Contents

Foreword by Audrey Azoulay, <i>Director-General of UNESCO</i>	vi
Foreword by Gilbert F. Hounbo, <i>Chair of UN-Water and President of IFAD</i>	vii
Preface	viii
WWDR 2021 Team	x
Acknowledgements	xi
Executive summary	1
Prologue The state of water resources	11
Water demand and use.....	12
Water availability	13
Water quality	13
Extreme events.....	15
Water, sanitation and hygiene (WASH).....	15
Water-related ecosystem services.....	16
Chapter 1 Valuing water: Perspectives, challenges and opportunities	17
1.1 Introduction.....	18
1.2 Why value water?	19
1.3 The values of water to society.....	21
1.4 Methods for calculating the values of water	25
1.5 Accounting for subsidies and other incentives in valuations	25
1.6 Reconciling different values and perspectives.....	25
1.7 Principles for valuing water for sustainable development	27
1.8 The approach of the <i>World Water Development Report</i>	28
Chapter 2 Economic valuation of the source	29
2.1 Introduction.....	30
2.2 The environmental dimensions of the resource – A key consideration	30
2.3 Valuing the environment	31
2.4 Methods used to calculate values.....	33
2.5 Approaches that support valuing the environment–water relationship	38
2.6 Alternative sources: Water reuse, desalination and supply augmentation.....	40
2.7 Constraints and challenges	42
Chapter 3 Valuation of hydraulic infrastructure	43
3.1 Introduction.....	44
3.2 Values of global benefits of water infrastructure	45
3.3 Methods and approaches to the valuation of hydraulic infrastructure.....	45
3.4 Valuing risk and resilience	51
3.5 Ways forward	54

Contents

Chapter 4 Valuing water supply, sanitation and hygiene (WASH) services in human settlements	55
4.1 Introduction.....	56
4.2 The value of WASH services	56
4.3 Values and supplemental benefits of access to WASH services.....	58
4.4 Accessing WASH: Subsidies and affordability	64
Chapter 5 Food and agriculture	67
5.1 Introduction.....	68
5.2 The multiple benefits of water for food production	68
5.3 Impacts and costs of inefficient use of water for food production	71
5.4 Scalable solutions for valuing water for food production.....	72
Chapter 6 Energy, industry and business.....	79
6.1 Context	80
6.2 Water use	80
6.3 The case for water valuation in the EIB sector	81
6.4 Approaches to water valuation.....	82
6.5 The monetization of water	85
6.6 Accounting for the environment.....	91
6.7 Stakeholders, corporate social responsibility (CSR) and stewardship	92
6.8 Future value for EIB – Succeeding and surviving.....	93
Chapter 7 Culture and the values of water.....	97
7.1 Introduction.....	98
7.2 Methods of categorization, assessment and analysis of cultural values.....	99
7.3 Faith-based values.....	99
7.4 Indigenous peoples' values systems, place-based water stewardship and customary laws	100
7.5 Collective normative values	102
7.6 The values of water for peace, security and transboundary cooperation.....	103
7.7 The values of water for mental health and life satisfaction	105
7.8 Integrating cultural values into decision-making.....	105
7.9 Heritage and water values	106
7.10 Creating wider space for cultural values	106
Chapter 8 Regional perspectives.....	107
8.1 Sub-Saharan Africa.....	108
8.2 The Pan-European region.....	110
8.3 Latin America and the Caribbean	113
8.4 Asia and the Pacific.....	116
8.5 The Arab region	118

Contents

Chapter 9 Enabling multi-value approaches in water governance	121
9.1 The increasing emphasis on bringing multiple perspectives into water governance..	122
9.2 Challenges in bringing multiple values to bear on water governance.....	122
9.3 Pathways towards multi-value water governance processes	126
9.4 Conclusions	131
 Chapter 10 Financing and funding water services: Challenges and opportunities for valuing water	133
10.1 Introduction.....	134
10.2 Valuation of infrastructure investments and financing decisions	135
10.3 Accounting for the scarcity value of water	137
10.4 Financial viability of water infrastructure investments.....	138
10.5 Subsidizing water, sanitation and hygiene (WASH) services	141
10.6 Conclusions	142
 Chapter 11 Knowledge, research and capacity development as enabling conditions	143
11.1 Introduction.....	144
11.2 Knowledge building and sharing	144
11.3 Local and indigenous knowledge.....	148
11.4 Transdisciplinary and participatory research	149
11.5 Capacity development	150
 Chapter 12 Conclusions.....	153
12.1 What is the value of water... <i>to whom?</i>	154
12.2 Recognizing and overcoming complexities.....	154
12.3 Addressing conflicting views.....	156
12.4 Coda	156
 References	157
 Abbreviations and acronyms	186

