

# Research Priorities for Helminth Infections

---

Technical Report of the TDR Disease Reference Group on  
Helminth Infections

World Health  
Organization

The World Health Organization was established in 1948 as a specialized agency of the United Nations serving as the directing and coordinating authority for international health matters and public health. One of WHO's constitutional functions is to provide objective and reliable information and advice in the field of human health, a responsibility that it fulfils in part through its extensive programme of publications. The Organization seeks through its publications to support national health strategies and address the most pressing public health concerns of populations around the world. To respond to the needs of Member States at all levels of development, WHO publishes practical manuals, handbooks and training material for specific categories of health workers; internationally applicable guidelines and standards; reviews and analyses of health policies, programmes and research; and state-of-the-art consensus reports that offer technical advice and recommendations for decision-makers. These books are closely tied to the Organization's priority activities, encompassing disease prevention and control, the development of equitable health systems based on primary health care, and health promotion for individuals and communities. Progress towards better health for all also demands the global dissemination and exchange of information that draws on the knowledge and experience of all WHO's Member Countries and the collaboration of world leaders in public health and the biomedical sciences. To ensure the widest possible availability of authoritative information and guidance on health matters, WHO secures the broad international distribution of its publications and encourages their translation and adaptation. By helping to promote and protect health and prevent and control disease throughout the world, WHO's books contribute to achieving the Organization's principal objective – the attainment by all people of the highest possible level of health.

The WHO Technical Report Series makes available the findings of various international groups of experts that provide WHO with the latest scientific and technical advice on a broad range of medical and public health subjects. Members of such expert groups serve without remuneration in their personal capacities rather than as representatives of governments or other bodies; their views do not necessarily reflect the decisions or the stated policy of WHO. An annual subscription to this series, comprising four to six such reports, costs CHF 150.00/US\$ 180.00 (CHF 105.00/US\$ 126.00 in developing countries). For further information, please contact: WHO Press, World Health Organization, 20 Avenue Appia, 1211 Geneva 27, Switzerland (tel. +41 22 791 3264; fax: +41 22 791 4857; e-mail: [bookorders@who.int](mailto:bookorders@who.int); order on line: <http://www.who.int/bookorders>).

All rights reserved. Publications of the World Health Organization are available on the WHO web site ([www.who.int](http://www.who.int)) or can be purchased from WHO Press, World Health Organization, 20 Avenue Appia, 1211 Geneva 27, Switzerland (tel.: +41 22 791 3264; fax: +41 22 791 4857; e-mail: [bookorders@who.int](mailto:bookorders@who.int)).

Requests for permission to reproduce or translate WHO publications – whether for sale or for noncommercial distribution – should be addressed to WHO Press through the WHO web site ([http://www.who.int/about/licensing/copyright\\_form/en/index.html](http://www.who.int/about/licensing/copyright_form/en/index.html)).

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted lines on maps represent approximate border lines for which there may not yet be full agreement.

The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by the World Health Organization in preference to others of a similar nature that are not mentioned. Errors and omissions excepted, the names of proprietary products are distinguished by initial capital letters.

All reasonable precautions have been taken by the World Health Organization to verify the information contained in this publication. However, the published material is being distributed without warranty of any kind, either expressed or implied. The responsibility for the interpretation and use of the material lies with the reader. In no event shall the World Health Organization be liable for damages arising from its use.

This publication contains the collective views of an international group of experts and does not necessarily represent the decisions or the policies of the World Health Organization.

# Contents

<b>The TDR Disease Reference Group on Helminth Infections</b>	vii
<b>Acronyms and abbreviations</b>	ix
<b>List of species</b>	xiii
<b>Executive summary</b>	xv
<b>1. Introduction</b>	1
1.1 The problem of helminthiases	1
1.2 Human helminthiases, populations at risk and resulting diseases	6
1.3 Group membership	12
1.4 Host country	14
1.5 Think Tank members	14
<b>2. Methodology and prioritization</b>	15
2.1 Identification of the helminth infections to be considered	15
2.2 Identification of the research gaps to be considered	16
2.3 The first DRG4 meeting	17
2.4 Prioritization of themes	19
2.4.1 Underlying values	19
2.4.2 Criteria for ranking	19
2.5 The second DRG4 meeting	20
2.6 Ranking of priority research areas by experts in DRG4	20
2.7 Stakeholders consultation meetings and other external contributions	21
2.7.1 First stakeholders' consultation	21
2.7.2 Second stakeholders' consultation	21
2.8 Publication of the DRG4 report	22
<b>3. Overview of trends and driving forces of persistent, emerging and re-emerging helminth infections and the consequent research and control challenges</b>	23
3.1 Parasite population biology and human host sociological factors	23
3.2 Chemotherapeutic factors	24
3.3 Factors associated with current ability to diagnose helminth infections in individuals, communities and larger spatial scales	25
3.4 Factors associated with the environmental and social ecology of human helminthiases	27
3.5 Factors associated with research gaps in basic helminth biology	28
<b>4. Overview of significant recent advances for the control and elimination of helminth infections and deeper analysis of control challenges and research issues for helminth diseases</b>	31
4.1 Advances in interventions and their monitoring and evaluation	31
4.2 Analysis of the tools for control interventions	34
4.2.1 Anthelmintic pharmaceuticals and their modalities of delivery	34
4.2.2 Efficacy of anthelmintics	40
4.2.3 Anthelmintic resistance	40

