

# IS IT SAFE TO HAVE THE COVID-19 VACCINE IF I AM PREGNANT?

There is no known risk associated with non-live vaccines, such as the Pfizer-BioNtech or Oxford-AstraZeneca vaccines during pregnancy

Expectant mothers should be vaccinated when:

- risk of exposure is high, (such as front-line workers)

The vaccines used do not cause Covid-19 infection in mothers or their unborn children

- or they have underlying conditions such as hypertension or asthma

**All vaccinated mothers must continue to wear face coverings, social distance and wash their hands regularly to reduce the spread of Covid-19**

For more information, talk to your midwife or get further information on your country's vaccine policy for pregnant women at: XXXX

## SHOULD I HAVE A COVID-19 VACCINE IF I AM BREASTFEEDING?

There is no known risk associated with non-live vaccines, such as the Pfizer-BioNTech or Oxford-AstraZeneca vaccines for breastfeeding mothers or infants who receive breastmilk

Breastfeeding mothers who are frontline workers or who are vulnerable should be offered COVID-19 vaccination

**All vaccinated mothers must continue to wear face coverings, social distance and wash their hands regularly to reduce the spread of Covid-19**

For more information, talk to your midwife or get further information on your country's vaccine policy for breastfeeding women at: XXXX
