The Sustainable Urban Transport Index (SUTI) has been developed by UNESCAP to help summarize, track and compare the performance of Asian cities with regard to sustainable urban transport and the related Sustainable Development Goals (SDGs), more specifically target 11.2. This report has been prepared to introduce current urban transport system of Ulaanbaatar, the Capital City of Mongolia as well as collection and analysis of urban transport data for application of SUTI in Ulaanbaatar.

The objective of SUTI is to evaluate the status of urban transportation system in cities. SUTI is a quantitative tool for member States and cities of the region to compare their performance on sustainable urban transport systems and policies with peers. It can help identify additional policies with peers. It can help to identify additional policies and strategies required to improve the urban transportation systems and services. It includes ten indicators in system, economic environmental and social domains. SUTI is also expected to make an assessment of the progress of transportation contribution towards achievement of SDGs.

SUTI has been successfully applied in 15 cities; Colombo, Hanoi, Kathmandu and Greater Jakarta in 2017 and Bandung, Dhaka, Ho Chi Minh City, Surabaya, Surat and Suva in 2018, Bhopal, Khulna, Thimphu, Tehran and Ulaanbaatar in 2019. The cities found the SUTI framework adequate to measure the status and useful in identifying strategies towards sustainable mobility.
