EBOLA VIRUS DISEASE

Democratic Republic of the Congo

External Situation Report 97

Date of issue: 16 June 2020

Data as reported by: 14 June 2020

1. Situation update

Cases

 3463

Deaths

 2280

In Ituri, North Kivu and South Kivu provinces of the Democratic Republic of the Congo, no new confirmed cases of EVD have been reported since 27 April 2020.

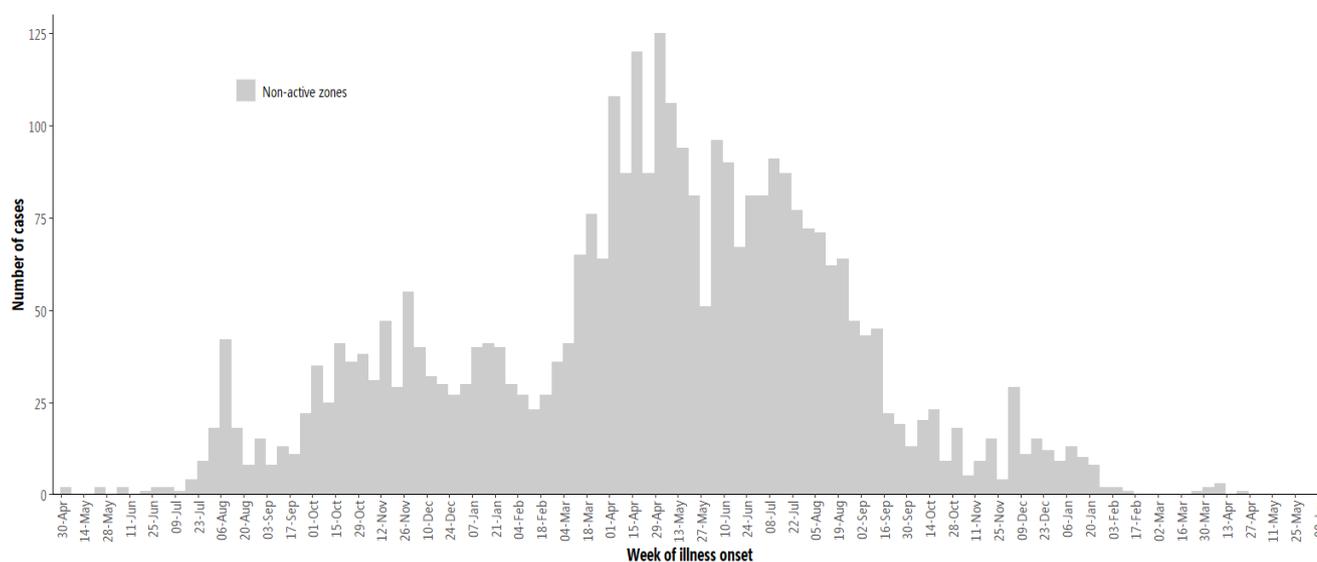

From 8 to 14 June 2020, an average of 2975 alerts were reported and investigated each day. Of these, an average of 274 alerts were validated as suspected cases each day, requiring specialized care and laboratory testing to rule out EVD. In the past week, there have been a stable number of daily alerts reported throughout active sub-coordinations. Timely testing of suspected cases continues to be provided from eight laboratories. From 8 to 14 June 2020, 3219 samples were tested, including 2513 blood samples from alive, suspected cases; 324 swabs from community deaths; and 382 from re-tested patients. None of them tested positive. The number of samples tested by the laboratories increased by 3% compared to the previous week.

As of 14 June 2020, a total of 3463 EVD cases, including 3317 confirmed and 146 probable cases have been reported, of which 2280 cases died (overall case fatality ratio 66%), and 1171 have recovered. Of the total confirmed and probable cases, 57% ($n=1970$) were female, 29% ($n=1002$) were children aged less than 18 years, and 5% ($n=171$) were health care workers.

Handover of the coordination of the response activities to the Provincial Health Division of North Kivu Province, which started on 1 June 2020, is ongoing.

For information about the EVD outbreak in Équateur Province see the [WHO Regional Office for Africa Weekly Bulletins on Outbreaks and Other Emergencies](#).

Figure 1: Health zone of reported Ebola virus disease cases by week of illness onset, as of 14 June 2020

