RH	Sexual and Reproductive Health
STI	Sexually Transmitted Infections
TBA	Traditional Birth Attendant
TFR	Total Fertility Rate
TOT	Training of Trainers
UNFPA	United Nations Population Fund; and UN: United Nations

Acknowledgements

This report documents the findings of a qualitative study conducted during April and May, 2007 by medical anthropologist, Dr. Nguyen Tran Lam, on reproductive health in Ha Giang province.

I would like to thank Dr. Lam for his dedication and hard work in completing the research study. Thanks also to UNFPA staff members, Ms. Mere Kisekka, Dr. Duong Van Dat and Dr. Nguyen Tien Dung, for their constructive support, input and comments.

In Ha Giang province, the UNFPA Project Manager, Mr. Nong Van Thanh, assisted Dr. Lam in setting up interviews in Meo Vac district. Health staff of the Meo Vac Health Department and the Can Chu Phin health centre also contributed to the success of the field study. Finally, our appreciation goes to the interviewees from the H'mong community in Ha Giang town and Meo Vac district. This study could not have been completed without their cooperation and enthusiasm.

On behalf of UNFPA, I uphold the view that the findings in this report will be particularly useful to policy makers, programme managers, health professionals and donors in designing and implementing more appropriate reproductive health programmes for ethnic minorities in general and H'mong people in particular; in alignment with Millennium Development Goals and commitments of the International Conference on Population and Development.

Ian Howie

Representative

UNFPA in Viet Nam
