ETHIOPIA: DIRE DAWA URBAN PROFILE

Participatory Slum Upgrading Programme in the African, Caribbean and Pacific Countries

Project designed and implemented by UN-HABITAT

and financed by European Union, Government of Italy, Government of Belgium and Government of the Netherlands

This report was prepared by Ethiopia UN-Habitat Programme Manager Tewodros Tigabu and Consultant Girma Semu elaborating on information collected through interviews with key urban actors in Ethiopia.

This project and report were managed by Mohamed El Sioufi, Alain Grimard and Kerstin Sommer. Important inputs were provided by Alioune Badiane, Antonio Yachan, Farrouk Tebbal, Clarissa Augustinus, Mohamed Halfani, Lucia Kiwala, Eduardo Moreno, Raf Tuts, Gulelat Gebede and Gora Mboup.

Review, editing and graphic design: Ib Knutsen.

Photographs by Girma Semu.

FOREWORD

The annual urban growth rate in Sub-Saharan Africa is almost 5 percent twice as high as in Latin America and Asia. It also has the world's largest proportion of urban residents living in slums, which today are home to 72 percent of urban Africa's citizens representing a total of some 187 million people. As more and more people seek a better life in towns and cities, the urban slum population in Africa is projected to double every 15 years in a process known as the urbanisation of poverty. African cities are thus confronted in the new Millennium with the problem of accommodating the rapidly growing urban populations in inclusive cities, providing them with adequate shelter and basic urban services, while ensuring environmental sustainability, as well as enhancing economic growth and development.

UN-HABITAT is the lead agency for implementation of Millennium Development Goal (MDG) 7, Target 10 (reducing by half the number of people without sustainable access to safe drinking water), and Target 11 (achieving significant improvement in the lives of at least 100 million slum dwellers by 2020).

As part of our drive to address this crisis, UN-HABITAT is working with the European Commission (EC) to support sustainable urban development in African, Caribbean and Pacific (ACP) countries. Given the urgent and diverse needs, the agency found it necessary to develop a tool for rapid assessment to guide immediate, mid- and long-term interventions.

In 2004, UN-HABITAT's Regional Office for Africa and the Arab States took the initiative to develop the approach for application in over 20 countries. This was achieved in collaboration with other departments within the agency – the Urban Development Branch with the Urban Environment Section, the Global Urban Observatory, the Shelter Branch, the Urban Governance Unit, the Gender Policy Unit, the Environment Unit and the Training and Capacity Building Branch. This new corporate approach is known as **Rapid Urban Sector Profiling for Sustainability**. The implementation of the Urban Profiling was launched thanks to contributions from the Governments of Italy, Belgium and the Netherlands. Today, UN-HABITAT is conducting city profiles in 18 new countries as part of the Participatory Slum Upgrading Programme financed by EuropeAid and its Intra-ACP fund. Also, Ethiopia, as well as 12 other African countries, are going to develop action plans for selected priority proposals presented in this document, the second phase of the new programme. The idea behind the urban profiling is to help formulate urban poverty reduction policies at the local, national and regional levels through a rapid, participatory, crosscutting, holistic and action-orientated assessment of needs. It is also aimed

at enhancing dialogue, awareness of opportunities and challenges aiming at identifying response mechanisms as a contribution to the implementation of the MDGs.

The approach addresses four main themes: governance, slums, gender and HIV/AIDS and environment. It seeks to build a national profile, and three settlements representing the capital or a large city, a medium-sized city, and a small town. The profiles offer an overview of the urban situation in each participating city through a series of interviews with key urban actors. This is followed by a city consultation where priorities are agreed. City-level findings provide input for the national profiling that is combined with a national assessment of institutional, legislative, financial and overall enabling frameworks and response mechanisms. The profiles at all levels result in supporting the formation of city and national strategies and policy development. Additionally, the profiling facilitates sub-regional analyses, strategies and common policies through identification of common needs and priorities at the sub-regional level. This provides guidance to international external support agencies in the development of their responses in the form of capacity building tools.

In Ethiopia, the profiling was undertaken under the leadership of national and local authorities. This initiative has been carried out locally in Addis Ababa, Dire Dawa and Ambo, as well as nationally. The Ethiopia National Profile focuses on the findings of a desk-study, interviews with key actors, and country-wide consultations with key urban actors and institutions. Consultation participants agreed to address the salient urban issues including poverty, insecurity, corruption, pollution and crime – all problems that negatively affect investments and economic development. A consensus was reached on priority interventions in the form of programme and project proposals to be implemented.

I wish to acknowledge the contributions of Mr. Mohamed El Sioufi, who initiated the urban profiling concept, the Programme Manager Alain Grimard and Kerstin Sommer who coordinates the programme. I also wish to cite those members of staff for their role in helping produce this report. They include Alioune Badiane, Kerstin Sommer, Clarissa Augustinus, Mohamed Halfani, Lucia Kiwala, Eduardo Moreno, Raf Tuts, Gulelat Kebede, Gora Mboup and Tewodros Tigabu.

I would like to wish all those who have participated in and supported this initiative every success in its implementation. I also look forward to supporting further their efforts in the development of Ethiopia.