Boxes, figures and tables

Boxes

Box 1.1	Value and valuation: definitions.....	18
Box 1.2	Categories of economic values	22
Box 1.3	Values of water in food and agriculture – Showcasing the diversity of approaches and the main challenges to estimations	23
Box 1.4	Some examples of methods to calculate values of water	26
Box 1.5	The impact of including subsidies and other incentives in accounting for the values of water	27
Box 1.6	The Bellagio Principles for Valuing Water.....	28
Box 2.1	The System of Environmental Economic Accounting for Water – The SEEA-Water.....	34
Box 2.2	Application of a stepwise approach to identify options for optimizing ecosystem services in the Kala Oya River basin in Sri Lanka.....	36
Box 2.3	Estimating the impact of upstream biological oxygen demand (BOD) on downstream Gross Domestic Product (GDP)	37
Box 2.4	Estimating the value of surface water pollution accidents (SWPAs) in China.....	38
Box 2.5	Water stewardship.....	40
Box 3.1	Experiences with the valuation of large dams	44
Box 3.2	Valuations help identify how green infrastructure supports grey infrastructure – The case of the Itaipu Dam in Brazil	46
Box 3.3	Why and how to value water infrastructure assets?	47
Box 3.4	Applying a probabilistic cost–benefit analysis (CBA) to the Three Gorges Dam, China.....	47
Box 3.5	Valuing desalination.....	48
Box 3.6	Managed aquifer recharge using green infrastructure: Valuing costs and benefits of water supply and other social, environmental and resilience services.....	50
Box 3.7	Valuing optimization of dam storage and release.....	51
Box 3.8	Incorporating civil values and local knowledge in risk reduction strategies	52
Box 3.9	Ecological risk assessments for dam development in Africa.....	53
Box 4.1	Challenges to addressing COVID-19 in informal settlements and other poor or deprived communities.....	59
Box 4.2	Protocols and guidelines on the COVID-19 response on management of water supply in Kenya	60
Box 5.1	Systems of Rice Intensification (more productivity with less water)	74
Box 5.2	Improved irrigation water use efficiency does not always lead to increased availability downstream	75
Box 5.3	The use of treated wastewater to address agricultural water scarcity.....	76
Box 5.4	Water Productivity Open Access Portal (WaPOR).....	78
Box 6.1	Water efficiency, mitigating risks and water value	82
Box 6.2	Costs and ramifications of pollution	87
Box 6.3	Fostering eco-industrial parks in Viet Nam	88
Box 6.4	Energy water valuation.....	90
Box 6.5	Valuing ‘Every Drop’	92
Box 6.6	‘Supply chain’ versus ‘value chain’	93
Box 7.1	The legacy of colonial value systems on water resources law in Africa	99
Box 7.2	Trying to understand cultural values through investigating mass fish kills in the Menindee region, Australia.....	101
Box 7.3	Place-based value systems, stewardship and legal personhood of the Whanganui River, New Zealand	102
Box 7.4	Value aspects of customary water law: Views from Africa.....	103
Box 8.1	Agadir Desalination Plant, Morocco.....	120
Box 9.1	The National Water Initiative in Australia.....	127
Box 9.2	Benefit-sharing and cost allocation in the Senegal River basin	129
Box 9.3	Nexus approaches.....	130
Box 10.1	Tools for monetizing non-monetary costs and benefits of water projects	136
Box 10.2	Using the replacement cost method to address falling groundwater tables in Dhaka, Bangladesh.....	138
Box 10.3	Innovative mechanisms to ensure affordability of water tariffs in France	139
Box 10.4	Day Zero events and scarcity signalling in South Africa.....	142
Box 11.1	Use and value of hydrological data	145
Box 11.2	The Great Canoe Journey.....	148
Box 11.3	Local and Indigenous Knowledge (LIK) in managing water scarcity with value generation	149
Box 11.4	Citizen science helps fill hydrological data and information gaps in Zambia.....	151
Box 11.5	Ten principles for citizen science	152
