FOREWORD

In September 2019 the Seventy-Second Session of the Regional Committee for WHO South-East Asia Region committed to eliminate measles and rubella by 2023, replacing the earlier target of eliminating measles and controlling rubella and congenital rubella syndrome. The new target is one of the Region's eight Flagship Priorities and reflects the Region's ongoing progress against vaccine-preventable diseases generally and measles and rubella specifically. Achieving the revised target will hasten progress towards WHO's global 'triple billion' targets and the 2030 Agenda for Sustainable Development.

The following Strategic Plan, which the Regional Committee endorsed, will provide strategic direction to all Member States to eliminate measles and rubella by 2023. It was developed in consultation with Member States, experts, professional bodies and academia and is based on years of experience in vaccine-preventable disease eradication, elimination and control activities in the Region. The Plan incorporates the lessons learnt from the implementation of the previous strategic plan and stresses the importance of strengthening routine immunization systems, laboratory-supported case-based surveillance, outbreak preparedness and timely response. To sustain and accelerate progress, the Plan also highlights several evidence-based and innovative enablers that should be leveraged as and where needed.

The strategies outlined in this Plan should be implemented optimally and on time to achieve the elimination targets. To help do that, all 11 of the Region's Member States, with the support of partners, must increase the visibility of measles and rubella elimination activities and make the investments needed to strengthen health systems and achieve equitable access to immunization services. WHO is committed to supporting and monitoring each Member State's progress.

With strong partnerships, resources and political will, together we can eliminate measles and rubella in the South-East Asia Region by 2023. Let us use this Strategic Plan to expand equitable access to measles and rubella vaccines, to reach the unreached and underserved, and to save many more lives as we advance towards the Region's Flagship Priorities, WHO's triple billion targets and Sustainable Development Goal 3: ensuring healthy lives and promoting health and well-being for all at all ages.