Anna Kajumulo Tibaijuka
Under-Secretary-General of the United Nations,
and Executive Director,
UN-HABITAT

Ethiopia is one of the least urbanized countries in Africa, with some of the largest number of people living in cities. This apparent contradiction is owed to our agricultural heritage, where the majority has been working the land. Rapid population growth has since been countering this, ensuring that, of 77 million people, over 12 million are now living in cities.

The growth of Ethiopian cities presents enormous challenges to the nation. Not only are the markets in cities essential for the prosperity of rural areas, but they can also provide additional economic growth, opportunities, and improved access to education and health.

The Ethiopian government has therefore partnered with UN-HABITAT to fully review the status of the cities, and see how Ethiopia best can facilitate for vulnerable groups, improve urban services, and support future growth. This publication is the first step of this process, serving as both a base-line, and as an illuminator to what our areas of focus should be. The second phase will build upon these insights, and identify tangible projects and processes that municipal authorities, regional- and central government together with international partners can implement to improve the situation for Ethiopians in general, and reducing urban poverty in particular.

Ethiopia is in a favorable position to address these issues, due to a number of factors. It has taken steps to reform the administrative structure, by decentralizing government authority to regional and district level, simplifying the legal code and promoting small-scale enterprises. Ethiopia has also increased school enrolment and access to health care, stabilised HIV/AIDS infection rates, improved access to clean water, and strengthened the rights of women. As a result, the economy has grown by an annual 9 percent the last five years.

Much remains to be done, however. The population size is only second to Nigeria in Sub-Saharan Africa, and it is growing by 2.9 percent per year. Many of these children will be born into poverty. Innocent as they are, they will increase the strain on our already stretched public facilities. The economy will eventually need to grow even faster, just to keep up. Given the huge challenges facing the nation, it may not be surprising that poverty eradication is Ethiopia's main development goal.

At the same time, the country's agriculture is still not self-sufficient, and is threatened at regular intervals by droughts and floods. The private sector, while encouraged and growing, is not expanding rapidly enough to absorb the increasing urban migration. Ethiopian cities are the fastest growing administrative units in the country, adding 4.2 percent per year. Creating enough jobs, shelters, schools and health facilities for the urban population is a task the government is already working hard at addressing.

Careful planning, transparent governance and effective implementation are essential tools for us to build on our progress, learn from the past, and work hard for the benefit of our country and our peoples.

The main policy tool of the government is the Plan for Accelerated and Sustained Development to End Poverty (PASDEP). It follows up lessons learned from the first comprehensive poverty-reduction policy in 2002, the Sustainable Development and Poverty Reduction Programme (SDPRP). It has been developed in a participatory manner with national and international stakeholders under the auspices of the Ministry of Finance and Economic Development (MoFED). The final draft was shared again with line ministries and regional authorities, before being adopted by the Ethiopian parliament as a legal document guiding national development policy until 2010.

The Urban Profiling was handy to analyse policy thinking, focusing on urban sustainability through governance, institutions and services. The participatory approach adopted in the process is also important to highlight issues that may otherwise not come to be identified. The continued support from the Governments of Italy, Netherlands, Belgium, and the European Commission is welcomed as developing sustainable cities is one of the world's greatest challenges.

EXECUTIVE SUMMARY

Introduction

The Urban Profiling is a systematic and structured approach to the assessment of urban needs and response mechanisms at city and national levels in Africa and the Arab States.

The overriding aim of the study is to contribute to the ongoing efforts of countries in the region in poverty reduction at all levels - city, country and region.

In doing so it is hoped that the assessment would provide an opportunity to gauge the gaps in implementing the United Nations Millennium Development Goals (*MDGs*) of countries in the region.

The Urban Profiling, initially implemented in over twenty countries, is now a global programme. It is expected to provide critical inputs and benefits to the implementing partners, enabling the management of sustainable cities, with adequate shelter, health and basic services.

The Urban Profiling in Ethiopia includes the profile of Addis Ababa, the capital, Dire Dawa, the second largest city, and Ambo, a third level town each published as a separate report.

The themes included in the study are slum and housing condition, gender, urban environment and urban governance. This report comprises of a background, and analysis of the four themes of Dire Dawa City.

Background

The Dire Dawa Administration area covers nearly 130,000 hectares, of which only 2 percent constitute built-up urban areas. The remaining 98 percent is considered rural Dire Dawa.

In terms of population Dire Dawa has a total population size of 384,000 of which 74% (284,160) live in urban Dire Dawa while the remaining 26% live in rural Dire Dawa. The majority of the Dire Dawa population derive their livelihood from trade activities.

Governance

Dire Dawa city is organized under the federal democratic republic of Ethiopia "*Dire Dawa administration charter proclamation No. 416/2004*".

The city has two tiers of administration - the Municipality, which is responsible for efficient and effective service delivery and administration of the city.

The other tier of administration are the kebeles. Kebeles are responsible for administering local issues, including organising and mobilising the community in development activities, social and security issues.

Slum and Housing

The government of Ethiopia recognises the right of citizens to decent housing and commits itself to implement international conventions and agreements, such as MDGs and the Habitat Agenda.

