cities has led to increased pressure on already inadequate infrastructure and basic services
- Resultant degradation of environmental conditions - impact on human health and quality of life
- Cities in India rank low on sustainability and competitiveness globally
- Ineffective governance and management systems and lack of conducive business environment.

Consensus

- Drivers of national economies than urban liabilities
- Cities facilitate diversity, provide opportunities for innovation and promote economies of scale and choices
- Urban areas contribution > 60% to Indian GDP
- Built environment contributes 17.5% to Indian GDP (at par with US, Australia, Japan ~15-18%)
- Infrastructure investment - 1 trillion USD over 2012-17
- Inclusive growth is priority and domestic investment and FDI to facilitate it.

Complementing thoughts

- Cities can turn smart if and only if rural hinterland is self contained with access to opportunities & services
- ‘Smart’ shall relate to livable and sustainable cities, humane to inhabitants
- Overarching strategy of good governance with coherent policy approach and emphasis on safety, quality of life and improvement in institutional, physical, social and economic infrastructure is vital for all cities
- However interpretation of smart and sustainable is unique for each city – stage of development, resources and citizen’s local priorities.

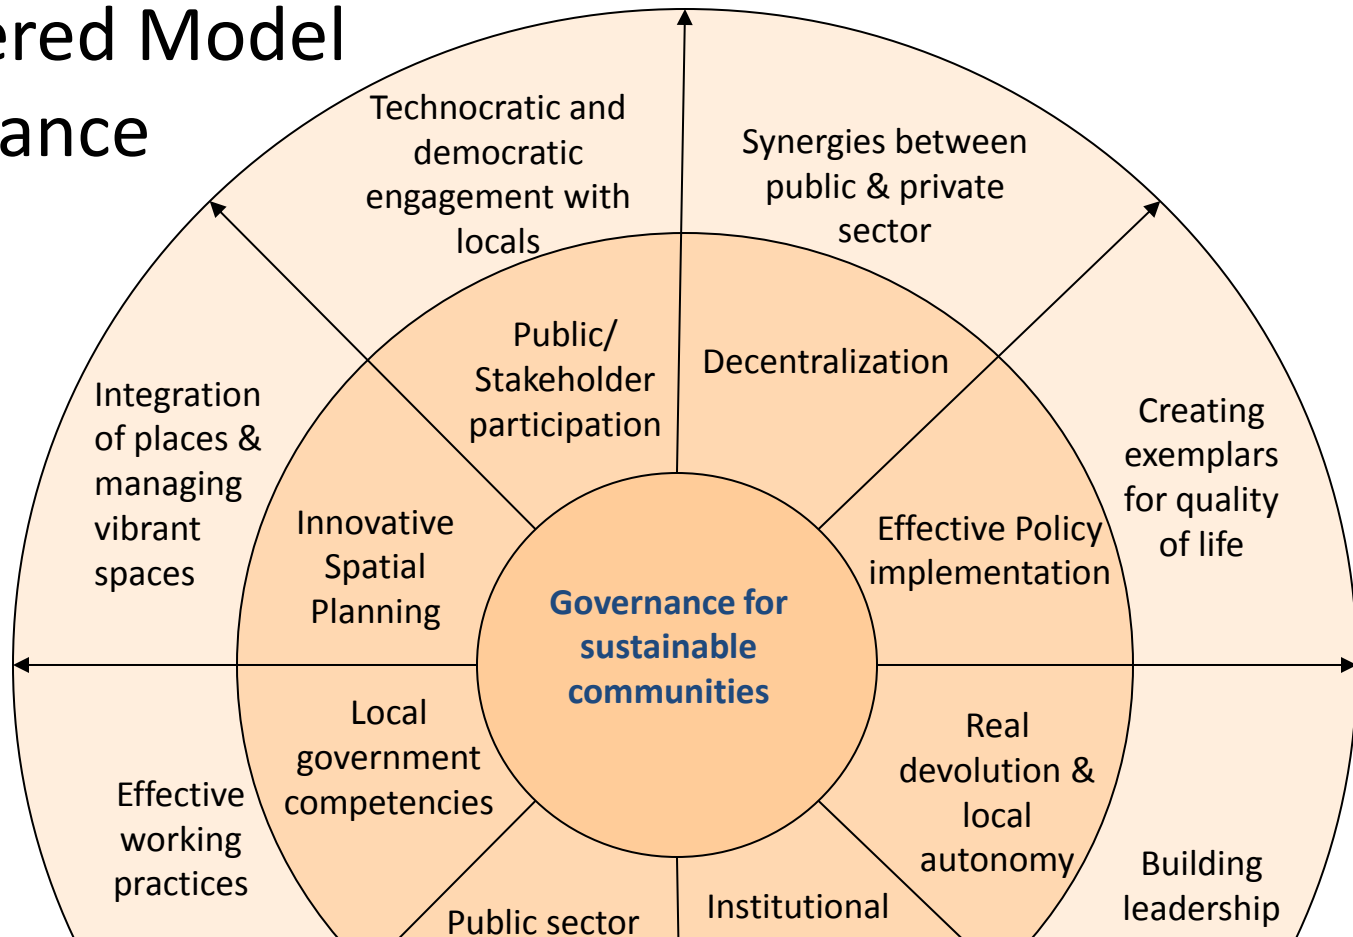

Examples of unique propositions

- Metro cities aiming to be globally competitive, to counteract on inherent challenges to optimise energy and resource consumption while capturing new growth opportunities
- Growth in the value of real estate in city-region should be effectively realised and channelised to finance city services and infrastructure
- Technological advancement with ICT integration to facilitate efficient delivery of services and creating low carbon infrastructure.
- Business sector to be acknowledged upfront as a resource-efficient partner and stakeholder.

Examples of unique propositions

- Upcoming million plus cities to attract potential for growth in manufacturing sector to enhance quality employment
- Cities challenged to deliver basic services & amenities need urgent departure from conventional approaches and adopt smarter and advanced city management and planning techniques.

Flexible Tiered Model for Governance
