Design and layout by Big Mouth Gets.

The definitive version of the road map can be found in the official records of the Seventy-third World Health Assembly (document WHA73/2020/REC/1, Annex 8).

Neglected tropical diseases (NTDs) are ancient diseases of poverty that impose a devastating human, social and economic burden on more than 1 billion people worldwide, predominantly in tropical and subtropical areas among the most vulnerable, marginalized populations.

Conclusions

Nine years have elapsed since the World Health Organization (WHO) published its first road map for neglected tropical diseases, which set targets for 2020. With exemplary country leadership and the continued support of industry and partners, we have been able to push back many of these diseases, bringing some close to elimination and eradication.

However, despite substantial progress in reducing the overall burden, many of the targets set for 2020 were not achieved.

This road map builds on past lessons and experiences so we can better understand emerging challenges. Over the next decade, we will move from a disease-specific to an integrated approach that cuts across all 20 diseases and disease groups, to ensure country ownership and leadership, to work even more closely with countries and partners, and to promote the development of new tools for prevention, diagnosis and treatment.

We will also work with other programmes and sectors to optimize our strategy to achieve the targets: by 2030, we aim to free more than 1 billion people who currently require interventions against neglected tropical diseases, and save millions more from catastrophic out-of-pocket expenditure.

In the same spirit, the road map highlights the need for innovative approaches to achieve maximum efficiency and scalability through enhanced capacity, increased country commitment including domestic funding, and external resource mobilization. In short, this road map places people and communities at the centre of efforts to improve their health and welfare.

This new road map is our collective vision and was developed over the past two years through extensive consultations. WHO is committed to working with every country and partner to better deliver interventions in a coordinated manner and improve the cost-effectiveness and coverage of programmes that will guarantee that the poorest have enhanced access to quality-assured, effective and safe medicines and diagnostics.

As we demonstrated during the COVID-19 pandemic, working across sectors in unity and solidarity is not just a concept but a powerful force. This road map unites us all to work together to free those afflicted by neglected tropical diseases from unnecessary suffering, stigmatization and neglect.

The countdown to 2030 has begun: we know the destination, and we have a new road map. Now it's time to move.

Dr Tedros Adhanom Ghebreyesus
Director-General
World Health Organization

*The 2030 road map
outlines disease-
specific and cross-
cutting targets
and strategies and
represents the voices
of the entire NTD
community.*
