FOREWORD

The Human Settlements Global Dialogue Series provides a forum for publishing cutting-edge policy oriented research in human settlements. The Series is managed by the Policy Analysis Branch of UN-HABITAT, which also serves as the Secretariat for the Global Research Network on Human Settlements (HS-Net). The purpose of the series is to encourage dialogue and exchange of ideas in the human settlements field. It keeps readers informed and up to date with trends and conditions in human settlements, but also contributes to the building of research capacity in developing countries. The target audience of the series includes researchers, academic institutions, public policy makers and non-governmental organizations.

The subject of the series is confined to the human settlements field, both urban and rural. Authors are encouraged to submit papers on topics within the thematic focus areas of the Habitat Agenda, i.e.: urban planning, development and management; land and housing; urban environment; water, sanitation, transport and other types of infrastructure; urban economic development; housing and municipal finance; risk and disaster management; social inclusion; as well as global monitoring of human settlements conditions and knowledge management.

All papers submitted for publication are reviewed by human settlements experts selected from within and outside HS-Net's Advisory Board.

It is my hope that researchers, policymakers and practitioners will find the research papers in this series informative and useful.
