

PROGRESSING PRIMARY HEALTH CARE:  
**A SERIES OF COUNTRY  
CASE STUDIES**

## Acknowledgements

This document was produced as part of the Technical series on primary health care on the occasion of the Global Conference on Primary Health Care, under overall direction of the Global Conference Coordination Team, led by Ed Kelley (WHO headquarters), Hans Kluge (WHO Regional Office for Europe) and Vidhya Ganesh (UNICEF). Overall technical management for the series was provided by Shannon Barkley (Department of Service Delivery and Safety, WHO headquarters) in collaboration with Pavlos Theodorakis (Department of Health Systems and Public Health, WHO Regional Office for Europe).

This country case series was produced in collaboration with Ariadne Labs and Luke Allen (Consultant, WHO).

The principal authors of this document were Ami Karlage and Asaf Bitton (Ariadne Labs, Boston, USA) and Luke Allen (Consultant, WHO, Geneva).

Contributions to each case study were made by WHO collaborating partners and regional and country office staff, and are included in the acknowledgements for each case study.

In addition, the series includes five cases that are extracted from the publication “Progressing the Sustainable Development Goals through Health in All Policies: case studies from around the world” ([http://www.who.int/social\\_determinants/publications/progressing-sdg-case-studies-2017.pdf?ua=1](http://www.who.int/social_determinants/publications/progressing-sdg-case-studies-2017.pdf?ua=1)) published by the Government of South Australia and WHO. The views expressed in this document do not necessarily represent the opinions of the individuals mentioned or their affiliated institutions.

# Introduction

The 1978 Declaration of Alma-Ata (1) was revolutionary. Many countries, the World Health Organization (WHO), the United Nations Children's Fund (UNICEF) and other organizations had been pursuing strategies to provide primary health care (PHC) for years (2). However, Alma-Ata made PHC central to health care policy and practice. In a world in which resources had long been focused on "vertical" health programmes, expanding the focus of health care was a novel approach for the global health community. Since this declaration, efforts to improve health have increasingly been framed in terms of building, strengthening or realigning the systems that contribute to a more expansive notion of health for the entire population.

In 2018, in support of the Global Conference on Primary Health Care and the Declaration of Astana, WHO commissioned a series of case studies on various countries that have delivered PHC reforms over the past four decades. These case studies illustrate different aspects of PHC reform, focusing on successful interventions but also highlighting ongoing challenges. They were chosen to represent the experience of a diverse range of countries, each with different population health needs, health system development, and levels of resources.

The aim of the series is to demonstrate how commitment to PHC can be translated into action, highlight common challenges, showcase what has worked well, and provide examples for policymakers and other stakeholders who are committed to transformation in support of PHC. The cases include those that focus on health sector reform, and those using the “health in all policies” (HiAP) approach. The cases can be summarized as follows:

- Australia – Lessons from 10 years of HiAP in South Australia;
- Brazil – the Mais Medicos Programme;
- Canada – Quebec’s policy of prevention in health, a HiAP approach;
- China – Multidisciplinary teams and integrated service delivery across levels of care;
- Egypt – Health sector reform;
- El Salvador – Territorial community teams;
- Estonia – The development of family practice to support universal health coverage;
- Finland – How to take into account health, well-being and equity in all sectors;
- Ghana – Community engagement, financial protection and expanding rural access;
- Iran – Health sector reforms;
- Jamaica – Development of workforce for first level of care;
- Kazakhstan – Technology to support disease management in primary care;
- Samoa – Engaging people for health promotion;
- Sri Lanka – Community-based workforce development for maternal and child health;
- Suriname – Reducing the burden of disease and health inequity through HiAP;
- Thailand – Development of primary care;
- Turkey – Family practice for quality in universal health coverage; and
- Viet Nam – Improving equity in access to primary care.

## Context

The world is facing profound social, ecological, political, epidemiological and demographic transitions. PHC provides a society-wide approach to respond to these challenges; hence, world leaders are coming together to renew their commitment to PHC. As the cases highlighted here demonstrate, PHC advances UHC, and contributes to the attainment of health-related targets of the Sustainable Development Goals (SDGs), including those on poverty, hunger, education, gender equality, clean water and sanitation, work and economic growth, reducing inequality, health and climate action.