4.2.4	Combinations of anthelmintics	44
4.2.5	Vector control	46
4.2.6	Vaccines	47
4.3	Advances in tools for diagnosis of infection and surveillance of interventions	48
4.4	Analysis of the tools for diagnosis, monitoring and evaluation, and surveillance and their challenges	48
4.4.1	Diagnostics for filariases	52
4.4.2	Diagnostics for soil-transmitted helminthiases	57
4.4.3	Diagnostics for schistosomiasis (including infections by <i>Schistosoma mansoni</i> , <i>S. haematobium</i> and <i>S. japonicum</i> )	60
4.4.4	Diagnostics for taeniasis ( <i>Taenia solium</i> /cysticercosis)	63
4.5	Issues related to bringing new diagnostics to market	65
4.6	Advances in mathematical modelling of helminth infections	67
4.7	Advances in the understanding of pathology and assessment of morbidity	68
4.8	Analysis of the challenges for epidemiological data and mathematical models	72
4.8.1	Transmission thresholds	72
4.8.2	Parasite population biology factors	72
4.8.3	Co-infections, multiple populations, and niche-shifts	74
4.8.4	Infection and disease mapping	74
4.8.5	Morbidity control vs. elimination	74
4.8.6	Transition from endemic to post-control parasite biology and ecology	75
4.9	Advances in helminth biology	76
4.9.1	Parasite genomics and functional genomics	76
4.9.2	Transmission biology	79
4.9.3	Immunology	79
4.9.4	Host-parasite interaction and pathology	81
4.9.5	Vector-filaria and snail-schistosome interactions	83
4.10	Analysis of challenges stemming from gaps in knowledge of basic helminth biology	85
4.10.1	Host-parasite interaction and immunopathology	85
4.10.2	Other aspects of basic biology	89
4.10.3	Vector-filaria and snail-trematode interactions	92
<b>5.</b>	<b>Intersectoral and cross-cutting issues</b>	<b>95</b>
5.1	Cross-cutting issues of participation, ownership, empowerment, equity and gender	95
5.2	The impact of global climate change	96
5.3	Challenges stemming from environmental and social ecology factors: water-associated diseases and water management	97
5.4	Limitations in the health services	97
5.5	Polyparasitism and integration of intervention measures	98
<b>6.</b>	<b>Regional highlights and research capacity</b>	<b>101</b>
6.1	Regional highlights	101
6.2	Research capacity	102
6.2.1	Background	102
6.2.2	Inequalities in research capacity	103
6.2.3	Research capacity in disease-endemic countries	104
6.2.4	Challenges for research capacity building in disease-endemic countries	107
6.2.5	National, regional, and global efforts and strategies towards capacity building for research in infectious diseases of poverty	111

<b>7. Regional and national policies on research and their implications</b>	115
7.1 Background	115
7.2 Regional health research policies	115
7.3 National health research policies	116
7.4 Recommendations	117
<b>8. Research priority recommendations to policy and decision-makers</b>	119
8.1 Intervention	120
8.2 Epidemiology and surveillance	120
8.3 Environment and social ecology	121
8.4 Data and modelling	121
8.5 Biology research	122
<b>9. Conclusions</b>	123
<b>Acknowledgements</b>	125
<b>References</b>	127
<b>Annex 1</b>	
The TDR disease and thematic reference groups Think Tank for Infectious Diseases of Poverty, and host countries	155
<b>Annex 2</b>	
Membership of the Disease Reference Group on Helminth Infections (DRG4)	157
<b>Annex 3</b>	
Composition of the Think Tank	159
<b>Annex 4</b>	
Distribution of the Think Tank leadership (co-Chairs)	167
<b>Annex 5</b>	
The top ten research priority areas for helminthiases recommended by DRG4	169
<b>Annex 6</b>	
Research landmarks and their projected impacts on the helminthiases in the short, mid and long-term periods	173
