# Acknowledgements

Work on this document was initiated within the WHO Department of Reproductive Health and Research (RHR) on Strengthening Family Planning and Contraceptive Services within the Bill and Melinda Gates Umbrella project by Asa Cuzin-Kihl (Department of Reproductive Health and Research, WHO), Mario Festin (Department of Reproductive Health and Research, WHO), Leopold Ouedraogo (WHO Regional Office for Africa Family and Reproductive Health and Reproductive and Women's Health [FRH/RWH]), and Suzanne Reier (Department of Reproductive Health and Research, WHO). Asa Cuzin-Kihl coordinated the project and Mario Festin developed the concept and background information for this guide, which is based mainly on the Documentation Guide developed by WHO RHR, Implementing Best Practices Initiative (IBP) and West African Health Organization (WAHO) in 2015 and the *Guide for documenting and sharing best practices in health programmes* developed by WHO Regional Office for Africa in 2008. Peter Nsubuga (Medical Epidemiologist, Global Public Health Solutions) developed the first draft of the harmonized and hands-on documentation guide based on discussions and the above-mentioned documents. He also wrote the final document with input from James Kiaire (WHO), Mario Festin, Asa Cuzin-Kihl, Leopold Ouedraogo, and Namoudou Keita (West African Health Organization).

WHO acknowledges the continued support of the Bill and Melinda Gates Foundation to WHO's work on ensuring equitable access to quality family planning (FP) services at scale through the FP Umbrella project.

# Background

One of the five core functions of the World Health Organization (WHO) is shaping the research agenda and stimulating the generation, dissemination and application of knowledge. This function underscores the importance of knowledge for formulating health strategies at both the national and global levels for the efficient performance of health systems. WHO recognizes the importance of knowledge management methods and tools in the performance of this core function to improve effectiveness and efficiency. The WHO Regional Committee for Africa at its Fifty-sixth Session in 2006 adopted strategic directions and a related resolution on knowledge management (KM).<sup>1,2</sup> The strategic directions seek to contribute to the improvement of health systems performance and health outcomes through effective KM in health. The resolution recognizes that KM is about providing the right knowledge for the right people (i.e. policy-makers, practitioners, health systems managers and the public) and in the right format to strengthen health systems and improve health outcomes.

One of the specific objectives of the strategic directions is to maximize the impact of explicit and tacit knowledge, including health research and experiential knowledge, through effective knowledge-sharing and application. Countries are expected to benefit tremendously from exchanging experiences and hard-won solutions with one another. However, one of the significant barriers to knowledge-sharing and reapplication of experience is the limited culture of information and knowledge documentation and sharing. Although relevant knowledge may exist in people's minds, it cannot always be tapped or it may exist in formats that limit people's ability to know about it or find it. This underscores the need for decision-makers, health professionals, communities and WHO staff to be able to find, use and share knowledge on experiences of what works and lessons learned.

There are two documents guiding the documentation of best practices, which are currently used in Africa: the WHO Regional Office for Africa *Guide for documenting and sharing "best practices" in health programmes*,<sup>3</sup> and the *Guide for documenting good practice*<sup>4</sup> developed by the West African Health Organization (WAHO), Implementing Best Practices (IBP) Initiative, United States Agency for International Development (USAID) and Kreditanstalt für Wiederaufbau (KfW).<sup>5</sup> The WHO Regional Office for Africa guide was developed to disseminate a series of country experiences on the planning, implementation, and monitoring of health programmes and services that can be considered as "best practices." At the same time, the IBP Initiative has been working with WAHO to prepare and disseminate a "Good practices in public health" document<sup>4</sup> through their Good Practice Forum. The IBP Initiative's secretariat is based in the WHO's Department of Reproductive Health and Research. and currently manages a
