Executive Summary	1
Chapter 1. Introduction	4
Benefits of investing in early childhood care and development programmes	4
Benefits of investing in programmes to improve child physical growth	5
Benefits of investing in programmes that combine ECCD and nutrition interventions	5
Interaction at three critical points	5
The child	6
The child and family	6
Design and delivery of programmes	6
Questions to be addressed by the review	6
Chapter 2. Background and methodology for the review	8
Measuring impact: the selection of outcomes measures	8
Outcomes related to child development	8
Long-term measures of individual outcomes	9
Outcomes related to child growth	9
Theoretical background for the review	10
Steps or process by which interventions are developed	11
Dimensions of research rigor to consider in evaluating interventions	11
Degree of control: adequacy of delivery and evaluation design	12
Context and conditions of the intervention	13
Level of intervention: where in the causal pathway does the intervention occur?	13
Chapter 3. Interventions to support psychological development	15
Impact of ECCD interventions on psychological development	15
Child-focused interventions that provide psychosocial stimulation directly to the child	16
Parent-focused interventions to improve parenting skills and psychosocial stimulation in the home environment	17
Joint-focused interventions to improve parenting skills, and to provide psychosocial stimulation to children and supportive services to parents	18
Effectiveness of ECCD programmes	19
Impact of nutrition interventions on psychological development	20
Improving nutrition through supplementary feeding	20
Mechanisms for effects of malnutrition on development	20

Timing and duration of supplementation	21
Activity levels and behavioural responsiveness	21
Issues in defining mechanisms	22
Rehabilitation of severely undernourished children	22
Correction of micronutrient deficiencies	23
Iodine	23
Iron	24
Zinc	25
Other micronutrients	25
Effects of breastfeeding on psychological development	25
Nutrition education and growth promotion	26
Chapter 4. Interventions to support physical growth	27
Impact of nutrition interventions on physical growth	27
Supplementary feeding of pregnant and lactating women	27
Supplementary feeding programmes for children less than 5 years	28
Community-based efficacy trials	28
Food supplementation programmes	29
Rehabilitation and feeding of undernourished children	29
Correction of micronutrient deficiencies	29
Iodine	30
Iron	30
Vitamin A	30
Zinc	31
Nutrition education to improve breastfeeding and complementary feeding	32
Nutrition education and physical growth	32
Nutrition education and feeding practices	33
Production of complementary foods for young children	33
Physical growth monitoring and promotion	34
Impact of other types of interventions on physical growth	35
Interventions to control disease	35
Improved water and sanitation	35
Control of disease through medical services and immunization	35
Interventions to increase maternal education	36
Interventions to increase household food security	36
Food subsidies	36
Food for work	36
Agricultural production	36
Credit programmes	37
Effectiveness of nutrition programmes	37
Chapter 5. Combined physical growth and psychological development interventions	39
Efficacy trials of combined physical growth and psychological development interventions	39
Cali, Colombia	39

CONTENTS

Bogota, Colombia	40
The Jamaica Study	41
A combined intervention for severely malnourished children	43
A combined intervention for children with non-organic failure-to-thrive (NOFTT)	43
Summary of evidence for combined effects from efficacy trials	44
Effectiveness evaluations of combined physical growth and psychological development programmes	44
Summary of additive effects from effectiveness and efficacy trials	45
Levels where interventions have an additive effect	45
The child	45
The child and family	46
Design and delivery of programmes	46
Implications for models of combined programmes	46
Programmes that provide centre-based pre-school education plus feeding	48
Programmes that provide food and stimulation to children, and education on nutrition and responsive parenting for parents	49
Programmes that combine nutrition and education on responsive parenting	49
Other approaches	50
Programmatic issues	52
Potential programmatic advantages	52
Delivering interventions to those who are most likely to benefit	52
ECCD as an entry point and/or motivating factor for programme participation	53
Co-ordination of messages, materials and approaches	53
Potential operational constraints to combined programmes	54
Chapter 6. Summary, conclusions and recommendations	56
Purpose of the review	56
Key questions addressed by the review	56
To what extent and through what means can psychological functioning be improved for children living in disadvantaged environments?	56
To what extent and through what means can child physical growth be improved in settings where chronic undernutrition is prevalent?	57
To what extent and through what means can nutrition and psychological development be improved simultaneously through combined health, nutrition, and psychosocial interventions?	58
Are there effective models for combined interventions, and are these models feasible for implementation on a public health scale?	58
Examples of programme models that can incorporate nutrition, health and psychosocial components	59
Conclusions	59
Recommendations	60
Annex. Seven Programme Models	62
1. Integrated Child Development Services (ICDS), India	62
2. Head Start, U.S.A	63

	3. PANDAI (Child Development & Mother's Care) Project, Indonesia	64
	4. PRONOEI, Peru	65
	5. Programa de Alimentacao de Pre-escolar (PROAPE), Brazil	66
	6. Hogares Comunitarios de Bienestar (Homes of Well-Being), Columbia	67
	7. Integrated Programme for Child and Family Development (IFBECD), and Family Development Programme (FCP), Thailand	68

Acknowledgements

The authors of this review were Dr Gretel Peltó (Cornell University), Ms Katherine Dickin (Cornell University), and Dr Patrice Engle (California Polytechnic State University, San Luis Obispo). Each has taken major responsibility for this project at its various stages.

The helpful suggestions and contributions to sections of the document by the following people are gratefully acknowledged: Dr Jean-Pierre Habicht (Cornell University), Dr David Pelletier (Cornell University), Dr Maureen Black (University of Maryland, Baltimore), Dr Mercedes de Onis (WHO), Dr Ernesto Pollitt (University of California, Davis), Dr Lida Lhotska (UNICEF New York), and Dr Linda Richter (University of Natal, South Africa). Also appreciated are the efforts of Ms Maria Blaze-Kabitzer in checking the references.

Valuable assistance in reviewing the paper was provided by Dr Jane Lucas and Dr José Martines in the working group on Family and Community Practices in the WHO Department of Child and Adolescent Health and Development. The special contributions of Mandy Mikulencak's editing and Sue Hobbs' design are evident in the final document.
