Preface

Many countries are making efforts to improve and increase population coverage with medical imaging, and among them are the countries of the World Health Organization Eastern Mediterranean Region. Unfortunately, diagnostic imaging is still among the least developed of the branches in health care systems in the Region. The WHO Regional Office for the Eastern Mediterranean continues to support countries to develop, adapt and integrate appropriate technologies for medical imaging. The promotion of the quality of the radiographic and protection aspects of medical imaging are among the priorities of the Regional Office.

This publication aims to cover some of the needs and demands of medical imaging services in many countries. It outlines principles for appropriate medical imaging and contains guidelines, checklists as well as two annexes designed to assist medical imaging centres in self-assessment of their own performance.

The authors would like to express their gratitude and appreciation to Dr Hussein A. Gezairy, WHO Regional Director for the Eastern Mediterranean, and to Dr M.H. Khayat, Deputy Regional Director for the Eastern Mediterranean, for their support.

Part I

Implementation and Monitoring of Quality Systems
