(I) The Contemporary Approaches to Digital Inclusion and Broadband Development in Developing Countries

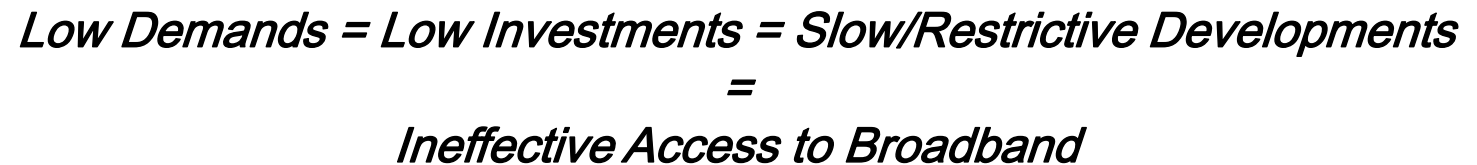

The basic overview of the contemporary broadband development model endorsed by the World Bank, ITU, International Academia & OECD Nations

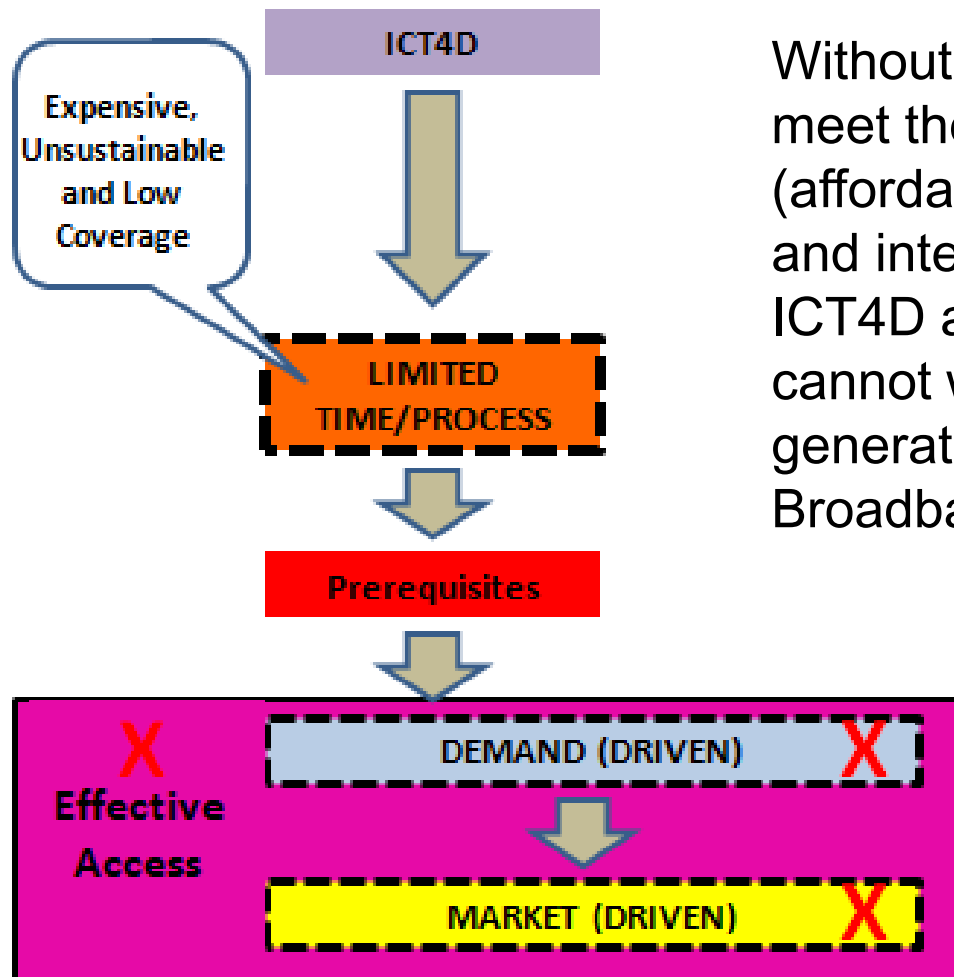

(II) Problems with Contemporary Approach to DI & BD in Developing Countries

Low Demands = Low Investments = Slow/Restrictive Developments
=
Ineffective Access to Broadband

