

UNFPA Indonesia COVID-19 Response Situational Report

1 July - 31 August 2020

SYAHRUNI: A REPRODUCTIVE HEALTH HERO IN DISASTER RESPONSE

At least 38 people were killed, 10 disappeared, and around 15,000 (4,897 households) are sheltering in internally displaced people (IDP) camps in 11 spots (as of 19 August 2020, BNPB) after floods and landslides struck six districts in North Luwu, South Sulawesi, on 13 July. Syahruni, the Public Health Coordinator of the North Luwu Health Office, took on the task of coordinating the District Reproductive Health sub-cluster. Her first experience working in disaster response, Syahruni ensures the needs of women and newborn babies sheltering in IDP camps are met. Despite additional challenges in facing risks of Coronavirus infection among survivors and aid workers, Syahruni and team stay committed. "We are always motivated to serve the people," she says.

HIGHLIGHTS

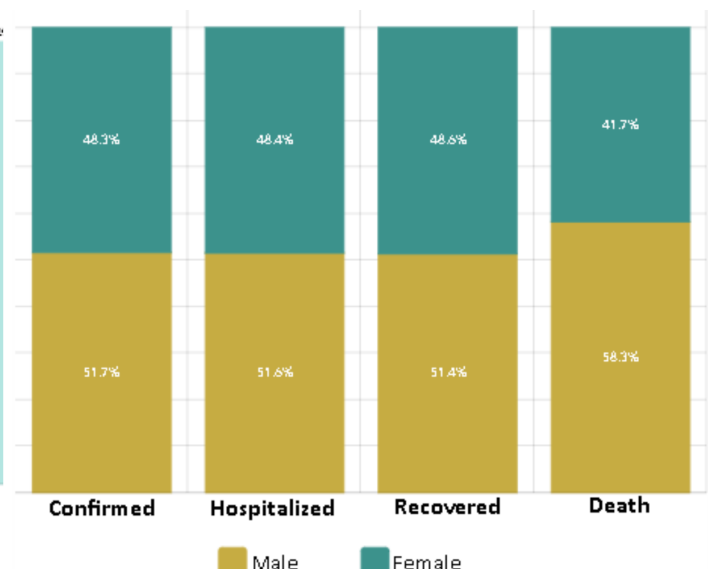

- As of 31 August 2020, the Government of Indonesia announced 174,796 confirmed cases of COVID-19, 7,417 deaths, and 125,959 recovered cases.
- UNFPA has initiated distributing dignity kits and reproductive health tent to save the lives of women and girls affected by the recent flooding and landslides in North Luwu, with support from Australia’s Department of Foreign Affairs and Trade (DFAT).
- UNFPA supported the National Population and Family Planning Board (BKKBN) with the development and sensitization of the Operational Guidelines on Contraceptive Availability in crisis situations
- In celebration of the International Youth Day and World Humanitarian Day, UNFPA hosted an event entitled [“Youth as Content Leaders”](#) on 14 August to highlight youth’s role in humanitarian response, including during the pandemic.

