

CLIMATE PROFILE

*Climate Variabilities, Extremes and Trends in
Central Dry, Coastal and Hilly Zones*

MYANMAR

This has been prepared by the Regional Integrated Multi-Hazard Early Warning System (RIMES), as a technical partner to United Nations Human Settlements Programme (UN-Habitat), as part of the Building Resilience and Adaptation to Climate Extremes and Disasters (BRACED) Programme, in Myanmar.

The completion of this Climate Profile has been possible through RIMES' collaboration with Myanmar's Department of Meteorology and Hydrology (DMH) and support from United Kingdom's Department for International Development (DFID), through the BRACED Consortium.

Definition of Key Terminologies

Terminology	Definition
Average	Average in rainfall, temperature and wet days values in 30 years (1981-2010)
Dry season	The period of minimal rainfall, from November to April
Maximum temperature	Daytime temperature, usually measured from 12:00-14:00, for identifying the hottest temperature in a day
Minimum temperature	Nighttime temperature, usually measured from 18:30 – 6:30, for determining the coolest temperature in a day
Normal	Averages in rainfall and temperature values, utilizing data from 1981-2010 baseline period
Wet season	Also referred to as the Southwest Monsoon Season, in Myanmar, where copious rainfall is usually observed in the country, from May to October