This has not had an immediate effect in Dire Dawa. There is a backlog of 24,000 houses, and it is expected to grow annually by 2 900 houses. The huge gap between demand and supply increases informal settlements, and more than 200 000 people are living in slums or sub-standard housing.

The city administration is working to officiate these settlements and provide title deeds to the occupants. The number of people living in precarious sites such as mountains and stream sides are another manifestation of the housing problem.

Cognizant of this critical problem the federal government of Ethiopia and the Dire Dawa administration have put housing development and provision on top of the list of priorities.

Gender

Gender inequality has a long and deep rooted history in Ethiopia. Dire Dawa is no exception, but has increased its focus in the last decade. However, in spite the constitutional rights of women and some encouraging achievements, women are still deprived of their basic rights.

Thus the Dire Administration has been working towards narrowing the gap. Two of the eleven cabinet members are women, which, at 18 percent, is better than Addis Ababa. At the kebele level, 18 out of 54 posts are held by women, which is more than 33 percent.

Environment

All citizens have the right to a clean and healthy environment, according to Art. 44, No. 4, of the constitution. In practice, however, the environmental situation in all cities of Ethiopia, including Dire Dawa, is critical.

Only 48 percent of the solid waste is being collected, and the waste collected is simply dumped outside the city. 22 percent of houses have no toilet facility whatsoever, and poor sanitation is evident from the mass of informal dumping sites. Water supply coverage is only 56 percent.

These problems coupled with the lack of sufficient flood drainage system are posing a health and sanitation threat to the city.

The city government is planning to address some of these issues, through five environment related projects, at a total cost of USD \$ 4.5 million.

INTRODUCTION

The Urban Profiling

The Urban Profiling consists of an accelerated, action-oriented assessment of urban conditions, focusing on priority needs, capacity gaps and existing institutional responses at local and national levels.

The purpose of the study is to develop urban poverty reduction policies at local, national and regional levels, through an assessment of needs and response mechanisms, and as a contribution to wider-ranging implementation of the Millennium Development Goals.

The study is based on analysis of existing data and a series of interviews with all relevant urban stakeholders, including local communities and institutions, civil society, the private sector, development partners, academics and others.

This consultation typically results in a collective agreement on priorities and their development into proposed capacity-building, and other projects, that are all aimed at urban poverty reduction.

The Urban Profiling is now being expanded from its initial 20 African and Arab countries, offering an opportunity for comparative regional analysis, at present, between 38 countries. Once completed, this series of studies will provide a framework for central and local authorities and urban actors, as well as donors and external support agencies.

Methodology

The Urban Profiling consists of three phases:

Phase one is a rapid urban profiling at national and local levels. The capital city, medium size city and small town are selected and studied to provide representative samples of the urban sector in each country.

The analysis focuses on four themes: Governance, Slums, gender and Environment. Information is collected through interviews and discussions with institutions and key informants to assess strengths, weaknesses, opportunities, threats and priorities (*SWOT*) of the national and local urban contexts.

The findings are presented and refined during city and national consultation workshops and consensus is reached for priority interventions.

National and town reports synthesize the information collected and outline ways forward to reduce urban poverty through holistic approaches.

Phase two builds on the priorities identified through pre-feasibility studies and develops detailed capacity building and capital investment project proposals.

Phase three implements the projects developed during the earlier phases, with an emphasis on skills development, institutional strengthening and replication. This report presents the outcomes of RUSPS phase one of Dire Dawa city.

Urban Profiling in Dire Dawa

Urban Profiling in Dire Dawa has been developed in consultation with the lead ministry - Ministry of Works and Urban Development, thus a consultation forum involving the key sections including gender, land and housing, policy planning road fund and federal urban planning institute have been organized to seek feedback.

At the city level, the relevant city administration organs such as the City Manager's Office, Dire Dawa Environment Protection Authority, the Education, Health, Housing, and Capacity building bureaus.

Information have been collected from both primary and secondary sources, including local publications and unpublished studies. Moreover primary sources such as interviews, consultations and discussions with relevant officials and professionals were employed.

Feedbacks have also been sought from both the city level and national consultations, in order to accommodate priorities and concerns of the city administration and other stakeholders.

Report structure

This report consists of:

- 1 A **general background** of the urban sector in Dire Dawa, based on a desk study, interviews, focus group consultations with key stakeholders. (*See back cover for a list of participants in the city consultations and bibliography*).

The background includes data on administration, urban planning, the economy, the informal and formal private sector, urban poverty, infrastructure, water, sanitation, public transport, street lighting, energy, health and education;

- 2 A synthetic **assessment** of four main areas – governance, slums, gender and HIV/AIDS and environment – in terms of the institutional set-up, regulatory frameworks, resource mobilisation and performance. This second section also highlights agreed priorities and includes a list of identified projects;
- 3 The third and last section includes a Strengths, Weaknesses, Opportunities and Threats (*SWOT*) analysis and an outline of priority project proposals for each theme. The proposals include beneficiaries, partners, estimated costs, objectives, activities and outputs.
