This project was developed by the World Health Organization (WHO) in response to the need for a model reference list of basic and priority medical devices required for cancer management, with the goal of increasing access to these medical devices especially in low- and middle-income countries. The project was developed under the overall coordination of Adriana Velazquez Berumen, Senior Advisor and Focal Point on Medical Devices from the Innovation, Access and Use unit of the Essential Medicines and Health Products Department, directed by Dr Suzanne Hill, under the Health Systems and Innovation Cluster.

Special collaboration was received from Cherian Varghese, Coordinator, and Andre Ilbawi from the Noncommunicable Diseases Management Department, as well as from James Campbell, Director, Rania Kawar, Tana Wuliji and Teena Kunjumen of Health Workforce Department in WHO.

Technical support was provided mainly by Gabriela Jimenez Moyao, WHO temporary staff in 2015-2016, and Natalia Rodriguez, intern in 2016. Additional support for the project was provided by Marina Alfons, Karin Diaconu, Mireille Goetghebeur, Antonio Migliore, and Miriam Mikhail. Final editorial review by Maurice Page and Corrado Gemma. WHO specially acknowledges May Abdel-Wahab and all staff from the Division of Human Health (NAHU) of the International Atomic Energy Agency (IAEA) for all the technical input provided.

The primary financial support for this study was provided by the OPEC Fund for International Development (OFID). WHO acknowledges and is most grateful to all the participants of the meetings and consultations, the Steering Committee members and the experts who provided advice in the development of this document, as follows:
