WHY DO SOME WOMEN EXPERIENCE MORE VIOLENCE BY HUSBANDS THAN OTHERS?

FULL REPORT

**Results of the analysis of risk
factors for violence by husbands**

Contents

List of figures	7
List of tables	8
Foreword	9
Acknowledgements	11
Acronyms and abbreviations	12
Executive summary	13
1. Introduction	19
2. Theoretical framework	22
3. Methods	26
4. Results and discussion	35
4.1. Women's socio-demographic characteristics	35
4.2. Women's experience with other violence (by other perpetrators)	53
4.3. Women's attitudes and beliefs on wife beating	55
4.4. Partner's socio-demographic characteristics	56
4.5. Partner's behaviour	57
4.6. Partner's experience with violence in his childhood	59
4.7. Characteristics of the couple/relationship	60
4.8. Children of respondent	61
4.9. Socio-economic status	63
4.10. Social capital	63
4.11. Geographical characteristics	67
5. Strengths and limitations of this analysis	68
6. Conclusions and recommendations	71
Annex 1. Organization, questionnaire and operational definitions used in the National Study on Domestic Violence	78
Annex 2. Overview risk factor analysis in other studies using the same or similar questionnaire	82
Annex 3. Method to develop an index for Socio-economic Status - Vietnam Violence against Women Study	91
Annex 4. Distribution of risk factors and prevalence of current physical or sexual violence by partners, among entire sample of ever partnered women in Viet Nam (N=4456)	106

List of figures

- Figure 1 Ecological model of factors associated with intimate partner violence
- Figure 2 Number of women in the survey according to their partnership status and their experience of physical and/or sexual partner violence
- Figure 3.1 Prevalence of physical or sexual violence by husband in the past 12 months, by women's age and level of education
- Figure 3.2 Prevalence of physical or sexual violence by husband in the past 12 months, by women's age of marriage and current marital status
- Figure 3.3 Prevalence of physical or sexual violence by husband in the past 12 months, by women's ethnic group, religion, earning cash and household assets index
- Figure 3.4 Prevalence of physical or sexual violence by husband in the past 12 months, by women's attitudes to wife beating and experience of non-partner physical and sexual violence
- Figure 3.5 Prevalence of physical or sexual violence by husband in the past 12 months, by women's age at first sex, nature of first sex and by their mother's experience with violence by husbands
- Figure 3.6 Prevalence of physical or sexual violence by husband in the past 12 months, by husband's age, educational level and employment status
- Figure 3.7 Prevalence of physical or sexual violence by husband in the past 12 months, by husband's frequency of drinking, drug use and whether he ever has fights with other men
- Figure 3.8 Prevalence of physical or sexual violence by husband in the past 12 months, by husband's extramarital relationships and according to whether husband's mother has been abused or husband has been abused as a child
- Figure 3.9 Prevalence of physical or sexual violence by husband in the past 12 months, by the couple's differences in age, education, financial contribution to the household and according to who participated in the partner choice
- Figure 3.10 Prevalence of physical or sexual violence by husband in the past 12 months, by women's number of children and the sex of their children
- Figure 3.11 Prevalence of physical or sexual violence by husband in the past 12 months, by proximity and supportiveness of family of birth, husband's family, community/neighbours and group membership
- Figure 3.12 Prevalence of physical or sexual violence by husband in the past 12 months, by geographical region and urban/rural location
- Figure 4 Risk factors identified for experiencing physical and/or sexual violence by a husband in the past 12 months
- Figure A1.1 Card with pictorial representation of response to a question on sexual abuse before age 15: crying face indicates "yes"; smiling face indicates "no"
- Figure A2.1 Distribution of household SES score in Viet Nam (urban & rural)

List of tables

- Table 1 Independent variables used for risk factor analysis for current partner violence (the first category is used as baseline)
- Table 2 Associations of characteristics of respondents, their partners, their relationships and their community with current (past 12 months) experience of physical or sexual intimate partner violence among ever partnered women in Viet Nam; univariate and multivariate logistic regression analysis
- Table A3.1 Description and frequency of SES variables
- Table A3.2 Description of SES variables used in PCA analysis
- Table A3.3 Results from principal components analysis
- Table A3.4 Mean socio-economic scores by SES group (N=4837)
- Table A3.5 Mean ownership of SES variables by SES group (N=4837)
- Table A3.6 Distribution of household SES by urban and rural location (total sample analysis, urban sample analysis and rural sample analysis)