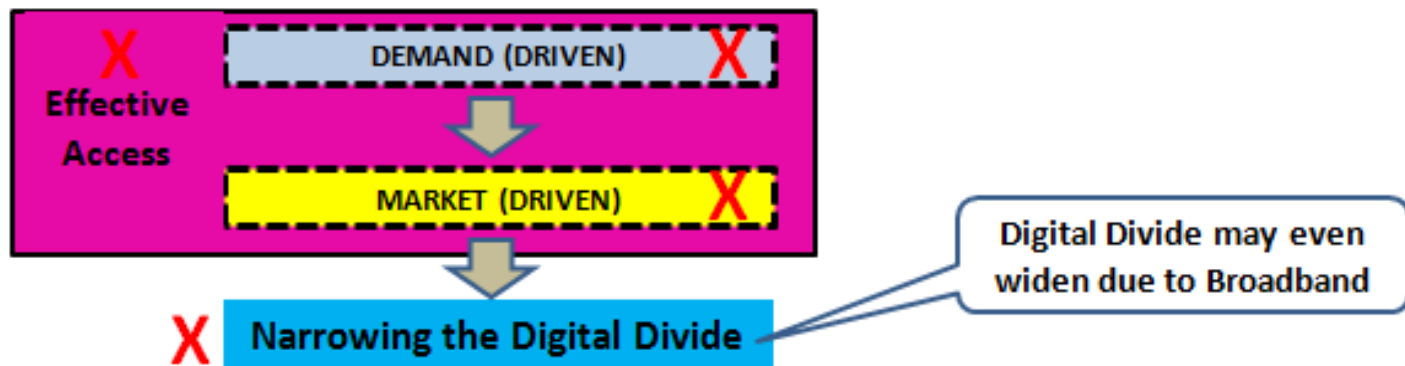

(II) Problems with Contemporary Approach to DI & BD in Developing Countries (Cont. 2)

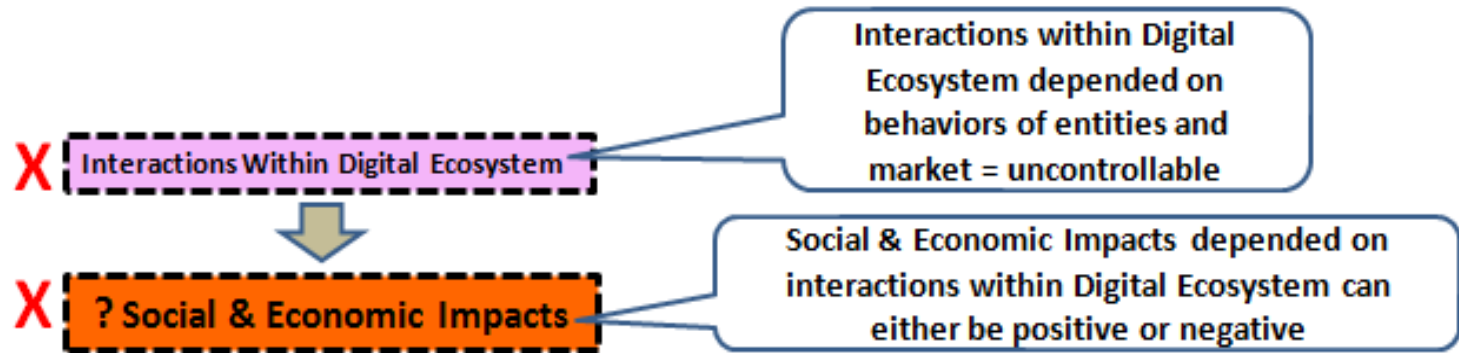

Without real markets that can meet the demands (affordability, usability, needs and interests) of the people ICT4D aim to help; ICT4D cannot work in the long run to generate demands for Broadband or ICT

(II) Problems with Contemporary Approach to DI & BD in Developing Countries (Cont. 3)

Low Demands + Restrictive Markets
+
Broadband Accelerated Technological Advancement
=
Possible Widening of the Digital Divide

(II) Problems with Contemporary Approach to DI & BD in Developing Countries (Cont. 4)

Demands + Markets + Interactions of Entities
=

Positive or Negative or What??? Social & Economic Impacts

The access Broadband (ICT and the Internet) in itself cannot determine how Broadband will be used; it will depends on the interactions of entities within the Digital Ecosystem that will determine the social and economic impacts of Broadband Development which in itself may or may not necessarily lead to the public good.

“Good” or “Bad” GDP Growth?

(III) Framework of Meaningful Broadband

Definitions

Broadband Ecosystem

Five Domains of Innovation