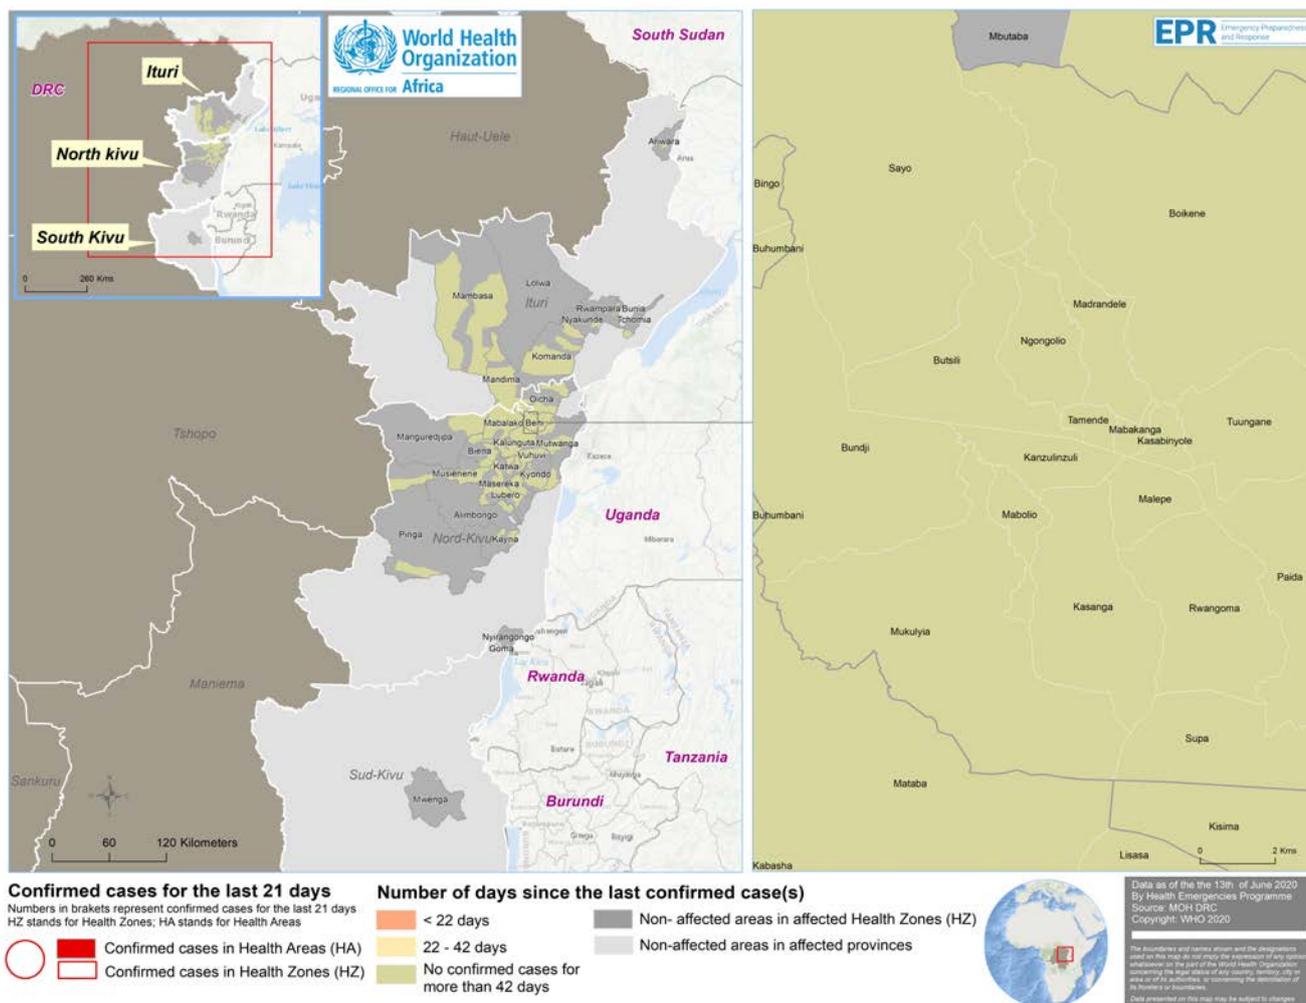

**Excludes n=68/3463 cases for whom onset dates not reported. Data in recent weeks are subject to delays in case confirmation and reporting, as well as ongoing data cleaning.*

Table 1: Ebola virus disease cases by classification and health zones in North Kivu, South Kivu, and Ituri provinces, Democratic Republic of the Congo, as of 14 June 2020

Province	Health Zone	Health areas reporting at least one case in previous 21 days / total number of health areas	Confirmed cases in the last 21 days	Cumulative cases by classification			Cumulative deaths	
				Confirmed cases	Probable cases	Total cases	Deaths among confirmed cases	Total deaths
South Kivu	Mwenga	0/18	0	6	0	6	3	3
North Kivu	Alimbongo	0/20	0	5	1	6	2	3

Note: Attributions of cases notified in recent days to a health zone are subject to changes upon in-depth investigations

Figure 2: Geographical distribution of confirmed and probable Ebola virus disease cases by health area, North Kivu and Ituri provinces, Democratic Republic of the Congo, 14 June 2020

2. Actions to date

The Government and the Ministry of Health (MoH) and other national authorities in the Democratic Republic of the Congo, WHO, and partners are implementing outbreak control interventions together with teams in the surrounding provinces, who are taking measures to ensure that they are response-ready.

An overview of key activities is summarized below:

Surveillance and Laboratory

- From 8 to 14 June 2020, 3219 samples were tested, including 2513 blood samples from alive, suspected cases; 324 swabs from community deaths; and 382 samples from re-tested patients. The number of samples tested by the laboratories increased by 3% compared to the previous week.
- Over 250 000 contacts of cases reported in Ituri, North Kivu and South Kivu provinces were registered during this outbreak.

Vaccines

- The summary of rVSV-ZEBOV-GP vaccination data shows that between 8 August 2018 and 20 May 2020, 305 841 people were identified as eligible for vaccination; 99.4% ($n=303\ 905$) of them were vaccinated.
- In addition, vaccination activities using Ad26-ZEBOV/MVA-BN-FILO were carried out in the health areas of Majengo and Kahembe, Karisimbi Health Zone in North Kivu Province. Between 14 October 2019 and 10 April 2020, 20 339 people received the first dose of this vaccine, and 9 560 of them received the second.
- WHO anticipates potential longer-term challenges with the vaccine pipeline due to limited flight ability as a result of the COVID-19 pandemic.

Case management

- Ebola treatment centres (ETCs), transit centres (TCs) and decentralized transit centres