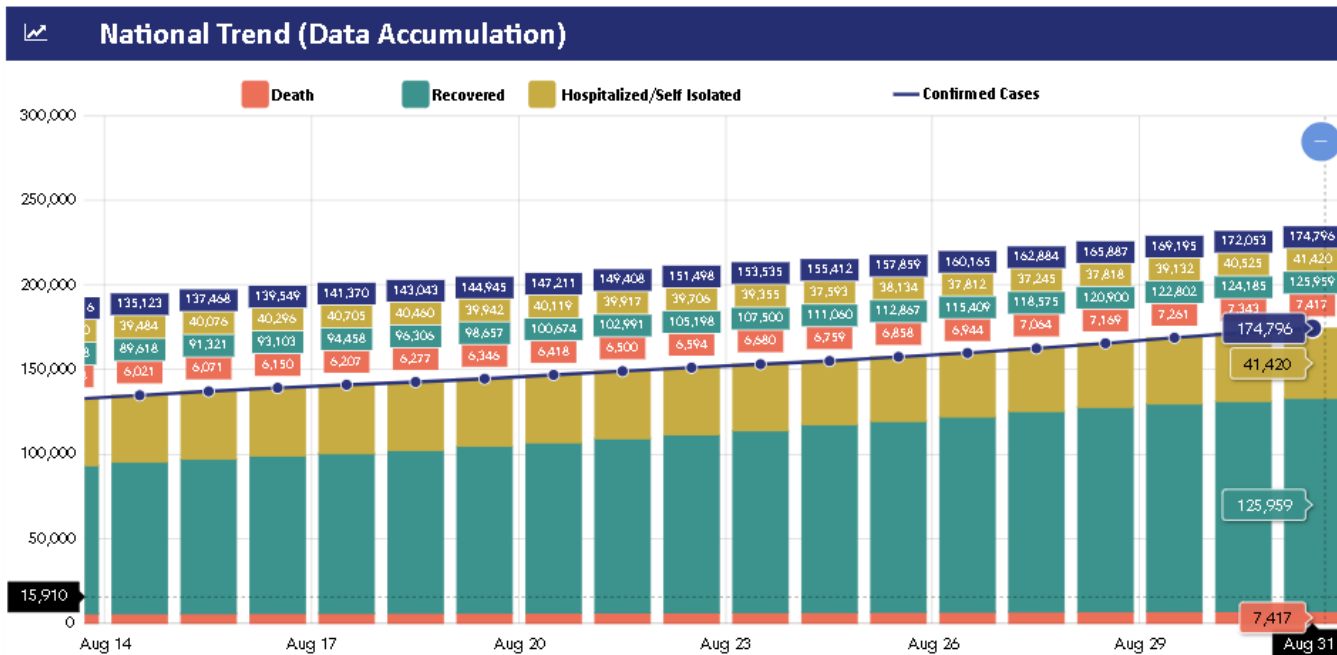

CONFIRMED CASES BY AGE GROUP

CONFIRMED CASES BY SEX

EXPECTED IMPACT OF COVID-19 ON THE "3 ZEROES" IN INDONESIA

MATERNAL MORTALITY - LIKELY TO IMPACT THE PROVISION OF RH SERVICES

28% of puskesmas/health centers are not fully functioning as per operational hours.

84% of puskesmas experience reduction in number of visits

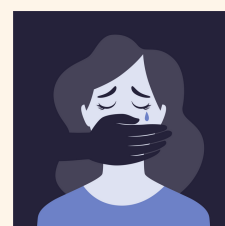

UNMET NEEDS FOR FAMILY PLANNING - POTENTIAL INCREASE

40% of reduction of new FP users in March compared to February 2020

GENDER BASED VIOLENCE - POTENTIAL INCREASE in GBV in 2020 compared to 2019

UNFPA STORIES

INDONESIA ONE DISASTER DATA ENSURES BETTER COORDINATION DURING HUMANITARIAN CRISES

10 AUGUST 2020

The availability of accurate and easy-to-use baseline disaster statistics data and information is very important for disaster preparedness and response. In the event of a disaster, data and information can assist decision-makers in formulating the best steps to take, and allow for more precise analyses in determining total populations affected, vulnerable groups, and public

infrastructure exposed to hazards in a region. The National Disaster Management Agency (BNPB) and BPS-Statistics Indonesia, with technical guidance of UNFPA Indonesia, developed Indonesia One Disaster Data. An integral part of Indonesia One-Data coordination mechanism, this national disaster-related statistics framework ensures data credibility, consistency, interoperability, and international comparability.

COMMUNITY OF PRACTICE: A SUPPORT SYSTEM FOR YOUNG CONTENT CREATORS

20 AUGUST 2020

UNFPA Indonesia started a Community of Practice (CoP) for young digital Sexual and Reproductive Health (SRH) content creators in June 2020. The CoP is a network of youth influencers and youth-led digital platforms that produce youth SRH-related content. The CoP serves as a knowledge management platform to share best practices, tools, research,

and other resources among creators and practitioners. It currently consists of 22 members, ranging from individual influencers, civil society organizations (CSOs), media companies, private enterprises, and international non-governmental organizations (NGOs). Representing different regions of Indonesia—from Java to Papua—the members have a combined audience of over 200,000 young people.
