

UNITED NATIONS

Way to go further

**Development of integrated Transport and
Logistics System in ASEAN countries and
the Pacific Sub-region**

Somsak Wisetruangrot

President

Thai International Freight Forwarders Association

Way to go further

- Basic Infrastructure creates only “Interconnectivity” and that is only single dimension, but still need to further identify in some areas.
- To drive for the real Market Access can only be created by “Interoperability” by simplifying, harmonizing rules and regulations along the corridors.

1. Efficient Interoperability of cross border

- **Physical Cross Border: Need to Know**
 - Goods (what commodity/which volume/where to where)
 - Vehicles and equipments
 - Human (passengers/traders/transporter)
- **Institutional Cross Border: Need to Agree**
Non-Agreement
Bilateral / Multilateral Agreement

2. Identify high potential Corridors

- Identify domestic linkage between port, rail, road, inland waterway port and airport with Dry port in the member state
- Study, evaluate and analyze problem/constraint and opportunity in **most high potential transport corridors** in the region to create **real** economic corridors

3. Identify Multimodal Transport Corridors

- Identify relevant gateways/hub in member states
- Simplify customs procedure for mode-shift
- Identify place to make mode-shift
- Possibility using Dry Port

4. Connecting the economic development along the borders, set up production base.

- Government policy/Private Sectors Opportunity in setting up location of production base to connect with the border creating economic development in the corridors.
- Study goods flow and back haul system including using Dry Port/Warehouse as Distribution Center

5. Study on Benefit sharing in interconnectivity and interoperability among relevant member states

- Identify benefit of interconnectivity along the corridors
- Identify possibility of benefit sharing among relevant parties : how to share in win/win
