<b>Executive summary</b>	<b>Vii</b>
<b>Monitoring financial protection</b>	
Measures of financial protection	1
Data sources	4
Global and regional estimation methods	4
<b>Global and regional progress on catastrophic health spending (SDG 3.8.2 indicators) and impoverishment due to out-of-pocket health spending</b>	
Levels and trends in catastrophic health spending: the SDG 3.8.2 indicators	9
Levels and trends in impoverishment due to out-of-pocket health spending (SDG-related indicators)	12
<b>A deeper look</b>	
Rural–urban inequalities in catastrophic and impoverishing health spending	19
Gender inequalities in catastrophic health spending: case study from the WHO region of the Americas	21
Drivers of financial hardship in the WHO European Region and South-East Asia Region and selected countries mostly in Africa	22
<b>Limitations of the present report</b>	<b>25</b>
<b>Notes</b>	<b>47</b>
<b>References</b>	<b>49</b>
<b>Annexes</b>	
1 Sustainable Development Goal universal health care indicator 3.8.2: catastrophic health spending by country, most recent year available	29
2 Sustainable Development Goal–related indicators of impoverishment due to out-of-pocket health spending by country, most recent year available	34
3 World Health Organization European Region indicators of catastrophic and impoverishing health spending	38
4 Sensitivity of 2015 estimates to recency of the Indian and Chinese data and econometric modelling	39
5 List of countries by United Nations regions	41
6 Incidence of catastrophic health spending as tracked by SDG indicator 3.8.2, 10% of household spending threshold, by World Health Organization region, World Bank region and World Bank income group	42
7 Incidence of catastrophic health spending as tracked by SDG indicator 3.8.2, 25% of household spending threshold, by World Health Organization region, World Bank region and World Bank income group	43
8 Incidence of impoverishment due to out-of-pocket health spending at the \$1.90 per person per day poverty line (in 2011 PPP) by World Health Organization region, World Bank region and World Bank income group	44
9 Incidence of impoverishment due to out-of-pocket health spending at the \$3.20 per person per day poverty line (in 2011 PPP) by World Health Organization region, World Bank region and World Bank income group	45
10 Incidence of impoverishment due to out-of-pocket health spending at the relative poverty line of 60% of median daily per capita consumption by World Health Organization region, World Bank region and World Bank income group	46

## Boxes

1	Out-of-pocket health spending can be directly or indirectly related to using services, but the focus is on direct relationships when monitoring a health system's performance in providing financial protection	2
2	Ways to measure catastrophic health spending	3
3	Financial protection monitoring for 2019: what has changed since 2017?	5
4	Global and regional estimates of financial protection indicators combine survey-based estimates at the country level, with and without econometric modelling, and imputation of missing values	6
5	Breakdown of households with catastrophic health spending by risk of impoverishment in the WHO European Region	16
6	The incidence of catastrophic health spending as tracked by Sustainable Development Goal indicator 3.8.2 will continue to increase at the current pace of growth in out-of-pocket health spending as a share of household final consumption.	18
7	Acting on the evidence: better copayment policy is key in the World Health Organization European Region	26
8	Unmet needs are part of financial protection analysis in the World Health Organization European Region	27

## Figures

1	Globally, financial protection against out-of-pocket health spending decreased continuously between 2000 and 2015, as tracked by Sustainable Development Goal indicator 3.8.2 on catastrophic health spending	viii
2	Globally, the population impoverished by out-of-pocket health spending is increasing at the relative poverty line of 60% of median daily per capita consumption or income although decreasing at the \$1.90 and \$3.20 a day absolute poverty lines	viii
3	Availability of Sustainable Development Goal and SDG-related estimates of financial protection in the global database assembled for this report varies by country, but a majority of countries have estimates for both 2000–2009 and 2010–2018	6
4	There are large variations within regions in the percentage of people with catastrophic health spending, as tracked by Sustainable Development Goal indicator 3.8.2	10
5	Progress on financial protection, as tracked by Sustainable Development Goal indicator 3.8.2, varies across country income groups, steadily declining only in low-income countries since 2005	11
6	Across countries, there are large variations in the percentage of the population impoverished by out-of-pocket health spending at all poverty lines	12
7	Across countries, there are also marked variations in the poverty gap increase attributable to out-of-pocket health spending at all poverty lines	13
8	The number and percentage of people impoverished by out-of-pocket health spending decreased sharply only in low-income countries since 2005	16
9	Rural–urban inequalities in the percentage of the population with catastrophic and impoverishing health spending, as tracked by Sustainable Development Goal and Sustainable Development Goal-related indicators, by country income group	20
10	In selected countries in the WHO Region of the Americas, female-headed households are not necessarily more likely than male-headed households to incur catastrophic health spending as tracked by Sustainable Development Goal indicator 3.8.2, when other characteristics were not controlled for	21
11	In six of eight countries in the World Health Organization South-East Asia Region, spending on medicines accounted for more than 75% of total out-of-pocket health spending among households incurring any out-of-pocket health spending	22
12	Poorer households in the WHO South-East Asia region usually spent disproportionately more on medicines than richer households	22
13	In the World Health Organization European Region, households with catastrophic health spending are spending mostly on outpatient medicines	24
14	Medicines and outpatient care are the main drivers of out-of-pocket expenditures in selected countries, mostly in Africa	24

**Tables**

1	Global and regional trends in catastrophic health spending, as tracked by Sustainable Development Goal indicator 3.8.2	10
2	Global and regional trends in impoverishment due to out-of-pocket health spending at the \$1.90 a day and \$3.20 a day absolute poverty lines and at the relative poverty line of 60% of median per capita daily consumption	14
3	People in rural areas do not necessarily experience a higher incidence of catastrophic health spending, but they tend to experience a higher incidence of impoverishing health spending	19

## Contributors

**The principal contributors to this report were:**

World Health Organization (WHO): Gabriela Flores, Tessa Tan-Torres Edejer, Sarah Thomson, Tamás Evetovits, Jonathan Cylus, Camilo Cid, Juan Pablo Pagano, Lorena Prieto, Hernan Roman, Hui Wang, Lluís Vinals Torres, Justine Hsu

World Bank: Patrick Hoang-Vu Eozenou, Adam Wagstaff, Marc Smitz

**Data preparation, support to conduct the country consultation and other inputs to produce the report were provided by the following WHO consultants:**

Ana Mendez Lopez, Kateryna Chepynoga, Leander Buisman

World Bank: Muhammad Ali Pate, Toomas Palu, Ellen van de Poel, Margarida Soares Rodrigues, Owen K. Smith

**Writing and editing assistance as well as design by** a team at Communications Development Incorporated led by Bruce Ross-Larson and including Joe Brinley, Joe Caponio, Mike Crumplar, Meta de Coquereau, Debra Naylor (Naylor Design), Peter Redvers-Lee, Christopher Trott and Elaine Wilson.

Maps were produced by Florence Rusciano (WHO)

**Overall project management was done by** Gaël Kernén (WHO) and overall scientific project management was done by Gabriela
