

INTRODUCTION

The 2019 Population and Housing Census was implemented at 0:00 am on 1 April 2019 in accordance with the Decision No. 772/QĐ-TTg of the Prime Minister dated 26 June 2018. The 2019 Census aimed to collect basic information on population and housing throughout the territory of the Socialist Republic of Viet Nam to serve the planning of socioeconomic development policies of the country and the monitoring of the Government of Viet Nam’s progress toward the Sustainable Development Goals it committed to.

In order to systematize and document the Census results as well as provide a convenient information search tool for data users, the General Statistics Office has built a data warehouse on the 2019 Population and Housing Census. In addition to the Census-related documents such as the Census Project, questionnaires, manuals and publications, the data warehouse also provides flexible data extraction tools by several indicators and classification depending on the purpose of data users.

The General Statistics Office is pleased to introduce the data warehouse on the 2019 Census – a valuable and useful information source for policy makers, managers, researchers and the whole of society. Despite spending a lot of time and effort in synthesizing and compiling, shortcomings and limitations are unavoidable. We look forward to receiving constructive comments to enable improvement in future upcoming publications.
